

## HOUSING MARKET ANALYSIS

### General

The weak underpinnings of the national economy which began in the second quarter of 2007, brought on largely by the fall of the housing market, continue to impact the economy of Maryland. Maryland, which saw one of the highest growth rates in real property value during the housing boom, is reeling from the pull back in the housing market as home values continue to fall amid ongoing growth in foreclosures.

This section reviews data and literature on Maryland economy and the State's housing market during the 2005 to 2009 period. The housing market analysis will include owner occupied housing, foreclosures, housing stock/construction, home sales, housing affordability and workforce housing shortage in the state.

## MARYLAND ECONOMY

Maryland's population totaled 5.7 million people in December 2009 and it is ranked the 19<sup>th</sup> highest in the U.S. – the same ranking it has held since the 1970s. The State's population has grown 2.1 percent from 5.6 million in 2005, below the national growth rate of 4.0 percent during the same period. According to the Maryland Department of Planning (OP), population growth in Maryland usually outpaced the national growth rate but it slowed in the period April 2000 to July 2009, the first time in almost three decades. In a study done by OP entitled "Maryland's Population Growth Slowest in 28 Years" it finds that, continued substantial loss from net domestic migration is a major factor behind this period of slow growth. However, with Maryland expected to benefit from military relocations mandated by the Base Realignment and Closure (BRAC) enacted in 2005 and expected to take effect in 2011, this trend may likely reverse in the next three to five years.

With close proximity to the nation's capital and federal employment, Maryland residents benefit from this source of stable employment in addition to state and private sector employment. As a result of this buffer from federal government employment, unemployment rates in Maryland have consistently remained below the national rate. Even with the on-going recession in the national economy which began in late 2007, employment in Maryland stayed relatively strong. In 2009, the national unemployment rate ended the year with 9.2 percent compared with 6.9 percent for Maryland. This trend is evident in the unemployment growth rate from 2005 to 2009 where the national rate increased 4.1 percent compared with 2.8 percent for Maryland during the same time period. This relatively lower rate in unemployment continues to serve as a boost for income tax collection for Maryland when compared with much higher unemployment levels in other states.

Median household incomes in Maryland persistently outpace the national average. According to data from Moody's Economy.com, median household income in Maryland remained among the top ten in the nation between 2005 and 2009. In 2005, the median household income stood at \$60,512 compared with a national median income of \$46,326. In 2009, the median household income averaged \$62,771 compared with a national average of \$50,341. Despite the existing gap between the median income in Maryland and the national median income from 2005 to 2009, the growth rate is much lower at 4.0 percent in Maryland compared with a national growth

rate of 8.7 percent.

## The Housing Market

The housing market in Maryland has gone through major changes from 2005 to 2009. In 2005, the housing market was on an upward trend with higher median home prices, soaring home sales and increases in new home construction. During this period, financial institutions also relaxed qualifications for loan approvals as consumers flocked to the market driving up home ownership across the state. However, in 2006, home prices began to flatten and then began dropping in the later part of 2007. By the summer of 2008, the problems in the housing market involved more than falling home prices. More home owners with variable interest rates that reset with higher rates could no longer afford their mortgages. As a result, delinquencies in mortgage payments increased leading to higher foreclosure activity in Maryland and throughout the U.S. by the end of 2009.

The following housing market analysis will highlight changes in the components of the housing market in Maryland from 2005 to 2009:

- Owner Occupied Housing and Equity Growth
- Home Foreclosures
- Housing Stock/Construction/Completions
- Home Sales and Inventory
- Housing Affordability
- Workforce Housing Shortage

### Owner Occupied Housing and Equity Growth

Even with the fall out in the Maryland housing market, the housing market remained relatively steady but soft with a modest increase in overall owner occupied housing units. From 2005 to 2009, the number of owner occupied housing units in Maryland inched up 1.0 percentage point to 1,453,836 in 2009. The largest increase was recorded in Wicomico County where the number of housing units grew 7.7 percent to 23,914 units in 2009. Other counties with more than 1.0 percentage growth in units include Harford (7.3 percent), Montgomery (6.5 percent), Cecil (5.8 percent), Charles (4.1 percent), Kent (4.0 percent), Prince George's (2.1 percent), Calvert (2.1 percent) and Baltimore City (1.3 percent). Baltimore County showed the highest decline of -4.8 percent in housing units, followed by declines in Allegany County (-4.2 percent), Washington County (-3.3 percent), Anne Arundel County (-2.9 percent), Somerset County (-2.6 percent), Caroline County (-2.2 percent), Queen Anne's County (-2.1 percent), Garrett, Talbot and Worcester counties (-1.9 percent each) and Dorchester County (-1.6 percent). All other counties showed less than 1.0 percent increase or decrease in housing units from 2005 to 2009.

The modest growth rate in the number of owner occupied housing units from 2005 to 2009 can be attributed to the expansion of homeownership in Maryland during the housing boom from 2005 to 2007. During this period, lenders were flexible in extending loans to home owners with little or no down payment required to qualify for loans. With more homeowners qualifying for loans, the number of owner occupied units in Maryland continued to grow.

