Public School Enrollment Projections, 2015-2024
September 2015 Publication No. 2015-003

This Public School Enrollment Projections was produced by the Planning Data Services Division of the Maryland Department of Planning as a service to local governments and planning officials.

FOREWORD

This report, Public School Enrollment Projections 2015-2024, is an update of the Maryland Department of Planning's annual report on public school enrollment statistics.

The report provides projections of public school enrollment through 2024 by grade for each of the counties of the State and Baltimore City. Statistics on actual total and public school enrollment for 2004-2014 are also included.

The public school enrollment projections utilize the Maryland Department of Planning's population projections by age and sex for each jurisdiction. The population projections are used to derive school-age population (persons 5-17 years of age) and projected births. These projections are then used in conjunction with a "grade succession" methodology to derive the ten-year, grade-specific enrollment projections.

A preliminary set of enrollment projections along with supporting materials documenting the projection methodology were sent previously to each School Superintendent and facility planner.

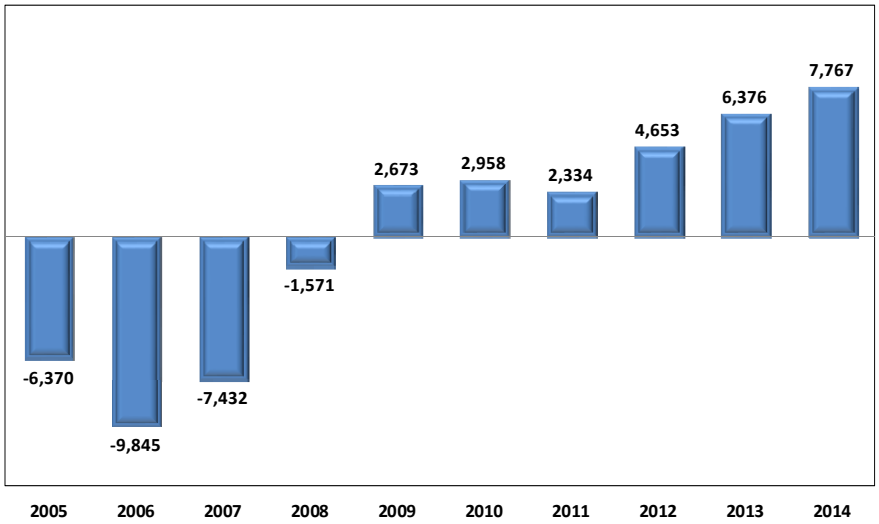
Executive Summary

A. Statewide Totals

- Maryland's total public school enrollment increased in 2014 for the sixth consecutive year. (See Chart 1.) The 7,767 student gain in 2014 (0.9%) was nearly 1,400 more than in 2013 and was the largest increase since 1998 (10,680). Over the last six years, total public school enrollment has grown by just under 26,800, or 3.3%. These gains are attributed in part to a smaller share of students attending private schools as well as increased cumulative birth cohorts in the last four years.

Chart 1. Historical Annual Change in Total Public School Enrollment in Maryland, 2005 - 2014 *



* Grades K thru 12
Prepared by the Maryland Department of Planning

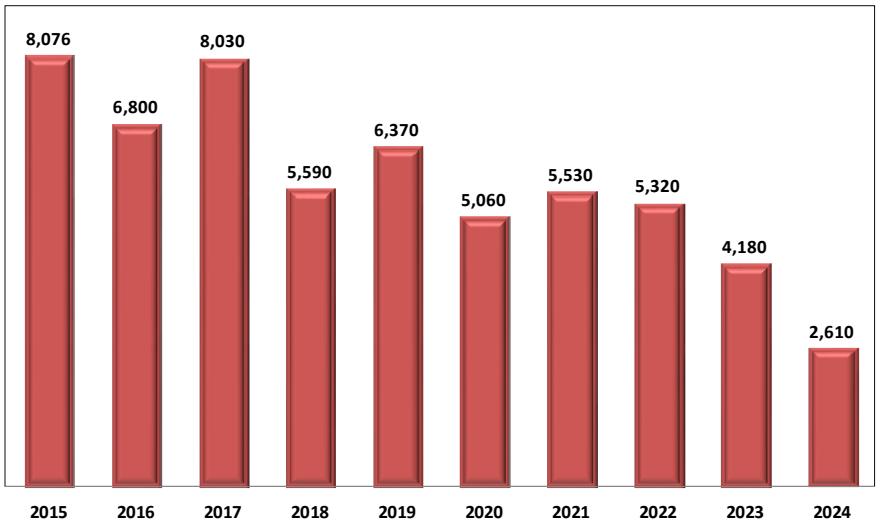
- With gains over the last six years (which followed five straight years of losses), Maryland's 2014 public school enrollment of 843,724 is only 3,998 (-0.5%) below the peak enrollment of 847,722 in 2003.[1] The reduction from the peak total in 2003 to the low point in 2008 (816,963) was due mostly to smaller accumulated birth cohorts as well as fairly strong domestic out migration in the early and middle part of the 2000s that were not fully compensated for by gains from foreign immigration.

- Total public school enrollment is projected to increase in each of the next 10 years, but growth will be much more substantial from 2015 to 2019. (See Chart 2.) The smaller growth after 2019 is due to the smaller number of births which occurred during and after the Great Recession.

[1] Data for Maryland enrollment does not include The SEED School of Maryland, a statewide, college-preparatory, public boarding school that is located in Baltimore City. In 2014, there were 406 students enrolled in grades 6 thru 12. If the SEED school were included in the 2014 statewide totals (the school did not exist before 2008), then the 2014 enrollment is 3,592 (-0.4%) below the 2003 peak.

- Total public school enrollment in 2024 is projected to be nearly 901,300, or 57,566 (6.8%) more than in 2014. (See Table 1.) The 2024 enrollment would be a new peak total for Maryland.

Chart 2. Projected Annual Change in Total Public School Enrollment in Maryland, 2015 - 2024 *



* Grades K thru 12
Source: Maryland Department of Planning

- Elementary school enrollment (grades K thru 5) is projected to experience decreasing gains over the next two years, achieving a peak total in 2016. This peak total will be followed by small declines for four years before growth resumes again in 2021. (See Chart 3.) Despite the slower growth and small declines in the middle part of the projection period, elementary school enrollment is expected to be just over 7,300 higher (1.8%) than in 2014.

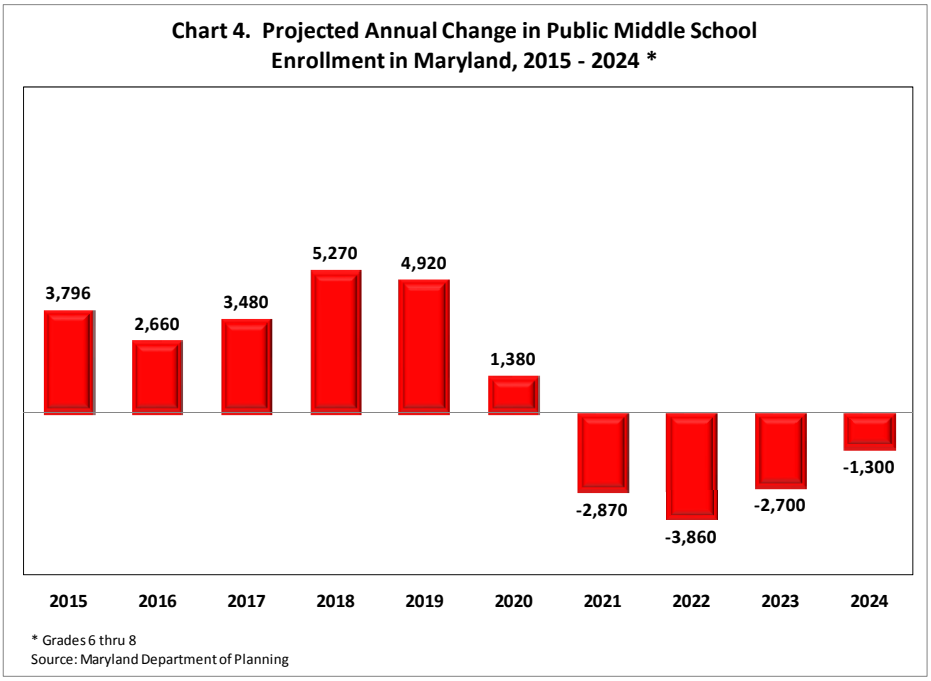
* Middle and high school enrollment figures do NOT include secondary ungraded students before 2005. Secondary ungraded are included in all total enrollment figures.