The rapid appreciation of home prices in Maryland substantially increased the average equity wealth of homeowners from 2002 to 2005 by more than \$200 billion in Maryland, representing a growth of more than \$100,000 per homeowner household. However, with the precipitous fall in home prices starting from late 2007 coupled with increased foreclosure activity in the state, the owner occupied home equity wealth declined by an estimated \$52.7 billion in Maryland, representing an equity decline of \$36,166 per homeowner from 2005 to 2009. The largest decline by county was in Prince George's County with a \$13.6 billion drop in home equity followed by Montgomery County (-\$10.6 billion), Anne Arundel County (-\$8.5 billion) and Baltimore County (-\$6.0 billion).

## Home Foreclosures in Maryland Counties

With continuing weakness in the national economy coupled with increased and prolonged periods of unemployment home foreclosures have taken a center stage in both the national and the Maryland economies.

In 2009, RealtyTrac reported a total of 43,248 Maryland properties with foreclosure filings up 133.7 percent over the previous year. The state's overall foreclosure rate in 2009 was 54 housing units per filing, ranking the state 13<sup>th</sup> highest nationwide. However, as shown in Exhibit 2, the annual rate of growth of foreclosure filings has declined significantly in 2009, down 37.6 percentage points from the 2008 growth rate of 171.3 percent and 476.5 percentage points below the 2007 performance.

**Exhibit 2. Properties with Foreclosure Filings in Maryland 2007-09**

Source: RealtyTrac

Exhibit 3 summarizes the year-end data for Maryland jurisdictions. Prince George's County recorded 13,412 filings for 2009, or 31.0 percent of the statewide foreclosures, while accounting for only 13.8 percent of the overall housing units in Maryland. The County with a foreclosure rate of 24 housing units per foreclosure also had the highest concentration of foreclosures in Maryland. Montgomery County with 6,614 filings (15.3 percent of the total) had the second highest number of foreclosures in 2009 while representing 15.6 percent of the housing units. Baltimore City with 5,067 foreclosure filings (11.7 percent of the total) had the third highest number of foreclosures. The City accounted for 12.7 percent of housing units in Maryland. Baltimore County was fourth with 3,459 filings (8.0 percent) followed by Anne Arundel County with 2,765 filings (6.4 percent) and Frederick County with 2,305 filings (5.3 percent). Baltimore County accounts for 14.1 percent of the housing units in Maryland while Anne Arundel and Frederick counties make up 8.7 percent and 3.7 percent of the housing units respectively.

in 2007 reaching a low of 46,834 units in 2008. In 2009, total home sales increased to 52,591 units statewide according to data from the Maryland Association of Realtors. From 2005 to 2009, total home sales decreased 46.8 percent as the state continue to reel from the troubles in the housing market.

Most notable percentage declines were in Somerset County (-60.5 percent) Talbot County (-57.0 percent), Queen Anne's and Charles counties (-56.3 percent each), Caroline County (-55.0 percent) and Baltimore City (-54.9 percent). However, in looking at significant declines by number of units, the largest decline in units sold were in Prince George's County (8,039 units) Montgomery County (6,640 units), Baltimore City (6,333 units), Baltimore County (5,155 units) and Anne Arundel County (4,220 units). When compared with levels in 2008, unit sales increased by 12.1 percent statewide.

In Maryland, inventory levels increased by 140.0 percent or 305,086 units from 2005 to 522,652 units in 2009. The significant increase can be attributed to the slowing housing market, inventory build-up from the "boom days" and the shadow inventory caused by foreclosures. Within the state, significant percentage increases were in Prince George's County (318.8 percent), Worcester County (173.2 percent), Charles County (171.7 percent), Baltimore County (162.3 percent) and Baltimore City (159.0 percent). Unit wise, the five largest unit increases were in the following counties: Prince George's (58,112 units), Baltimore City (39,311 units), Baltimore (32,023 units), Montgomery (30,682 units) and Anne Arundel (26,516 units). The smallest unit increases in inventory from 2005 to 2009 were in the following counties: Somerset (1,722 units), Caroline (1,732 units) and Kent (1,862 units).

### Homeownership Affordability Indices

The housing affordability index measures the ability of a typical family to qualify for a mortgage loan on a typical home. A typical family is defined as one earning the median household income, and a typical home is defined as the median priced existing single-family home. The affordability indices are developed for both repeat and first-time homebuyers.

The Maryland Repeat Homebuyer Housing Affordability Index is defined as the ratio of median household income to the required income to qualify for a loan on a median priced existing single family home. Qualifying income is assumed to be dependent on housing prices, prevailing mortgage interest rates, mortgage terms and lending requirements. The prevailing mortgage interest rate used for the computation of the Index is the weekly effective rate for the northeast region as reported by Freddie Mac in its Primary Mortgage Market Survey. The mortgage term is based on a 30-year fixed rate loan with a down-payment equal to 20.0 percent of the home price. Finally, the lending requirements used as the qualifying criteria for the calculation of the index are those set by the Federal National Mortgage Association assuming a qualifying ratio of 25.0 percent, i.e., the monthly principle and interest payment cannot exceed 25.0 percent of the median household monthly income.

The Maryland First Time Homebuyer Housing Affordability Index measures housing affordability for first time homebuyers using assumptions that are modified from the repeat buyer affordability index. These modified assumptions take into account potential differences for the first time homebuyers with respect to median household income, home prices, down payments and loans as compared to the repeat homebuyers. First, similar to the National Association of Realtors, we assumed that the median household income of first time homebuyers is 35.0 percent lower than

that for all households. Second, the first time homebuyers purchase less expensive homes than repeat buyers. We assumed that on average, median purchase prices for first time homebuyers are about 85.0 percent of the overall median home prices. Third, first time homebuyers make smaller down payments than repeat homebuyers. On average, the down payment for first time homebuyers is about 10.0 percent as compared to the 20.0 percent for repeat buyers. Finally, a smaller down payment results in a more expensive loan for the first time homebuyer because of the added assessed private mortgage insurance.

The Maryland Homeownership Affordability Indices for repeat and first-time homebuyers provide a structure within which housing affordability in Maryland counties and Baltimore City can be tracked over time. In general, a housing affordability index with a value of 100 portrays a household with the exact median income to qualify for a mortgage on a median priced home. By comparison, an index with a value above 100 signifies a household with more than enough income to qualify for a mortgage loan on a median priced home. On the other hand, an index with a value of less than 100 implies that the family does not have enough income to qualify for a mortgage loan on a median priced home.

The Homeownership affordability index in Maryland improved significantly from 87 in 2005 to 142 in 2009 as shown in Exhibit 8. The improvement in the index can be attributed to three major factors: (1) lower median home prices (2) lower mortgage interest rates and (3) higher and stable median income during this period. From 2005 to 2009, the median home prices statewide declined 19.5 percent from \$311,914 in 2005 to \$251,114 in 2009 allowing residents to be able to afford homes that were otherwise priced outside their affordability range. Contributing to the current improvement in affordability indices is the sustained lower interest rate environment for homebuyers. The effective interest rate (defined as the rate that account for variations in fees and points) at the end of December 2009 was 4.99 percent in the U.S. and 5.13 percent in Maryland – one of the lowest levels since December 2005. Also, higher average median household income in the state has allowed for a favorable index in the housing market in 2009.

According to data from Moody's Economy.com, median household income statewide ranked 2<sup>nd</sup> highest in the U.S. in 2005 (\$60,512), 2006 (\$63,668) and 2007 (\$65,630) but declined 2.9 percent to \$63,711 in 2008 and 1.5 percent in 2009 to \$62,711. Despite the slight fall in median income in 2008 and 2009, the median income in Maryland consistently remained more than twenty percent above the national median income from 2005 to 2009. Also, it is worthy to note that sixty percent of the counties in Maryland have median household incomes higher than the national average in 2009. In 2009, the Maryland affordability index for repeat buyers was 142, suggesting that a typical repeat buyer can afford a house that is 42.0 percent more expensive than a median priced home. The 2009 Maryland affordability index for first-time buyers stood at 91, suggesting that the typical first-time buyer could only afford homes that are priced at least 10.0 percent below the median price of a starter home.

## **Workforce Affordable Rental Housing Shortage in Maryland**

Maryland continues to experience acute shortage of workforce affordable rental housing for families, seniors and individuals with disabilities in Maryland. This shortage has become more concentrated among the low-income renter households despite improvements in income and housing conditions across a broad range of income groups in the past decade. Statewide, household income grew from an average of \$36,016 in 1990 to \$52,310 in 2000, an increase of 45.0 percent. The growth of household income was widespread throughout Maryland, ranging from a low of 25.0 percent for Baltimore City to a high of 47.0 percent for Worcester County. This impressive growth in income, however, did not bring a significant reduction in the share of low-income renter households with housing problems.

During the 1990-2000 period, the share of Maryland households with severe rent burden declined by only 2.0 percent among households with 0-30 percent of the Area Median Income (AMI). The same share declined by 8 percent among households with 31-50 percent of the AMI, and by only 1.0 percent for households in the 51-80 percent of the AMI group. Among households with incomes below 30.0 percent of the AMI, 70.0 percent reported at least one housing problem in 2000, while 54.0 percent paid more than 50.0 percent of their income for rent and utilities. The corresponding figures for households with incomes between 31-50 percent of the AMI are 68.0 percent and 13.0 percent respectively. Finally, 32.0 percent of the families earning between 51-80 percent of the AMI reported at least one housing problem, while 2.0 percent indicated severe housing problems. In Worcester County, 54.8 percent of the low income households are cost burdened, the lowest rate, while in Montgomery County, 74.2 percent are cost burdened, the highest rate. About 34.3 percent of Garrett County's low income households are severely cost burdened, the lowest rate, compared to Montgomery County's 60.4 percent, the highest rate.

In addition to the size and variation of household income overtime, the affordability problem depends on the supply side of the rental market, i.e., higher rates of growth in median rent and the slow growth of multi-family residential structures. The rental housing supply, in turn, can be measured by units affordable and available to a specific income threshold. Data from the 2000 Census show that about 87 rental-housing units were affordable for every 100 low-income renter households in Maryland. This represents a shortage of 13 units per 100 renter households. However, many units, nominally affordable to specific income groups, are occupied by higher income households. In 1990 and in 2000 alike, about 46.0 percent of the affordable units, or 40 units per 100 low-income renters, were occupied by higher income renter households. As a result, there were only 47 affordable and available rental units per 100 low-income renter households in Maryland.