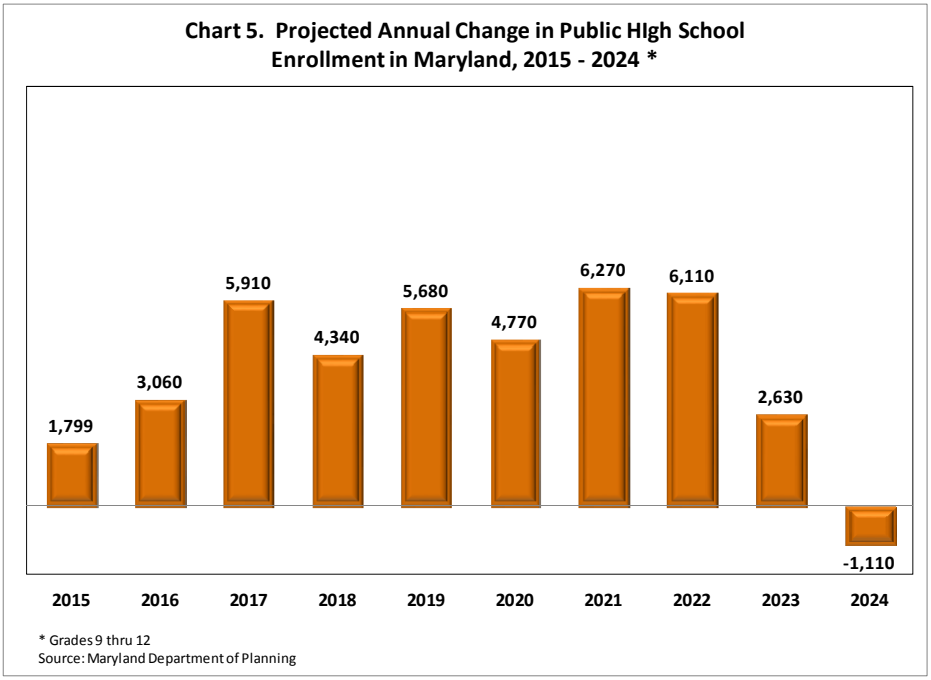
Source: Maryland Department of Education (2004, 2009 and 2014).
Projections (2015-2024)prepared by the Maryland Department of Planning.

- Middle school enrollment (grades 6 thru 8) is projected to grow substantially between 2014 and 2024, with a nearly 10,800 (5.7%) gain. Despite this overall increase over the 10-year period, middle school enrollment is projected to grow only in the first six years, before beginning to decline in 2021 (See Chart 4.) The projected growth over the next six years is a continuation of substantial gains that began in 2013 after declines in all but one year (2011) between 2004 and 2012. These declines were mostly due to the lower birth years during the 1990s.[2]



- High school enrollment (grades 9 thru 12) is projected to be almost 39,500 (or 15.5%) higher in 2024 compared to 2014, leading to a new peak total for Maryland. High school enrollment had a small gain in 2014 (447), its first in eight years, and growth is anticipated to be much more substantial beginning in 2015, aided by the raising of the age of compulsory public school attendance from age 16 to age 17 in that year. Growth will be strongest for the years 2017 through 2022, with a small part of this increase due to the final raising of the age of compulsory attendance to age 18 by 2017. (See Chart 5.)

[2] Also, for years 1998 to 2001 only 11-months of births were eligible to enter kindergarten due to the transition to older age requirements. These smaller cohorts were then also a factor in declining middle school enrollment in later years.



B. Jurisdiction Trends

- Eighteen of Maryland's 24 jurisdictions are expected to have a larger enrollment in 2024 compared to 2014. The largest numeric increases are anticipated for Baltimore (11,592), Montgomery (10,670), Howard (8,799), Prince George's (7,837) and Anne Arundel (6,802) counties, while the largest percentage increases are seen for Howard (16.8%), St. Mary's (14.8%), Charles (12.6%), Dorchester (11.5%) and Baltimore (10.9%) counties. (See Table 2.)

- Howard (3,340), Baltimore (1,883), Charles (1,159), Anne Arundel (874) and Frederick (812) counties are expected to have the five largest numeric increases in elementary enrollment by the end of the 10-year period. Eleven jurisdictions are expected to have less elementary enrollment in 2024 than in 2014, with the largest decline in Baltimore City (-934, or -2.3%) and Calvert (-378, or -5.7%) and Allegany (-239, or -6.2%) counties.

- The largest percentage increases for elementary school enrollment are expected to be in Howard (14.1%), Charles (10.5%) and St. Mary's (5.9%) and counties.

- Baltimore (2,904), Montgomery (2,452), Prince George's (1,774), Anne Arundel (1,620) and Howard (1,594) counties are expected to have the largest middle school enrollment gains over the next 10 years. In all five cases, however, peak middle school enrollment will occur at higher levels before the end of the 10-year period. For Howard, peak

* Year in which enrollment is expected to peak during the 2015-2024 projection period. " ----" indicates no projected peak enrollment during the 2015-2024 projection period

Source: Maryland Department of Eduction (2004 and 2014). Projections from the Maryland Department of Planning.

enrollment is anticipated for 2021, while for the other four it is 2020. Nine jurisdictions are expected to have lower middle school enrollment in 2024 compared to 2014, with the largest decline projected for Carroll County (-1,019, or -16.9%).

- The largest percentage increases for middle school enrollment between 2014 and 2024 are anticipated for St. Mary's (16.2%), Dorchester (14.7%), Charles (13.4%) and Howard (13.0%) counties. For all four counties, the largest cumulative percentage gains actually come prior to 2024, with Dorchester and St. Mary's peaking in 2020, Howard in 2021 and Charles in 2023.

- The five largest numeric increases in high school enrollment over the 10-year projection period are seen for Montgomery (8,437), Baltimore (6,805), Prince George's (5,765) and Anne Arundel (4,308) counties and Baltimore City (4,199). Unlike middle school enrollment gains, however, the largest gains will occur at the end of the projection period or in 2023. And, for all five jurisdictions, the bulk of the increases will be during the 2017 to 2022 period as larger middle school cohorts work their way into their high school years. Four jurisdictions are expected to have smaller high school enrollments at the end of the 10-year projection period, with the largest declines anticipated for Carroll County (-762).

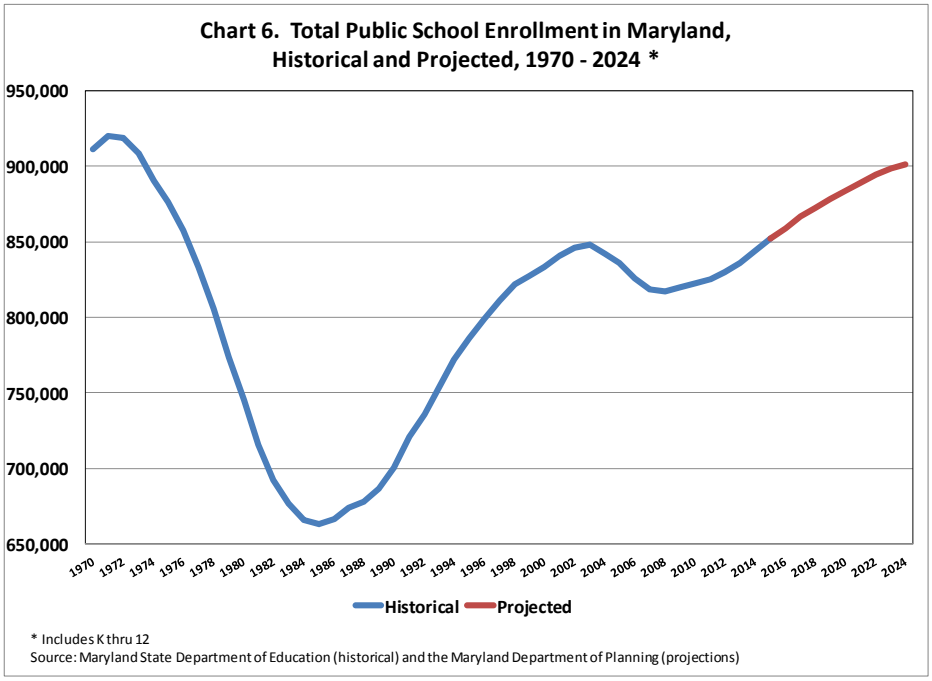
- The largest percentage increases in high school enrollment are projected for Dorchester (34.9%), St. Mary's (28.0%), Caroline (23.9%) and Howard (23.4%) counties.

Long-Term Statewide Demographic Perspective

Over the last four decades Maryland's public school enrollment for elementary, middle and high schools has experienced both significant expansions and contractions. These repeating patterns of growth and decline have been driven by the State's demographic changes - principally in the number of births and in the quantity and direction of net migration.

Chart 6 depicts Maryland's historical and projected growth for total public school enrollment, from 1970 to 2024. Total public school enrollment in Maryland experienced its low point in 1985 (at 663,100) and last peaked in 2003 at 847,700 students, a gain of 184,600, or 27.8 percent, over this 18-year period. It is expected that the modest decline between 2003 and 2008 will be followed by growth from 2009 through 2024, with particularly strong growth between 2014 and 2019. Gains over this 16-year period (2009-2024), will leave public school enrollment totals about 53,600 (or 6.3%) above the 2003 peak.[3]

The decline between 1972 and 1985, the gain between 1985 and 2003, the decline between 2003 and 2008, and the subsequent expansion from 2009 and beyond, can largely be explained by what was happening and what is expected to happen to births and net migration in Maryland.

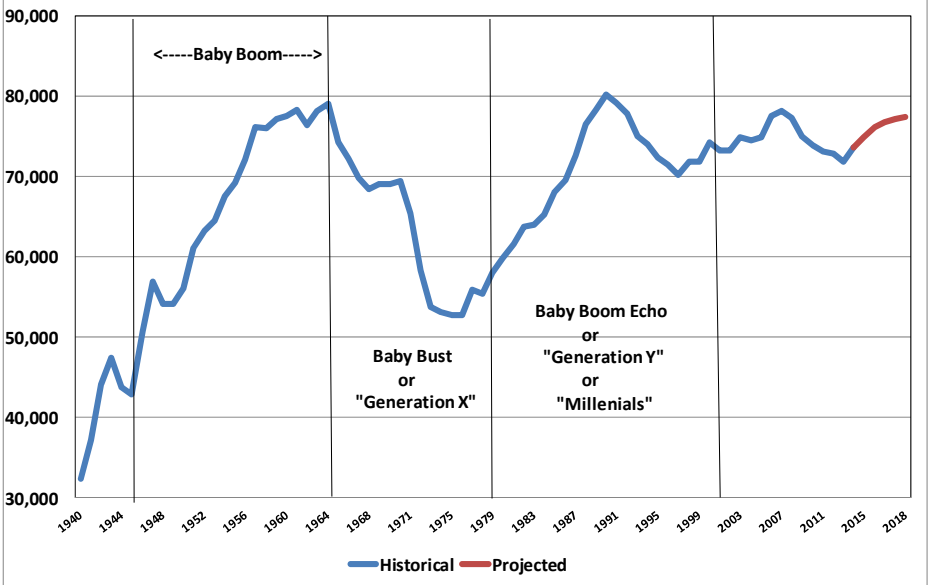


[3] Although the 2024 projected total is being measures against the last peak in 2003, total public school enrollment was actually higher in 1972 (918,586). Projected 2024 totals are around 17,300 (-1.9%) below the 1972 enrollment.

A. Births

Maryland's births began to decline after the peak of the baby boom in 1964, and bottomed out in 1976. From 1978 to 1990 births steadily increased, with the 1990 peak births (80,199) even exceeding the highest total number of births in the peak baby boom year (79,003 in 1964). (See Chart 7.) The difference in the total number of births between these low and high points was rather dramatic, with the 1990 peak births of 80,199 just over 27,500 (or 52.3%) greater than the number of births which occurred in 1976. Births declined from the 1990 peak to a low of 70,151 in 1997, a drop of just over 10,000, and then generally rose until peaking again in 2007 at just over 78,000. The total number of births began to decline once again in 2008 with the advent of the Great Recession. Although the Great recession officially ended in June of 2009, the subsequent slow recovery was a factor in the continued declines in births through 2013 (71,806, the last year of actual data), which were the lowest total since 1998 (71,802).[4] Total births are expected to begin to rise again in 2014 and are projected to average 74,703 per year over the 2010 to 2019 period (corresponding with the enrollment years of 2015 to 2024).

Chart 7. Total Births in Maryland, Historical and Projected, 1940 - 2019



Source: Maryland Department of Health and Mental Hygiene (historical) and the Maryland Department of Planning (projections)

More importantly than births in any one year, however, is the cumulative number of births over a 13-year period that would constitute the potential enrollment pool for grades K thru 12 for a specific school year. Cumulative births by year (those who are roughly between the ages of 5 and 17 for any given school year) reached a low point in 1989 at just under

[4] Economic downturns and periods of economic uncertainty tend to reduce overall fertility rates.

754,200 and later peaked at 964,500 in 2002 (a difference of over 210,000). (See Chart 8.) Cumulative birth totals declined by nearly 38,250 between 2002 and 2010 but began to grow again in 2011. Steady increases are projected over the next 10 years, with the largest gains from 2016 to 2019. (See Chart 9.)[5] These increases in cumulative births correspond directly with the larger enrollment gains thru 2019.

Chart 8. Cumulative Births by School Year in Maryland Historical & Projected, 1970 - 2024 *

[5] All cumulative birth totals have been adjusted to account for the changing kindergarten age eligibility requirements that were phased in between 2003 and 2006.

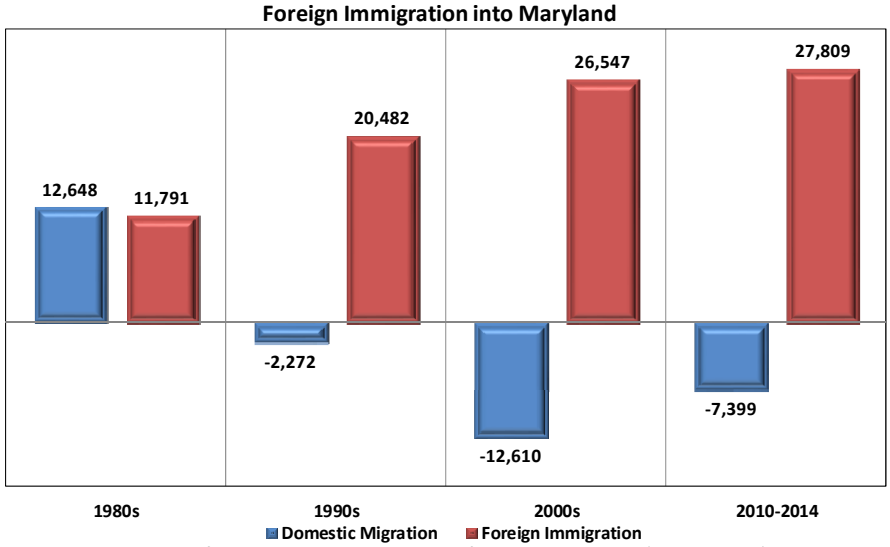
B. Domestic Migration and Foreign Immigration

The number of births is only one aspect of the enrollment picture in that it represents "resident recorded births," (i.e., births associated with females resident in Maryland.) Over the years, these potential students can be either reduced or increased in number depending on what happens with net migration, and, regarding public school enrollment, the percent that attend private school. Net migration is the difference between the inflows and outflows of domestic migration plus the gains from foreign immigration.

Net migration, which could affect the number of school-age kids directly or through the addition or subtraction of young adults that would eventually have school-age kids, has fluctuated markedly over the last couple of decades. This fluctuation has typically been tied to the relative health of the State's economy, but in the latter part of the 2000s before the Great Recession, was also significantly affected by the higher cost of housing in Maryland compared to neighboring states.

Chart 10 below illustrates the estimated calculated average annual net domestic migration and foreign immigration over the last three plus decades. For much of the 1980s, Maryland had one of the stronger economies in the country which resulted in the State averaging gains from net domestic migration of over 12,600 per year. The two decades that followed saw, on average, net domestic *out* migration for Maryland with the average outflow in the 2000s (-12,610) much larger than the 1990s average (-2,272). Post 2010 annual net domestic migration is estimated to be smaller than in the 2000s but still substantial (-7,399).

Chart 10. Annualized Net Domestic Migration and Foreign Immigration into Maryland



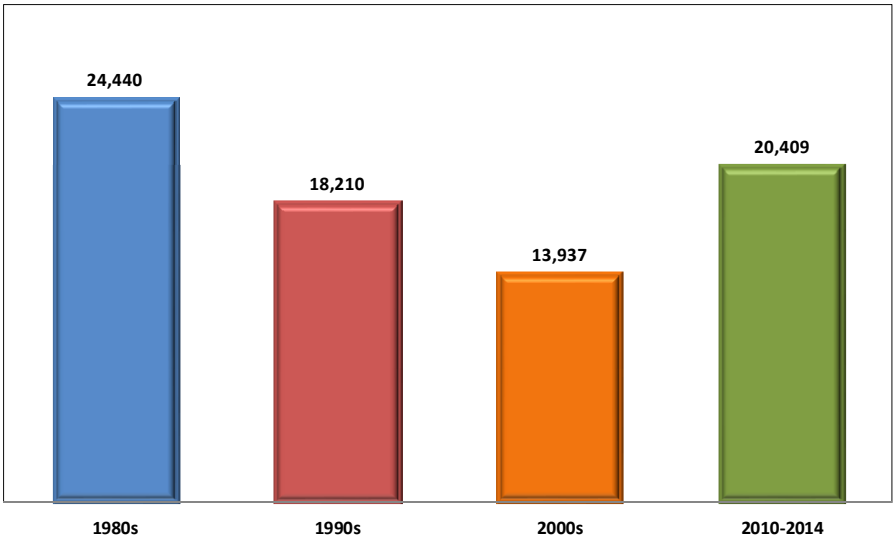
Source: Maryland Department of Planning. Foreign immigration data is from the decennial census (1980s and 1990s) and the 2010 American Community Survey (2000s). Domestic migration is calculated as a residual for the 1980s to 2000s and for the 2010 to 2014 period is from the US. Census Bureau's components of population change as part of their annual population estimates for the April 1, 2010 to July 1, 2014 period.

The larger outflow in the 2000s was due in part to the effects of the expanding "housing price bubble" that developed in the mid part of the decade. As prices began to rise at a rapid rate, Maryland saw an increase in the number of its residents moving to bordering states (particularly to Pennsylvania) where housing costs were lower. The collapse of the housing price bubble, along with job losses in every part of the country, severely curtailed this out migration and Maryland's overall net domestic out migration shrank dramatically after 2008, even turning positive in 2010 and 2011. This led to larger overall population gains for Maryland after 2008 compared to the mid-part of the 2000 to 2010 decade. Net domestic outmigration, however, did begin to pick up again over the last three years as both the job and housing markets improved.

While Maryland's net domestic migration has fluctuated over the last three plus decades, foreign immigration has steadily risen. The average annual gain in the 2000s of just over 26,500 residents per year was more than double the average gain over the 1980s and 29.6 percent greater than in the 1990s. The annual estimates for the current decade through July 1, 2014 (27,809) are a bit ahead of what occurred in the 2000s.