With varying median household income across the state, the use of a single statewide affordability threshold may distort the analysis as it represents a different share of the local median income. For example, in 2009, the statewide median household income threshold (50 percent), as reported by the U.S. Census Bureau, was \$31,385. This threshold represents only 35.0 percent of the median household income in Howard County and 38.0 percent in Montgomery and Calvert counties respectively. The corresponding figure for neighboring Baltimore County and Baltimore City are 57.0 percent and 93.0 percent respectively. Thus, to account for these variations, this study estimates the magnitude of the rental housing shortage in Maryland by utilizing a different income threshold for each county. These local income thresholds are equivalent to 50.0 percent of each county's median household income.

To estimate the shortage of affordable housing for the state's senior households, the elderly population had to be converted into elderly households. Our conversion technique is based on the Census distribution of families (ranging in size from one person to four or more persons) headed by an individual 65 years and older. According to the 2000 Census, about 68.3 percent of senior families consist of one person, 26.0 percent consist of two persons, and the remaining 5.7 percent consist of three or more individuals.

The disabled households are defined as families with one or more disabled individuals where disability, as defined by the 2000 Census, is a condition that makes it difficult for a person to do activities such as walking, climbing stairs, dressing, bathing, learning, or remembering. The data include non-institutionalized individuals over five years of age who live in households and group quarters such as college dormitories, military quarters, and group homes. The disabled individuals (including the elderly disabled) are converted to the disabled households using an average household size of about 2.2 persons per family.

Baseline shortage of workforce affordable rental units for 2000 are based on the number of low income families, elderly and disabled households compared to the number of workforce affordable rental units available to them. The shortage projections for 2015 are based on the forecast of population growth. On average, the number of low-income families and the disabled households will grow by about 0.8 percent a year during the projection period. The corresponding figure for senior households is 2.0 percent a year.

In 2000, Maryland had a deficit of about 125,000 affordable and available rental units. The housing shortage was projected to grow 25.0 percent to a high of 157,000 in 2014. However, with consolidated effort by different state agencies from 2005 through 2009 to address housing shortage, the 2015 housing shortage is projected to reach 130,315 units by 2015 as shown in Exhibit 9. Our projections assume no new workforce affordable rental housing production by Maryland Department of Housing and Community Development (DHCD) beyond 2009. This allows us to estimate the impact of various production scenarios and policy options on the projected deficit. According to our analysis, low-income family units account for the bulk of the projected deficit (80,349 units or 62.0 percent of the total), followed by units accessible to individuals with disabilities (28,993 or 22.0 percent), and the elderly units (20,973 or 16 percent). Based on an estimated cost per unit of about \$175,999 and incorporating future inflation, the estimated production cost of meeting the expected 130,315 shortage of units over the next ten years is approximately \$23.6 billion.

Montgomery County with 34,967 units has the largest projected shortage, followed by Prince George's County (24,482 units), Baltimore County (19,671 units), Anne Arundel County (12,038 units), Howard County (8,271 units), and Baltimore City (6,850 units). With the exception of Calvert, Allegany and Garrett counties, the following jurisdictions with the smallest projected shortage (less than 1,000 units) are located on the Eastern Shore of Maryland and include Dorchester, Somerset, Caroline, Kent, Queen Anne, Wicomico, Worcester and Talbot counties.

**Exhibit 9. Projected Shortage of Workforce Affordable and Available Rental Housing in Maryland Jurisdictions 2015**

### Inventory Conditions

According to the 2000 census, there are about 2,145,283 million year-round housing units in Maryland. About 1,341,592 of these units are owner-occupied units, and about 639,265 were renter occupied units. Of the remaining units, 2.3 percent were rental units available for rent, 1 percent were units for sale, and 7.3 percent were "other" which is comprised overwhelmingly of

rental or owner-occupied units which are under rental or purchase contracts but where the household has not yet taken possession of the unit.

Almost half (48.2 percent) of all owner-occupied units had three bedrooms, 27.2% had four bedrooms, and 7.3 percent had five or more bedrooms. By contrast, rental units tended to be primarily two-bedroom units, which represented 36.7 percent of the rental stock. The table below provides a profile of housing units by owner versus rental status:

#### *Housing in Standard Condition and Substandard Condition but suitable for Rehabilitation*

HUD also asks grantees to define housing that is in Standard Condition, as well as Substandard condition but suitable for rehabilitation. For the purposes of the Plan, we use the following definitions:

- "Standard Condition" - A housing unit in "standard condition" meets all applicable code requirements and has all of its major systems in working order.
- "Substandard Condition but suitable for rehabilitation" - A unit which is "substandard but suitable for rehabilitation" is any unit which has at least one or more major systems which is not in working order and/or has health and safety problems, any of which can be remedied in a manner that is both economically feasible and meets livability code requirements.

HUD requires grantees to report on housing units it believes to be substandard. DHCD estimates there may be about 357,000 substandard units in Maryland. This estimate is based on the number of units lacking complete kitchens or plumbing, and units that are overcrowded, as well as housing units built in 1939 or earlier. Obviously, not all unit built prior to 1939 are substandard. However, most of these housing units would have lead paint problems. In addition, since no post 1939 housing units are identified as substandard, although some would be, we think this numbers represents a fairly good "best guess" proxy of substandard units.

## The Assisted Housing Inventory

DHCD, HUD, the Farmer's Home Administration, the Appalachian Regional Commission, and local towns, cities and counties through Public Housing Authorities or nonprofit corporations such as the Housing Opportunities Commission all finance rental housing for low- and moderate-income households. A list of the projects in the inventory can be found in **Appendix II**.