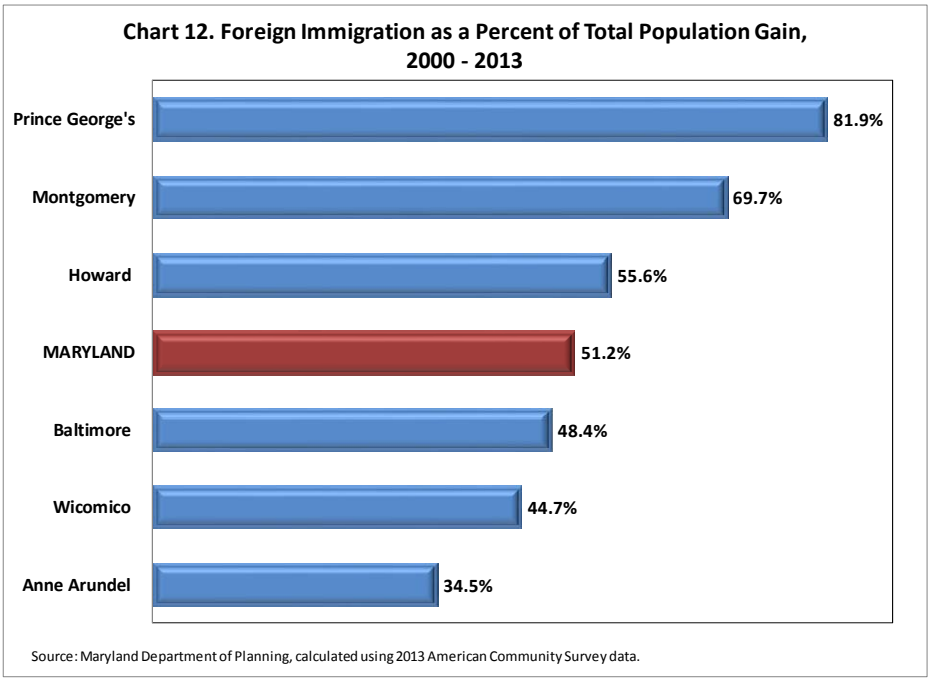
Despite the large increase in foreign immigration in the 2000s, however, as a result of larger net domestic out migration, total annual migration (domestic and foreign) gains in the 2000s of just over 13,900 per year was well below total gains of the 1990s and 1980s (See Chart 11.) Continued strong gains from foreign immigration along with reduced domestic out migration has yielded a substantial pickup in total migration over the 2010 to 2014 period (20,409), highest since the 1980s.

Chart 11. Annualized Total Net Migration for Maryland



Source: Maryland Department of Planning. Total migration is calculated as a residual for the 1980s through the 2000s using the decennial census (1980s and 1990s) and the 2010 American Community Survey (2000s) as well as birth and death data from administrative records. Total migration for 2010 to 2014 is from the U.S. Census Bureau's components of population change, part of their annual population estimates for the April 1, 2010 to July 1, 2014 period.

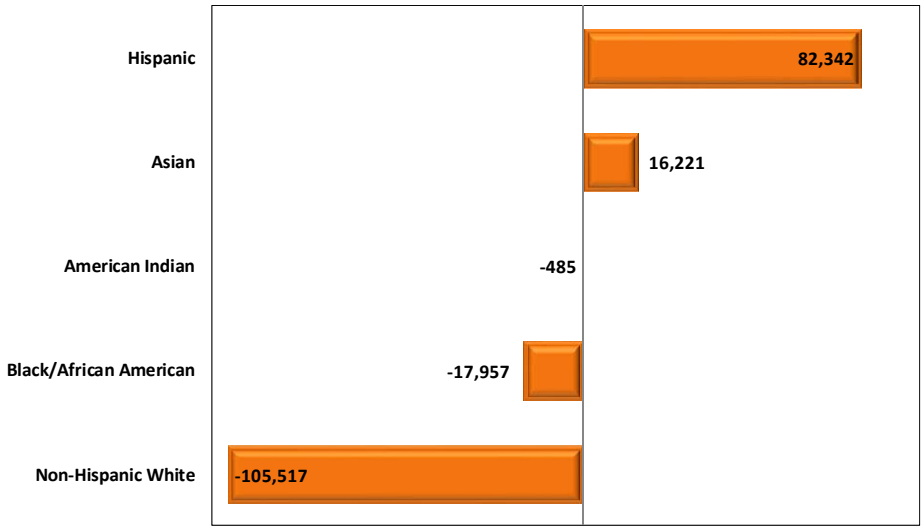
While foreign immigration has been an important source of population growth statewide since 2000 – representing just over one-half of the total gain, it was an even more significant component of overall population growth for several of Maryland's jurisdictions. For example, foreign immigration gains for Prince George's County between 2000 and 2013 accounted for just over eight-out-of-10 of the overall net population gains during this period; while for Montgomery County it was nearly seven-out-of-10. For Howard County foreign gains accounted for 55.6 percent of the total population increase, while for Baltimore County it was nearly one-half (48.4%). (See Chart 12.)



From a statewide perspective, the combination of net domestic out migration with gains from foreign immigration has been a significant factor in the increase in minority enrollment in Maryland. Overall, between 2000 and 2014 the largest gains in both absolute and percentage terms in public school enrollment were in Hispanic and Asian students, while non-Hispanic white enrollment declined significantly. (See Charts 13 and 14.) As a result of this growth pattern, non-Hispanic white enrollment went from 53.6 percent of total enrollment in 2000 to 40.4 percent in 2014.[6] (See Chart 15.) The largest increase in share during this period was for Hispanics, rising from 4.7 percent in 2000 to 14.4 percent in 2014.

[6] Maryland first became a "majority minority" public school system in 2004 when non-Hispanic whites were 49.8 percent of statewide enrollment.

Chart 13. Change in Total Public School Enrollment in Maryland by Race & Hispanic Origin, 2000 - 2014 *



* 2014 data also includes mult-race and Native Hawaiian students which cannot be directly compared to 2000 data. In 2014, there were 35,335 multi-race students and 1,221 Native Hawaiian students.

C. Intra-State Migration

While foreign immigration has been an important source of population growth for the inner suburban counties like Montgomery, Prince George's and Baltimore since the 1990s, intra-state migration, the movement of people from one Maryland county to another, has been a key element in the growth of many of the outer suburban and more rural counties. The patterns of these intra-state migration flows have typically been from the inner suburban counties to contiguous outer suburban counties and from outer suburban counties to more rural counties. For example, out migration from Montgomery and Prince George's counties increased the total population and school enrollments in many outer suburban jurisdictions, including, Calvert, Charles, Frederick and Howard counties. During the middle part of the 2000 to 2010 period there was evidence of a third wave of suburbanization into exurban counties. In this case, increasing population gains from intra-state migration were realized by Washington County (primarily from Frederick and Montgomery counties) and Cecil County (primarily from Harford County), although these movements substantially slowed with the collapse of the housing bubble in the latter part of the decade and have not yet resumed to any great extent through 2014.

D. Public/Private Enrollment Share

Besides the number of births, domestic migration and foreign immigration flows, another important factor in determining public school enrollment is the percentage of all students which attend public versus private schools. Unfortunately, data on K thru 12 private school enrollment for the last seven school years (2008 – 2014) are not directly comparable to prior years or even to each other and thus it is not possible to establish an historical trend through the current school year. This is because the Maryland State Department of Education, which generates the non-public school enrollment data, switched to an online survey of private schools in 2008 (from a mail-out/mail-back survey) which resulted in a much lower response rate than in prior years. Moreover, participation in the survey is voluntary and is not subject to a thorough verification and audit process.

What the data does show is that K-12 private school enrollment "dropped" from 131,441 in 2007 to 104,030 in 2008, the first year of the online survey. This pushed the overall public school share of total enrollment (public plus private) to 88.7 percent, a jump of 2.5 percentage points from 2007, and the highest on record up to that point. (See in Section 3, Total School Enrollment Public, 2004-2014.) Prior to 2008, the highest public share on record over the last couple of decades was 87.2 percent in 1991. Data since 2008 indicate that private school enrollment rose to nearly 110,000 in 2010 and then dropped by a total of 13,881 (-12.6%) in the four succeeding years, falling to 96,043 by 2014. As a result, the public share of total enrollment has increased from 88.2 percent in 2010 to 89.8 percent in 2014, the highest post 2008 share.

While it is entirely reasonable that private school enrollment dropped in 2008 (and the public share increased) due to the economic hardships brought about by the Great Recession, it is nearly impossible to verify the magnitude of this drop. Likewise, the magnitude of the drop in private school enrollment between 2010 and 2014 is difficult to verify, but certainly, if true, may be a factor in the growth in public school enrollment over the last several years.[7]

[7] Also a factor in the decline of private school enrollment is the closing of 13 parochial schools by the Catholic Archdiocese of Baltimore, effective with the school year starting in September 2010. Ten of these schools were in Baltimore City and three in Baltimore County with a total of 2,152 students. Affected students were offered a guaranteed spot in a school no more than five miles from their current school.

Trends and Projections in Public School Enrollment by Type

The statewide and jurisdiction population and birth projections form the basis for the projected school enrollment, which anticipates stronger growth in total enrollment over the next five years before enrollment growth slows down a bit over the remaining five years of the projection period.

The following describes the trends and projections of total public school enrollment and by school type.

A. Total Public School Enrollment

Growth in total public school enrollment over the next 10 years is expected to be greatest over the 2015 to 2019 period. The average annual gain over these first five years is expected to be around 7,000 compared to around 4,500 in the remaining five years.

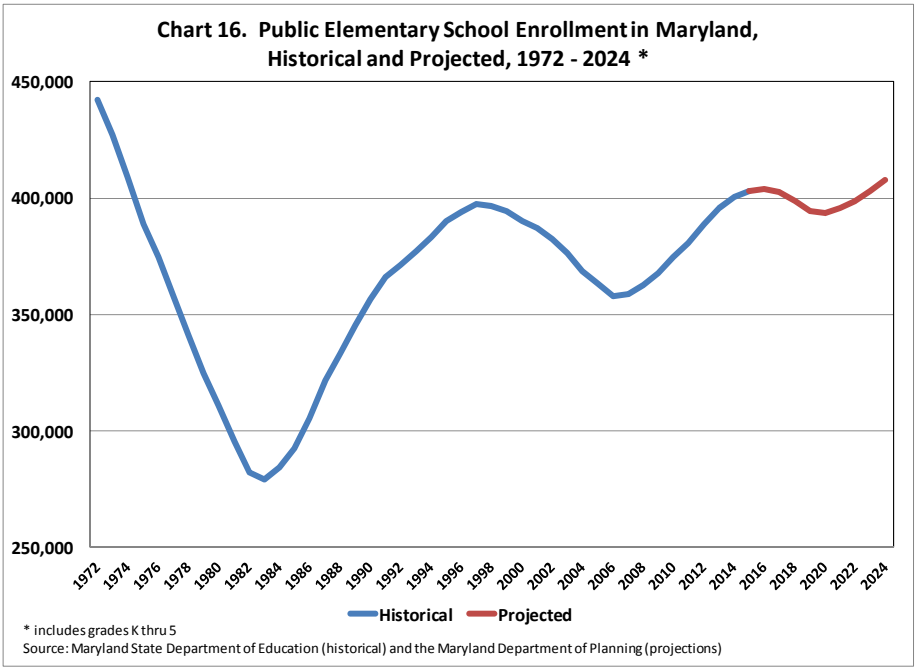
The differences in annual gains during the projection period are being driven primarily by the annual change in the sum of births over successive 13-year periods that correspond to individual K-12 enrollment years. These changes are expected to be greatest during the 2016 to 2019 period, averaging increases of around 6,150 per year; and smallest during the 2020 to 2024 period, averaging gains of just under 1,550 per year. It is also assumed that there will be no significant change in the relatively high percent of (total) students now enrolled in public schools. By 2024, the projected total public school enrollment of 901,290 will be almost 57,600, or 6.8 percent, greater than in 2014.

One factor which could affect enrollment totals over the next 10 years is the relative health of the state's economy compared to the rest of the U.S. Although Maryland's economy was hurt less by the Great Recession than most other states, its recovery since then has also lagged most states. It was anticipated that Maryland would more than likely return to having one of the stronger economies in the nation in the coming years due in part to the employment gains from Base Realignment and Closure (BRAC) process, which was completed by the end of 2011.[8] However, March, 2013 saw the beginning of federal budget sequestration which resulted in across the board automatic spending cuts. If federal personnel and procurement budgets are severely cut over the next decade or so, the State could be disproportionately affected given the number of federal employees living in Maryland and the very high federal per capita expenditures captured by Maryland firms. If Maryland's job growth continues to be below national rates (as it was in 2013) this could negatively influence potential population gains through domestic migration flows.

[8] This "completion" refers to the movement of federal government employees, but not necessarily the associated contractor jobs.

B. Public Elementary School Enrollment (grades K thru 5)

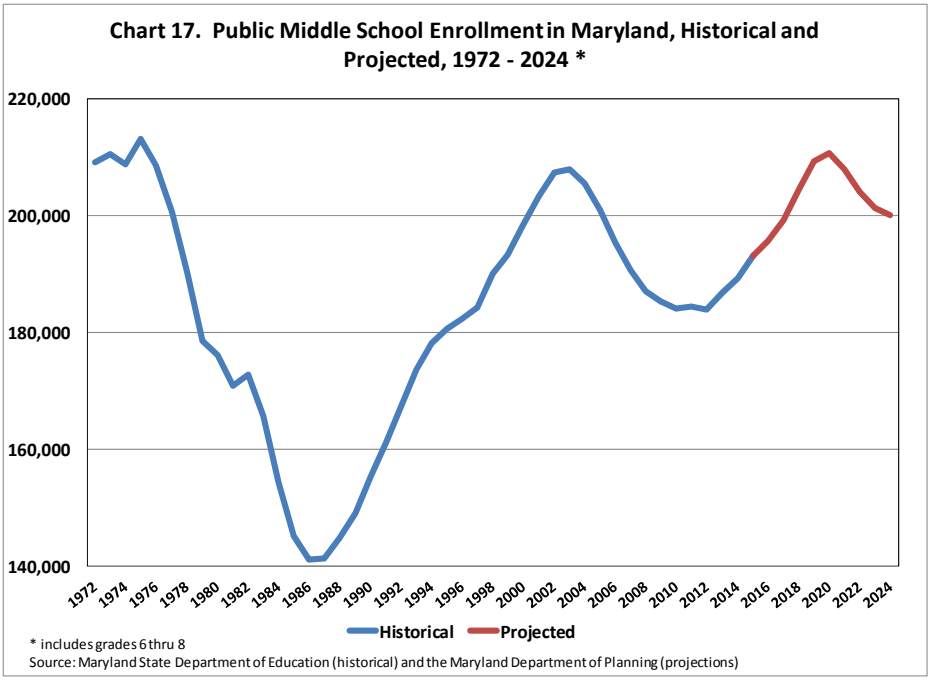
Public elementary school enrollment (grades K-5) dropped by nearly 163,300 students (-36.9%) between 1972 and 1983, the low point over the past several decades. (See Chart 16.) This decline was caused by the passing of the last of the "baby boom" generation (those born between 1946 and 1964) through their elementary school years, which were then followed by the "baby bust" generation (sometimes called "Generation X") characterized by a period of declining births. The baby bust generation was followed, in turn, by the larger baby "boomlet" cohorts (sometimes called "Generation Y," the "baby-boom echo" or more recently and perhaps finally "millennials") resulting in an 118,300 (42.4%) increase in elementary enrollment from 1983 to 1997. Lower numbers of births after the peak in 1990 resulted in a decline in elementary enrollment from 1997 thru 2006 of nearly 39,300 (-9.9%) yielding a total enrollment of just under 358,000. Elementary enrollment began to grow again in 2007, and averaged 6,350 new students in each of the last six years (2009-2014), with the gain in 2012 (8,291) the largest in the state since 1991.



Annual gains in elementary growth since 2012 in (6,598 in 2013 and 4,987 in 2014) have been smaller and gains over the next several years are also anticipated to shrink. These smaller gains thru 2016 are projected to be followed by declines in 2017 thru 2020 before elementary enrollment begins to grow again in 2021 with successively larger gains. (See Chart 3 in the Executive Summary.) Birth patterns, as well as changing "K to birth" and "first grade to birth" ratios all play a part in this "U-shaped" growth pattern. At the end of this pattern of gains, losses and gains again over the next 10 years, elementary enrollment in 2024 is projected to be 407,860, or about 7,300 (1.8%) above 2014. The 2024 totals are also projected to be 5,130 (1.3%) above the previous elementary enrollment peak total of 402,730 in 2017.

C. Public Middle School Enrollment (grades 6 thru 8)

Public middle school (grades 6-8) enrollment changes follow very closely the elementary school enrollment patterns with only the age of the students accounting for the different trough and peak years. (See Chart 17.) From 1975 to its low point in 1986, public middle school enrollment fell by nearly 72,000 students (-33.7%) driven by the same demographic trends as described for elementary school students. Middle school enrollment grew steadily between 1986 and 2003, peaking at just under 208,000 students in 2003, for a gain of 66,800 students, or 47.3 percent. Statewide, middle school enrollment declined by nearly 24,100 (-11.6%) between 2003 and 2012 with only a small gain in 2011 (391) interrupting annual losses in the 2004 to 2012 period.



Sustained middle school enrollment gains began again in 2013 (3,069, the largest since 2002) and in 2014 (2,333). It is anticipated that enrollment will continue to grow over the next six years as larger enrollments in elementary school, which started in 2007, begin to make their presence felt at the middle school level. (See Chart 4 in the Executive Summary.) Middle school enrollment is projected to begin to decline in the last four years of the projection period. Even with these declines, however, middle school enrollment in 2024 is projected to be nearly 10,800 (5.7%) above 2014 totals.[9]

[9] The peak for middle school enrollment during the projection period is expected in 2020, nearly 21,500 (11.4%) above 2014 levels.

D. Public High School Enrollment (grades 9 thru 12)

Growth in public high school enrollment (grades 9-12) is anticipated to follow the same peak-to-trough-to-peak cycle as elementary and middle school enrollment but "shifted to the right" while also being boosted by the two-step increase in age of compulsory attendance. (See Chart 18.) Decades ago, public high school enrollment peaked in 1978 at 266,850 students with the tail end of the baby boomer generation, and then declined by nearly 85,000 students (-31.8%) through 1990. Steady growth followed after 1990, reaching a new peak total of 272,575 in 2006, a nearly 90,700 (49.8%) gain from the low point in 1990. Public high school enrollment declined in 2007 for the first time since 1990 and continued to drop thru 2013, with the nearly 3,300 decline in 2013 the third largest during this seven-year period.

There was a small gain in high school enrollment in 2014 (447), the first increase in eight years, but it is anticipated that this is the beginning of a period of sustained growth. (See Chart 5 in the Executive Summary.) Part of the expected increase next year in 2015 of nearly 1,800 students is the result of the anticipated impact of raising the age of compulsory public school attendance from age 16 to 17 in that year. It is estimated that this rise in the legal dropout age will increase overall high school enrollment by 0.8 percent statewide in 2015.

Growth in the first nine years of the projection period is expected to be significant and will leave total public high school enrollment in 2023 nearly 40,600 (16.0%) above 2014 levels, before declining by 1,100 in 2024. The 2024 total high school enrollment (293,350) will be a new peak enrollment, exceeding the 272,575 enrollment of 2006. A small portion of this overall growth will be due to the final increase in the age of compulsory attendance to age 18 by 2017. It is estimated that the new age requirements will boost high school totals by 2.8 percent.