Beginning with its first multi-family mortgage insurance closing in 1975, both the Division of Housing Finance (CDA) and the Division of Credit Assurance (MHF) have had a substantial portfolio of projects subsidized by federal Section 8 rental assistance contracts or Section 236 interest rate reduction subsidies. Forty percent of all MHF insured projects and 32 percent of all insured units receive one or both of these federal subsidies. These federal programs require that projects remain restricted for occupancy by low-income tenants, with the owner's cash flow and return on equity limited during a certain time, usually 15 years. Recently, the use restrictions on the units have begun to expire. Owners now have the ability to discontinue receipt of the federal subsidy payments and sell the properties as market rate rental housing, realizing the substantial appreciation that may have accrued over the years. If owners sell these properties, significant numbers of low-income families will be displaced and affordable rental units will be permanently lost to the State housing stock. Replacement of these units is far more expensive than finding ways to preserve their continued use as affordable housing.

Another challenge to maintaining the assisted housing inventory is the potential loss of low-income housing units financed during the mid-1980s using Federal Low-Income Housing Tax Credits. Generally, those units were financed with a 15-year affordability restriction. The first projects financed with tax credits will have met their 15-year limit beginning in 2002.

CDA serves as the State's clearinghouse for assisted housing preservation activities. Notices of Intent required to be filed on federal projects are catalogued here and both non-profit and for-profit developers register with the Secretary of DHCD to be notified of possible purchase opportunities. In addition, Maryland enacted the Assisted Housing Preservation Act in 1989 which is intended to preserve assisted housing for low-income renters.

### Public Housing Authorities

There are 17 Public Housing Authorities (PHAs) located in Maryland's non-entitlement jurisdictions, of which DHCD is one. PHAs can manage physical units, Section 8 Vouchers (which are not attached to physical units) or both. The PHAs that fall under the State Plan operate a total of 1,404 physical units and 7,609 Vouchers, an increase over the 1,372 physical units and 7,232 Vouchers these PHAs operated five years ago, or an increase of 409 households assisted. Overall, the State's PHAs operate 20,506 physical units and 47,987 Vouchers. This represents a decrease in physical units from 22,545 five years ago, but an increase in Vouchers from 44,258, for an overall increase in households receiving public housing assistance of 2,450 households statewide.

As part of the Consolidated Plan, HUD asks DHCD to report on the physical assessment scores of units that have been evaluated by HUD's Office of Public and Indian Housing. The scores, where available, are noted below. Performers with a rating of 90 or above are considered high

performers. Two PHAs in the non-entitlement jurisdictions are considered substandard performers – Saint Michael's Housing Authority and Wicomico County Housing Authority. However, this is somewhat misleading, as this designation is not necessarily a reflection of the upkeep of the housing. For example, in Saint Michael's, the designation is because capital funds were used to help keep open an on-site day care center so low-income residents could continue to work rather than go on unemployment. In Wicomico County, the rating is being reassessed as new management there is resolving past issues.

HUD also asks DHCD if it knows of any public housing that is scheduled for demolition. DHCD is currently working with the City of Annapolis to redevelop Obery Court which was demolished last year. DHCD is also working with the City to redevelop College Creek, which is located opposite Obery Court. Financing for redeveloping the property is under review. In addition, while not technical PHA units, DHCD is working with the Howard County PHA to redevelop Guilford Gardens, which is owned by the Public Housing Authority but is not technically public housing.

#### DHCD Public Housing Waiting List

HUD regulations ask grantees to provide information on their public housing waiting lists in this section of the Consolidated Plan. DHCD does not operate public housing, so does not have a public housing waiting list. However, DHCD does operate the Section 8 Housing Choice Voucher Program on behalf of some of Maryland's small towns and counties. Each of these jurisdictions maintains its own waiting list, some of which are open and some of which are closed due to the number of people already waiting for Section 8 assistance. The table below provides a snapshot of the total number of households on the Section 8 waiting lists of all of these cities, towns and rural counties where DHCD operates its Section 8 program:

| <b>DHCD Section 8 Waiting List for DHCD Subcontractees<br/>(As of March, 2010)</b> |                           |                            |                        |
|------------------------------------------------------------------------------------|---------------------------|----------------------------|------------------------|
| <b>Household characteristics</b>                                                   | <b>Number of Families</b> | <b>% of Total Families</b> | <b>Annual Turnover</b> |
| <b>Total</b>                                                                       | <b>4,715</b>              | <b>100%</b>                | <b>703</b>             |
| <b>Extremely Low Income (&lt;=30% AMI)</b>                                         | <b>3,784</b>              | <b>80%</b>                 |                        |
| <b>Very Low Income (&gt;30% but &lt;=50% AMI)</b>                                  | <b>799</b>                | <b>17%</b>                 |                        |
| <b>Low Income (&gt;50% but &lt;=80% AMI)</b>                                       | <b>132</b>                | <b>3%</b>                  |                        |
| <b>Families With Children</b>                                                      | <b>2,635</b>              | <b>56%</b>                 |                        |
| <b>Elderly Families</b>                                                            | <b>361</b>                | <b>8%</b>                  |                        |
| <b>Families with Disabilities</b>                                                  | <b>1,233</b>              | <b>26%</b>                 |                        |

NOTE: The number of Families With Children, Elderly Families, and Families with Disabilities on the waiting list does not add up to the Total Number of Families because families can fall into more than one category, for example, they could both be classified as elderly and having a disability.