Chart 18. Public High School Enrollment in Maryland, Historical and Projected, 1972 - 2024

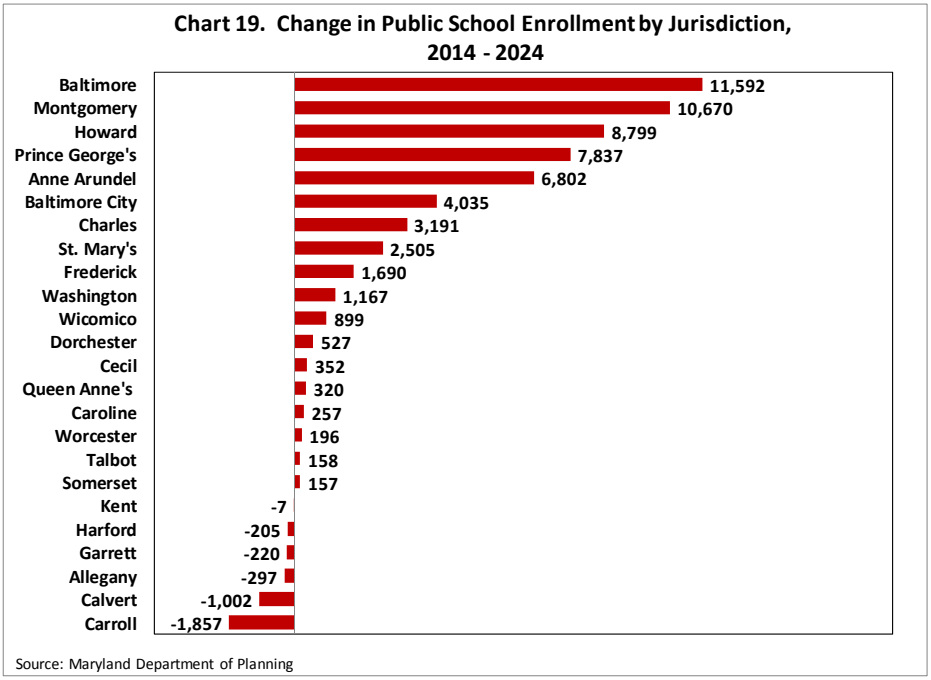
Jurisdiction Projections over the Next 10 Years

A. Total Enrollment

With statewide enrollment projected to grow each year over the next 10 years, all but four jurisdictions –Carroll, Harford, Calvert and Garrett – are projected to have their highest enrollment totals sometime over the next ten years, while these four counties plus Allegany and Kent counties will have lower enrollments in 2024 than in 2014. (See Tables 3, 4 and 5.) Eighty-six percent of the total statewide net gain between 2014 and 2024 is likely to occur in six of Maryland's 24 jurisdictions: Baltimore (11,592), Montgomery (10,670), Howard (8,799), Prince George's (7,837) and Anne Arundel (6,802) counties, and Baltimore City (4,035). (See Chart 19.)



The source of this enrollment growth will vary by jurisdiction. For example, growth in Montgomery County's schools is being fueled mostly through gains from foreign immigration over the years as the County captured nearly three out of 10 (30.8%) of new immigrants to Maryland during the 2000 to 2013 period.[10] At the same time, migration of residents out of Montgomery County is what is driving school enrollment increases in Frederick County (ninth largest gain in the state).

[10] Estimate derived by comparing foreign born totals for Maryland and Montgomery County from the 2000 Census and the 2013 American Community Survey.

TABLE 3. TOTAL PUBLIC SCHOOL ENROLLMENT (GRADES K-12), BY JURISDICTION, ACTUAL (2014) & PROJECTED (2015-2024) *

Projections (2015-2024) prepared by the Maryland Department of Planning.

Foreign immigration is also an important source of new residents – and thus new enrollment for Prince George's County, which was the destination of just over one out of five (22.4%) of new immigrants into the state between 2000 and 2013. In turn, out migrants from Prince George's County is a major source of enrollment growth for Charles County (seventh largest numeric increase).

Outmigration from Baltimore City, as well as gains from foreign immigration, are important components of enrollment growth in Baltimore County. Outmigration from Charles County, and to a lesser extent Prince George's County, has been a source of enrollment growth for St. Mary's County. Anne Arundel County, which has one of the stronger economies in the State due to it being a major recipient of BRAC jobs in addition to other planned expansions at Ft. Meade involving cyber security, has been attracting migrants from both within and outside of Maryland. Howard County's enrollment growth is largely fueled by increases in minority population – particularly Asians and Hispanics - and is impacted from both growing foreign immigration as well as domestic migration gains from other jurisdictions in Maryland, attracted by its reputation for having a quality school system.

The projection of enrollment growth for Baltimore City (with the sixth largest gain over the 10-year period), continues recent trends in which the City experienced relatively modest enrollment gains in six out of the last seven years. Prior to these recent gains, the City experienced 13 straight years of declines, losing nearly 30,700 students (-28.3%) between 1994 and 2007. The projected reversal of the City's historical enrollment decline is attributable in part to more school choice options for City residents due to the increase in the number of charter schools; improved school quality as measured by standardized test scores; and, better high school retention rates. In addition, the closing of 13 parochial schools in Baltimore City and Baltimore County beginning in the 2010 school year left those who desire such an education with fewer options.[11]

The greatest percentage increase over the next 10 years is projected for Howard County (16.8%). With strong overall population growth along with possessing an attractive school system for those locating in Maryland with school-age children, Howard County has had gains in total enrollment for 31 consecutive years (since 1984), the longest period without a decline in the Southern Maryland Region, St. Mary's (14.8%) and Charles (12.6%); Dorchester County (11.5%) in the Lower Eastern Shore Region and Baltimore County (10.9%). (See Chart 20 and Table 5.)

Of the six jurisdictions which are expected to have lower enrollment totals in 2024 than in 2014, the largest numeric and percentage decline is anticipated for Carroll County (-1,857, or

[11] The slowing of overall population losses in the late 2000s and an overall population gain of just under 1,700 between 2010 and 2014 was probably also a factor in the City's enrollment growth.

-7.3%). The projected decline for Carroll County is a continuation of recent trends, where the once fast-growing suburban jurisdiction has lost 3,190 students (-11.1%) over the last nine years. These drops in enrollment are a product of the substantial slowdown in residential growth in the County during the last eight to 10 years caused by both a moratorium on new residential activity, after some very strong growth in the early 2000s, and development restrictions due to adequate public facility ordinances. These slowdowns in development activity have also been compounded by the housing bust in more recent years and its negative impact on domestic migration to outer suburban locations.

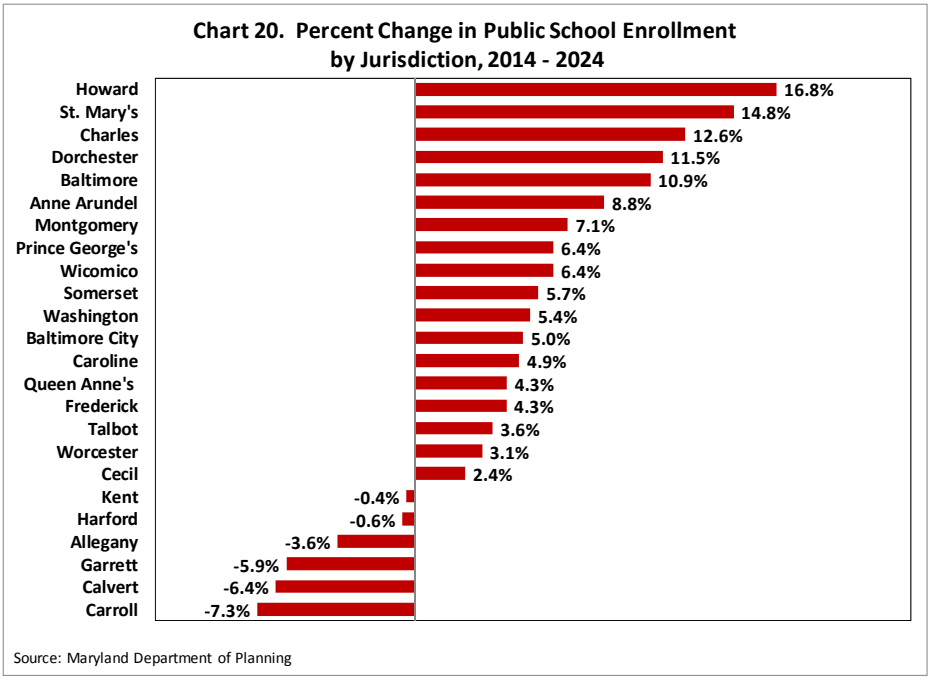

Chart 20. Percent Change in Public School Enrollment by Jurisdiction, 2014 - 2024

Source: Maryland Department of Planning

Calvert County is expected to have the second largest enrollment decline with an anticipated 2024 enrollment total around 1,000 (-6.4%) less than in 2014. The bulk of the declines in Calvert's enrollment are projected to take place in the first seven years and is a continuation of declines which have taken place over the last eight years (2007-2014), when the county's enrollment dropped by 1,480 (-8.6%). The recent decline corresponds with the county's slowdown in overall population growth. Calvert County was once Maryland's fastest growing jurisdiction, leading the state in the rate of population growth from 1990 to 2004. This growth was fueled mostly by migrants moving to the County from other parts of Maryland, chiefly Prince George's and Anne Arundel counties. Growth in the latter part of the 2000s slowed as the county reduced development capacity through down zoning as well as a more stringent adequate public facilities ordinance that restricted development because of over-crowded schools.

Garrett County is expected to have an enrollment total in 2024 that is about 220 (-5.9%) less than it was in 2014, while Allegany County's 2024 enrollment is anticipated to be just under 300 (-3.6%) lower than in 2014. Enrollment declines in Allegany and Garrett are a continuation of long-term trends for these two rural counties. For instance, in Allegany County (which has been losing household population since the 1950s), public school enrollment has declined in 36 out of the last 39 years through 2013 before growing by eight students in 2014, its first gain since 1994. For Garrett County, enrollment declines have been experienced in 34 out of the last 38 years. Over the next 10 years, annual declines ranging between 20 and 50 per year are expected through 2022 before the enrollment total stabilizes. For Allegany County, most of the cumulative losses are projected to occur in the 2018 to 2022 period.

The projected growth in Prince George's County over the next 10 years represents a turnaround from recent trends. Between 2003 and 2012, total enrollment in the county dropped by just under 15,600 (-11.7%). These enrollment declines occurred despite the fact that the county had the second largest numeric increase in population between 2000 and 2010. However, Prince George's did have the largest drop in the state in five to nine year olds (-9,600) and ten to fourteen year olds (-3,800) between 2000 and 2010, an indication of out migration of families with children during the course of the decade.[12] Growth in enrollment resumed in 2013 (1,360) for the first time since 2003 and continued in 2014 (2,288, the most since 1997). It is expected that a substantial number of births and continued foreign immigration will lead to a sustained enrollment turnaround over the next 10 years.[13]

B. Elementary School Enrollment

Twenty of twenty-four jurisdictions in Maryland are projected to achieve a peak in total elementary enrollment sometime during the next 10 years, the exceptions being Carroll, Calvert, Garrett and Queen Anne's. (See Tables 6, 7 and 8.) Ten of these jurisdictions are anticipated to achieve these peaks at the end of the projection period in 2024; while nine will peak before 2018 and one (Somerset) in 2023 before declining. In all, 11 jurisdictions are expected to have less elementary enrollment in 2024 than in 2014: Baltimore City and Carroll, Montgomery, Calvert, Allegany, Garrett, Caroline, Kent, Queen Anne's, Talbot and Dorchester counties.

In most jurisdictions, elementary enrollment growth began in 2007 when the transition to both full-day kindergarten (2007) as well as the new older age-eligibility requirements for kindergarten (2006) and first-grade (2007) students were completed. Although statewide

* Enrollment numbers in **bold** indicate years in which enrollment will peak.

Source: Actual 2014 from the Maryland Department of Education, "Statistics on Enrollment and Number of Schools Public and Non-Public, 2014."
Projections (2015-2024) prepared by the Maryland Department of Planning.

enrollment will be higher at the end of the 10-year projection period, the statewide total will actually peak in 2017, followed by three years of enrollment declines (2018-2020) before growth resumes again in 2021.

The largest gains in elementary enrollment over the ten-year period are expected to be in Howard (3,340, or 14.1%), Baltimore (1,883, or 3.6%), Charles (1,159, or 10.5%), Anne Arundel (874, or 2.3%) and Frederick (812, or 4.5%) counties. In addition, Prince George's is expected to have a gain of nearly 1,200 (2.0%), by 2016 before the declines begin which will leave 2024 totals only about 300 above 2014 levels.

In percentage terms, the largest gains are expected for Howard County (14.1%) in the Baltimore Region, Charles (10.5%) and St. Mary's (5.9%) in the Southern Maryland Region, Washington County (5.7%) in Western Maryland and Frederick County (4.5%) in the Washington Suburban Region. With the exception of Washington County, all have had relatively fast population growth so far this decade (in the context of an overall slower growing environment) and all have a history of attracting households with school-age children.

Baltimore City is projected to have the largest decline in elementary enrollment at the end of the 10-year projection period (-934, or -2.3%). However, declines will actually be greatest by 2020 at just over 1,700 (-4.2%) before growth resumes in the last four years.

Calvert County is expected to have the second largest numeric decline in elementary enrollment by the end of the 10-year projection period (-378, or -5.7%). But here too the cumulative loss is actually greater before the end of the 10-year period in 2020 when enrollment is expected to be just over 400 (-6.2%) below 2014 totals before growth resumes (sporadically) again.

Besides Calvert County, the largest percentage declines at the end of the 10-year projection period are expected for Garrett (-110, -6.4%) and Allegany (-239, -6.2%) counties in Western Maryland and Talbot (-111, -5.5%) and Caroline (-132, - 5.2%) counties on the Eastern Shore.

Montgomery, Carroll, Harford and Frederick counties are four other jurisdictions which are also expected to see fairly significant declines in the middle part of the projection period before growing again later on. For Montgomery County, losses will peak at around 1,600 (-2.3%) in 2020 before growth resumes leaving 2024 totals only around 200 below what they were in 2014. For Carroll, losses are expected to peak at around 1,250 (-11.5%, the largest of any jurisdiction during the 10-year projection period) by 2019, but growth after that will leave 2024 totals less than 100 below 2014 levels. For Harford County, elementary enrollment is projected to be down by just over 1,100 (-6.8%) in 2020 from 2014 levels before growing again, leaving 2024 totals nearly 100 above 2014. Frederick County elementary enrollment will have a complete turnaround from being 800 (-4.6%) below 2014 by 2019, to being 800 (4.5%) above 2014 by 2024.

C. Middle School Enrollment

As the tail end of the millennial population cohort transitioned out from their middle school years, middle school enrollment declined in eight out of nine years prior to 2013 before resuming sustained growth in 2013 (3,069, largest since 2002) and 2014 (2,333). Middle school enrollment is expected to continue to grow through 2020 before declines occur in the last four years of the projection period. Even with the declines in the last four years, middle school enrollment is expected to be higher in 15 of the 24 jurisdictions in 2024 compared to 2014 levels with most achieving their peak in 2019 or 2020. (See Tables 9, 10 and 11.)

The largest increases in middle school students at the end of the 10-year projection period are expected in Baltimore (2,904, or 12.4%), Montgomery (2,452, or 7.3%), Prince George's (1,774, or 6.6%), Anne Arundel (1,620, or 9.3%), and Howard (1,594, or 13.0%) counties. However, for these jurisdictions peak enrollment will occur before 2024 at a higher level with all but Howard peaking in 2020 and Howard in 2021. In Montgomery's case, the peak cumulative gain is expected to be 4,382 (13.1%) by 2020, 1,930 greater than its 2024 total. For Baltimore County, the peak cumulative change is expected to be 3,734 by 2020, about 800 greater than in 2024. The peak for Prince George's of just over 3,500 (13.1%) in 2020 is about double the expected difference between 2024 and 2014 (1,774, 6.6%). Anne Arundel's peak in 2020 (2,490) is anticipated to be a little more than 50 percent higher than at the end of the projection period, while Howard's peak in 2021 (1,674) will not be much different than in 2024 (1,594).

Carroll County (-1,019, or -16.9%) is expected to have the largest decline in middle school enrollment of the nine jurisdictions anticipated to have losses. Although losses are projected beginning in 2016, the bulk of Carroll County's decline is projected to occur in years 2020 through 2022.

The other relatively large declines are projected for Harford (-530, or -6.3%) and Calvert (-386, or -10.1%) counties. For Calvert, the net loss at the end of the 10-year period is a function of losses in seven out of the next 10 years, with only very modest gains for those years in which there are no losses. Harford County is actually expected to have a modest gain of just under 300 students by 2019 before sustained declines begin and continue through the end of the projection period.

D. High School Enrollment

Statewide high school enrollment is projected to move into a high growth period following seven years of decline (2007-2013) and a small gain in 2014 (447, the first since 2006). Growth over the 2015 to 2024 period will leave overall high school enrollment 39,459 (15.5%)

above 2014 levels.[14] The 2024 total of 293,350 would represent a new historical peak for high school enrollment in Maryland, exceeding the 2006 peak total of 272,575 by 20,775 (7.6%). Overall, eight jurisdictions in Maryland are expected to experience a peak in high school enrollment in 2022, six in 2023 and five in 2024. (See Tables 12, 13 and 14.)

Of the top five jurisdictions with the largest gains by the end of the projection period - Montgomery (8,437, or 18.5%), Baltimore County (6,805, or 22.0%), Prince George's (5,765, or 16.2%), Anne Arundel (4,308 or 19.0%) and Baltimore City (4,199 or 18.8%), three – Montgomery, Prince George's and Baltimore City are expected to peak in 2023 and have modest declines in 2024.

In general, high school enrollment is expected to be boosted by 7,950 students (2.8%) by 2024 from the raising of the age of compulsory attendance to age 17 by 2015 and then to age 18 by 2017. The biggest increment to high school enrollment is expected for Prince George's County (+2,540, or 6.6%), Baltimore County (+1,040, or 2.8%) and Baltimore City (+680 or 2.6%) over 2024 enrollment totals if the dropout age had been left at age 16.[15]

Only four jurisdictions are expected to have a lower high school enrollment total in 2024 than in 2014: Carroll (-762, or -9.0%), Calvert (-238, or -4.6%), Garrett (-100, or -8.7%) and Allegany (-20, or -0.8%) counties. Overall weak population growth over a number of years is responsible for these anticipated declines.

[14] Total high school enrollment is actually expected to peak in 2023 at 294,460 before declining by 1,100 in 2024.
[15] See the Methodology section for an explanation of how the increased age for compulsory attendance was incorporated into the projections.

Projections (2015-2024) prepared by the Maryland Department of Planning.

METHODOLOGY

The methodology used in preparing the enrollment projections involves an explicit effort to use the Maryland Department of Planning's latest age-specific population projections (July, 2014) for each political subdivision to guide the selection of key parameters used to develop grade-specific school enrollment projections. Thus, the age-specific population projections provide a starting point for deriving the public school enrollment projections.