### Minority and Low-Income Concentrations

One of the items HUD asks the State to look at is concentrations of persons by race or income. The State is allowed to use its own definition of what constitutes a "concentration" and we define it as a census tract where the percentage of minority or low income households is at least 10% greater than the county average. DHCD ran statistics for all of the major ethnic groups, as well as Hispanics. No concentrations by race were found except for black or African-American households. One census tract (ID 955000) in Caroline County had a concentration of persons of Hispanic background.

#### Areas of Minority Concentration

As shown on the map on the following page, of the 346 census tracts in Maryland's non-entitlement areas, 25 have minority concentrations of black or African-Americans. This represented a decrease from 38 census tracts identified in the last AI using 1990 data. Twelve of these 25 concentrations are due to institutional populations, which typically have a higher number of minorities than society as a whole. These twelve are:

| County     | Census Tract | Reason for Concentration                     |
|------------|--------------|----------------------------------------------|
| Allegany   | 001300       | State Prison                                 |
| Allegany   | 000200       | State Prison                                 |
| Calvert    | 860702       | Prison Work Release Facility                 |
| Dorchester | 970500       | Residential Hospital Center                  |
| Somerset   | 980101       | Historically Black College                   |
| Somerset   | 980300       | State Prison                                 |
| Somerset   | 980400       | State Prison                                 |
| Washington | 009000       | State Prison                                 |
| Washington | 011000       | State Prison                                 |
| Worcester  | 990300       | Residential Hospital Center                  |
| Worcester  | 990900       | Residential Hospital Center and State Prison |
| Worcester  | 991100       | Residential Hospital Center                  |

In addition, concentrations are higher in three other census tracts due to a large military presence, as the military also tends to have a much higher percentage of minorities than the State and society as a whole. These tracts are the three census tracts in Saint Mary's County (995900, 996001 and 996002) which are impacted by the Patuxent Naval Air Station.

After subtract out these 15 census tracts where the data was skewed by special circumstances, the State had ten census tracts with high minority concentrations. Of these ten, five were located in or on the edge of small towns on the Eastern Shore – Cambridge (tracts 970500 and 970600) in Dorchester County, Easton (tract 960300) in Talbot County, Grasonville (a historically black community in tract 810700) in Queen Anne's County, and an area outside of Salisbury (tract 010200) in Wicomico County. In primarily rural areas, towns typically have higher numbers of minorities than the surrounding farm areas, so these findings are not surprising. However, in a few census tracts, notably the tract outside Salisbury (which is more than 85% African-American in a county that is less than 20 percent African-American) and the two tracts in Cambridge, the numbers are significantly higher than their Counties as a whole. These concentrations may indicate either a past historical pattern of segregation, and/or possible discrimination in these communities.

Of the remaining four tracts, one is in Kent County, and the other four are in Charles County. The Kent County tract barely qualified as a concentration, exceeding the threshold by 1 tenth of 1 percent. This area is primarily rural, and it is unclear why a concentration exists.

### Concentrations of Race by Census Tract<sup>1</sup>: Black or African American Alone (excluding entitlement areas)

Of the four tracts with minority concentrations in Charles County, one of the tracts (950901) is a small area located in the Saint Charles/Waldorf area, a designated revitalization area for the State. The other three tracts are located on the edge of Prince George's County, one of the nation's few "majority minority" counties, and close to Washington, D.C., a majority minority city. One reason that these concentrations may exist is because economically successful minority families are moving to Charles County, pushing out the boundaries of the adjacent, economically successful minority communities. This theory is supported by the fact that while these census tracts show up as having concentrations of minority persons, they do not show up as low-income concentrations. The households are more likely to be African-American, but not more likely to be poor. In addition, as part of our review of Home Mortgage Disclosure Act (HMDA) data in updating our Analysis of Impediments to Fair Housing Choice, we found that the percent of minority households applying for loans in Charles County exceeded white households by about 80%, and the number of loan applications by minority households far exceeded those for minorities in any other county.

### Low-Income Concentrations

Low-income households are households with incomes 50% or less of the median income. Based on 2000 Census information, there were 31 census tracts with concentrations of low-income persons in Maryland's non-entitlement jurisdictions that year. This was a decrease from 41 census tracts using 1990 census information.

Concentrations of Low Income by Census Tract<sup>1</sup>: Occupied Households, Income <=50% HAMFI<sup>2</sup>  
(excluding entitlement areas)

Comparing the census tracts with high minority concentrations to high low-income concentrations, the data shows that only 11 of the tracts meet both criteria, a very low correlation. Of these 11, five are impacted by the same conditions that skewed the minority concentration information. That is, one of the tracts (98010 in Somerset County) had incomes affected by a Historically Black College, one was affected by the Veterans Home in Calvert County (tract 86072), and three were impacted by residential hospital centers (tract 955600 in Dorchester County and tracts 990300 and 991100 in Worcester County). Of the remaining six tracts, two are in Saint Mary's County and may be impacted by the military base, three are outside of small towns on the Eastern Shore (Cambridge, Easton and Salisbury), and the remaining one is the tract located between Saint Charles and Waldorf in Charles County.