Population Projections

Age-specific population projections for each jurisdiction are used to assist in estimating the following parameters relevant to the school enrollment projections:

1. The projected school age population (5-17 years old); and
2. Projected live births.

The historical relationship between the school age population (5-17 year olds) and total persons enrolled in school (both public and private) from the 1990 and 2000 censuses and the 2008-2010 American Community Survey is used in conjunction with the projected school age population to project a range of total school enrollment for each jurisdiction. The historical relationship between total (includes both public and private school enrollments) and public school enrollment is then combined with projected total school enrollment to derive a range of estimates of the projected public school enrollment for each jurisdiction. The range (high, middle and low) of projections of public school enrollment based on projected school age population are subsequently used as a guide in selecting the assumptions for the public school enrollment projections derived by the grade succession ratio methodology.

Grade Succession Projections

The grade succession ratio methodology requires historical data for each political subdivision on the number of live births and the number of children enrolled in public schools by grade. For the purpose of these projections, historical birth data for the years 1970-2013 and historical school enrollment data for the period 1975-2014 are analyzed.[1]

With the phase in of older age-eligibility requirements for kindergarten beginning with school year 2003 (and first grade for school year 2004), historic birth data by month was used, starting with calendar year 1998, to derive "kindergarten-eligible births" five years hence and "first grade-eligible births" six years hence. Students entering kindergarten in the fall of 2003 must have been age five by November 30, 2003. Age eligibility was raised by one month in the following three years until the 2006 school year, when students entering kindergarten were required to be age five by September 1,

[1] Birth data are from the Maryland Department of Health and Mental Hygiene. Since 1991, these data have been derived by geocoding the birth mother's address to the jurisdiction of residence.

2006 and age six by that date for the first grade. Thus, during the four-year phase in period (school years 2003-2006 for kindergarteners and 2004-2007 for first graders), only 11 months' worth of births were eligible for each school year.[2]

Besides historical data on the ratios of births and associated enrollment in kindergarten and first grade, historical grade succession ratios that reflect projected grade cohort survival for all other grades, from first to second grade and from eleventh to twelfth grade, are analyzed. Specific combinations of historic ratios are then selected that generate grade-specific school enrollment projections that are consistent with the range of school age population based projections of public school enrollment. The resulting grade-specific school enrollment projections combine the effects of:

1. Births in a given year which are eligible for subsequent kindergarten and first grade enrollment;
2. Mortality for school age children;
3. Net migration of school age children;
4. Net transfer of children between public and private schools;
5. Non-promotion of children to the next grade level; and
6. Dropouts in the later years of secondary school.

The grade succession methodology consists of several computational steps. First, the ratio of kindergarten and first grade enrollment for the historical period to enrollment-eligible live births five and six years previously to enrollment are calculated for each jurisdiction. These ratios reflect recent trends in both births and migration for children entering public schools. For example, where a jurisdiction's historical ratio of kindergarten and first grade enrollment to births is significantly less than one, this reflects either net outward migration of potentially eligible enrollees or a high proportion of private school enrollment (or some combination of the two). Where a jurisdiction's ratio is significantly greater than one, this reflects a net inward migration of school age children or a lower proportion of private school enrollment (or some combination of the two).

Based on the projected births and the anticipated future relationship between births and kindergarten as well as first grade enrollment, ratios are developed for the projection period (see tables in the report for each jurisdiction titled, "Ratio Kindergarten and First Grade to Births - Historical and Projected," where the projected ratios are for the 2015-2024 period and projected births are for 2014 to 2019).

By comparing the ratios for the projected years to the historical ratios of enrollment in kindergarten to births five years previously (as well as first grade enrollment to births six years previously), specific projected ratios of enrollment in kindergarten to births (and enrollment in first grade to births) are selected. (See "Ratio Kindergarten and First Grade to Births - Historical and Projected.") Additionally, implementation of full-day kindergarten by 2007 was specifically taken into account in selecting kindergarten to birth ratios.[3]

[2] For example, for the 2006 school year beginning in the fall of 2006, eligible births for kindergarten enrollment would be for the 11 months from October 2000 through September 1, 2001.

[3] It is also for this reason that first grade enrollment was projected using the ratio to births as opposed to the grade succession ratio of first grade to K.

For each jurisdiction, grade succession ratios for other than kindergarten and first grade are calculated by grade from enrollment in the preceding year for the historical years 1975-2014. (See tables in the report titled "Grade Succession Ratios - Historical," which show in the top section of the table the grade succession ratios for each pair of years.)

In the bottom section of these ratio tables are a series of constructed averages of two or more historical single-year ratios (e.g., average for the last two years, average last two years minus most recent year, etc). It should be noted that, for purposes of deriving reasonably unbiased grade succession ratios, the historical enrollment in special education and ungraded classes before school year 2004 are distributed among the graded students in proportion to the number of graded students in the respective elementary and secondary grades. This procedure helps to eliminate variations in the ratios from year to year due to changes in policy and practices with respect to ungraded and special education enrollment. Beginning in 2004, all public school special education and ungraded students are assigned a grade.

Using the projected ratios of kindergarten to births and first grade to births as shown in "Ratio Kindergarten and First Grade to Births - Historical and Projected", and the alternative grade succession ratios shown in the "Grade Succession Ratios – Historical" for grades two through twelve, alternative school enrollment projections are derived for each jurisdiction using the "grade succession" methodology. The actual grade succession ratios used for the school enrollment projections are noted at the bottom of each jurisdiction's "Grade Succession Ratios – Historical" page.

The process of selecting the grade succession ratios for each jurisdiction is aided by the comparison of the range of population-based projections of anticipated public school enrollment to the grade succession ratio based projections. The selected "grade succession" projection is the one that appears most reasonable given the projections of school age population and births and the trends in public school share of total (public and private) enrollment.

Beginning with the projections for 2013 to 2022, additional steps in the calculation of grade succession ratios were added to account for the passage of SB362 in the 2012 Maryland legislative session which raised the age for compulsory public school attendance in two stages: age 17 starting in July 1, 2015 and age 18 starting in July 1, 2017. Historical data on the number of dropouts by age by grade by jurisdiction were obtained from the Maryland State Department of Education for enrollment years 2009/2010 to 2013/2014. Due to the declines in the number of reported dropouts statewide, however, only data for the most recent year (2013/2014) of this five-year period was used.

The following are the assumptions and process used to account for the change in the age for compulsory public school attendance:

- The number of 2013/2014 dropouts (by age and grade) that no longer would be eligible to dropout with the new law are put back into the grade from which they dropped out[4]
- Each year the 2013/2014 dropouts are added to each grade. Each succeeding year, the

[4] It was assumed that 2.5 percent of the dropouts would qualify for the exemptions under the law and would still have dropped out. In other words, 97.5 percent of the dropouts were added back in to the appropriate grades.

dropouts are carried forward with the following assumptions:

- In the succeeding year, if they still are not eligible to drop out, assume 85 percent "succeed" to the next year.
- If they are now eligible to dropout, assume 50 percent do. Each additional year, each succeeding cohort is reduced by one-half.
- Cohorts are succeeded to age 19. Afterwards they are eliminated.

- A matrix of total dropouts are added by year out to the latest projection year

Note that the dropouts derived by the method described above are added in after the grade succession results. Thus, the dropouts are not subject at any time to the grade succession ratio process that applies to the rest of the enrollment. Accounting for the increased age of compulsory public school attendance results in an increase in high school enrollment by the last year of the projection period of just under three percent.

The actual process of using the various succession ratios to calculate the projected enrollment by grade for each jurisdiction is relatively straightforward. The ratio of kindergarten to births and first grade to births for the projected period is multiplied by the respective eligible births five and six years previously, respectively, to arrive at projected kindergarten and first-grade enrollment for 2015-2024.

Using the selected values for the succession ratios for grades two through twelve, current enrollees (2014) and projected new enrollment in each year (including first-grade students derived by the ratio with births six years prior) are succeeded from one grade to the next for each year in the projection period.[5] The resulting projections of school enrollment by grade, by year, for the years 2015 through 2024 for each county and Baltimore City appear in the body of this report.

[5] The kindergarten (and first grade) enrollment in "Ratio Kindergarten and First Grade to Births - Historical and Projected" include ungraded and special education enrollment prior to school year 2004 based on the distribution of these enrollment figures as shown in the "Grade Succession Ratios – Historical" tables.

ORGANIZATION OF DETAILED DATA TABLES

Sections

The body of this report consists of three sections containing statistical tables on historical and projected enrollment. The data are displayed for the State and each jurisdiction.

Section One: State of Maryland

Section Two: Baltimore City and the twenty-three counties (alphabetical)

Sections one and two include the detailed enrollment tables by grade for the State and the jurisdictions respectively.

Section Three: Summary of School Enrollment

Section three provides a summary for the State and 24 jurisdictions of the historical total public and public and private school enrollment figures for the 2004-2014 period as well as the projections of the total public school enrollment, 2015 -2024.

Tables

In each section, from four to six of the tables listed below are presented. In Section One, the first five tables are presented, in Section Two, all six tables are presented and in Section Three, the first four tables are presented.

1. Total (Public and Private) Historical Enrollments 2004-2014.
2. Percent of Total School Enrollment Public 2004-2014.
3. Public School Historical Enrollments 2004-2014.
4. Public School Enrollment Historical 2014 and Projected 2015-2024.
5. Ratio Kindergarten and First Grade to Births - Historical and Projected.
6. Grade Succession Ratios - Historical.

Several terms appear on the tables that require a brief explanation:

1. "Elem Special" – designates those pupils requiring special education due to handicaps;

2. "Other Ungraded" – designates those pupils assigned to no specific grade in the elementary grades;

3. "Sec Special" – designates those pupils in the secondary grades requiring special classes due to handicaps; and

4. "Other Sec Ungraded" – designates secondary pupils assigned to no specific grade in