As noted above, there was one area of Hispanic Concentration in the State's non-entitlement jurisdictions. This concentration is due to the presence of a chicken processing plant that has recruited a large number of Hispanic workers to the area. The area is not a low-income concentration.

## Inventory Of Facilities And Services For The Homeless And Persons Threatened With Homelessness

### Emergency and Transitional Shelters

There are numerous organizations in Maryland which help house homeless individuals and families. These organizations provided 3,434 emergency shelter beds, 3,024 transitional housing beds, and 277 undesignated beds in 2008 (data for 2009 is currently being compiled). Many of the organizations which offer shelter also offer supportive services, and some offer meals or food supplies..

Several "special needs" groups of homeless persons are assisted by these facilities. Other facilities aim their housing and supportive services towards assisting the mentally ill. In addition, some facilities assist focus on homeless youth, while others focus on homeless persons with alcohol and/or drug abuse problems. Finally, a number of programs focus on victims of domestic violence, some using shelter programs and four using "safe houses". The most recent list of homeless shelters in Maryland, who they serve, and the supportive services they provide can be found in **Appendix III**. In addition to shelter programs, the homeless and those threatened with homelessness in Maryland are also assisted by soup kitchens, soup kitchens which also operate food pantries, and food pantries which do not operate soup kitchens. That list may also be found in **Appendix IV**.

### Inventory of Supportive Housing for Non-Homeless Persons with Special Needs

Maryland has been a national leader in providing supportive housing assistance for persons with special needs. According to the National Council of State Housing Agencies, DHCD has been among the top ten financers of group homes or alternative living units for persons with mental illness or developmental disabilities almost every year in the past ten years.

While we have been very successful in these efforts, the disability community has expressed the desire to be part of the mainstream and to reside in scattered site housing of their own choosing. While group homes remain a necessity for some persons due to the severity of their disability, the majority of persons with disabilities are capable of residing in alternative settings. This direction is enhanced by the availability of flexible off-site support services that are now provided by many service delivery agencies. This more flexible service delivery approach has assisted many persons to live more independently.

In support of efforts to mainstream persons with disabilities, DHCD, in addition to its group home programs, also offers a Homeownership for Individuals With Disabilities Program, as well as a Section 8 Mainstream Voucher program. DHCD also awards higher points in its Qualified Allocation Plan (QAP) to rental projects that provide more handicapped accessible units than required by law, resulting in a significant increase in the number of units being available to persons with disabilities. In addition, as part of the goals of this Plan, DHCD, working with DHMH, DHR, and MDoD, will offer a new Bridge Subsidy program that will provide rental assistance to persons with disabilities while they await permanent housing.

### The Developmentally Disabled

The Developmental Disabilities Administration (DDA) provides a coordinated service delivery system so that individuals with developmental disabilities receive appropriate services oriented toward the goal of integration into the community. This wide array of community based services is delivered primarily through a network of more than 170 non-profit providers. Currently, approximately 22,000 individuals receive community based services. In addition, 380 individuals receive services in one of the four state residential centers operated by DDA.

The Developmental Disabilities Administration also maintains a waiting list of individuals who are eligible for services and are waiting to receive one or more of three basic services (residential, day and support services). As of January 1, 2005 there were 14,616 individuals on the waiting list. Of these, nearly 2,500 individuals are in a crisis resolution or crisis prevention category and will require immediate housing assistance if their caregiver dies or becomes unable to take care of them.

Approximately 4,783 Individuals currently receive residential services through DDA. An additional 380 individuals reside in institutions. Persons receiving residential services live in settings provided by the agency that delivers their services. These individuals do not have control of their housing situation. In addition, approximately 1,464 individuals receive Community Supported Living Arrangement (CSLA) services in their own home, apartment, family home or rental unit.

### **Individuals With Mental Illness**

Persons with mental illness in Maryland include those individuals who are affected by mental illness or deeply rooted psychological problems. The Mental Hygiene Administration (MHA) in DHMH is the State's lead office working with mentally ill persons in Maryland. MHA currently services approximately 90,000 persons with housing and support services.

In addition to RRP services, individuals can choose to live in independent housing that is owned by the program that rents or leases the unit. The consumer has choice in selecting mental health services from community providers that may include outpatient services, psychiatric rehabilitation programs, and/or case management as well as other community resources. The following programs provide housing but do not provide direct mental health services to the consumer.

### **Persons With HIV/AIDS**

The AIDS epidemic is a problem of growing concern in the State of Maryland as well as the rest of the nation. The Maryland Infectious Disease and Environmental Health Administration, a division of the Maryland Department of Health and Mental Hygiene (DHMH), has primary responsibility for meeting the needs of people with AIDS in Maryland. The Administration provides counseling, outreach, and patient care services to individuals who are HIV positive, and testing and education to the community as a whole.

While the number of AIDS deaths has been declining substantially in recent years, the rate of *infection* has remained fairly steady. In addition, members of ethnic minority groups continue to have much higher rates of AIDS/HIV infection than other groups.

The Maryland Infectious Disease and Environmental Health Administration does not provide housing per se for HIV positive individuals. Rather, it subcontracts to DHCD, as well as Montgomery and Frederick Counties, funding under the Housing Opportunities for Persons With AIDS (HOPWA) program to provide housing assistance to persons with HIV/AIDS in different service areas. This housing assistance is in the form of rental assistance similar to Section 8. Currently, about 30 households are assisted under this program in the areas covered by the State's Consolidated Plan, including Allegany, Caroline, Dorchester, Garrett, Kent, Saint Mary's, Somerset, Talbot, Washington, Wicomico and Worcester Counties. Frederick and Montgomery Counties constitute a separate service area under the HOPWA program. Funding is provided to the City of Frederick (which operates its own Consolidated Plan), but the City typically gives the funding back to DHMH to reallocate to housing agencies in the Frederick County/Montgomery County service area who have greater capacity to operate the program.

For HIV positive individuals who do not need housing, the Administration provides financial counseling as well as other assistance to help individuals receive the financial and medical benefits they are entitled to so they may remain in their homes. HIV positive individuals may also be admitted to DHMH sponsored group homes as appropriate.

### **Persons With Alcohol and Other Drug Addictions**

The Alcohol and Drug Abuse Administration (ADAA) of the Department of Health and Mental Hygiene is the State agency responsible for the planning, development, coordination and delivery of services to prevent and treat harmful involvement with alcohol and other drugs by: supporting a statewide coordinated service delivery system, determining customer needs for services, program planning and development, training addictions professionals and other health, human service and criminal justice personnel, collecting and analyzing addictions treatment and prevention data, evaluating services and customer outcomes and collaborating with local, State and federal agencies.

Although most clients are helped on an outpatient basis, ADAA also certifies residential programs for persons with alcohol and drug addictions:

The Level III.7 (Medically Monitored Inpatient- Intermediate Care Facilities) programs which offers residential services in a medically monitored inpatient treatment. The program provides an intensive treatment regimen of individual and group therapy as well as other activities aimed at the physical, psychological and social recovery of the addicted individual. Clients usually remain in residence for two to four weeks.

The Level III.1 (Halfway House) programs are residential care facilities which provide time-limited services to clients who have received prior evaluation or treatment in a primary or intermediate care program. These clients during their stay (usually up to six months) seek employment and move to a position of personal and economic self-sufficiency.

The Level III.3 and Level III.5 (Long Term Care and Therapeutic Communities) programs are residential care facilities which provide the same at Level III.1 but for a longer period (usually up to a year).

Listed below is the number of certified substance abuse residential programs by jurisdiction and by Level of Care during fiscal year 2005.

| Department of Health and Mental Hygiene - Alcohol and Drug Abuse Administration<br>Residential Facilities |                                  |                              |                                                |

### The Elderly With Special Needs

Maryland's elderly population, like that of the rest of the nation, is growing in size. Most elderly Marylanders are opting to live their entire lives in their own homes, some elderly require supportive services -- health care, housekeeping, or other assistance -- to help them in their later years. The Maryland Department on Aging (MDoA) has the primary responsibility for providing for the needs of Maryland's elderly population.

As the percentage of the population over the age of 65 continues to grow, the need for supportive housing for elderly persons continues to grow. Medical advances that have resulted in increased life span also means that senior-oriented housing resources are not being vacated

at the same rates as in the 1960s and 1970s. Locally, the elderly in Maryland are opting to stay in Maryland rather than move to south and west; this is particularly true in Baltimore City and Baltimore County.

Two items of special interest to the MDoA are the increasing number of frail elderly who require supportive services to maintain independence and the lack of decent, safe, affordable housing for the poor elderly.

The MDoA currently operates group homes to help address the needs of the frail elderly under its Group Sheltered Housing Program. Seniors in this program must be at least 62 years old, in need of assistance with one or more activities of daily living, and have incomes of no more than 60 percent of statewide median.

The Maryland Department of Aging is authorized to regulate Continuing Care At Home (CCAH), a new concept in delivering services to the elderly. Similar to the Continuing Care Retirement Community (CCRC) structure, subscribers to CCAH will pay a one-time entrance fee and monthly premiums to access comprehensive, managed long term care services in their own homes. This housing option is designed for persons 60 years of age and older with moderate to higher incomes and who are living independently in the community.

CCAH services include: care coordination, home inspections by occupational therapist, assistance with activities of daily living in subscriber's home, skilled nursing services in subscriber's home, routine services of an assisted living facility, routine services of a comprehensive care facility, and assistance with the maintenance of the subscriber's dwelling.

CCAH providers must meet the same requirements as CCRCs, including approval of a feasibility study, and review and approval of the language contained in the CCAH contract. A copy of the regulations for Continuing Care at Home are available by individual request. The Maryland Department of Aging urges anyone who is considering entering into a Continuing Care At Home agreement to consult with an attorney and financial advisor before signing any documents. Although the Department of Aging regulates CCAH providers, it does not rate, endorse, or guarantee a CCAH provider.

The MDoA also assists the frail elderly who would otherwise be placed in group homes or nursing homes through its Senior Nutrition Program which helps handicapped elderly individuals by taking them to nutrition sites or senior centers, and the Home Delivered Meals Program, which assists homebound elderly individuals who are unable to cook. The Department also keeps a list of subsidized low-income projects, both public and private, operated within the State, as part of a referral network of affordable housing for elderly individuals who are poor and in need of housing.

The tables below list the Continuing Care Retirement Communities and Congregate Care Housing Services the Department on Aging provides in Maryland:
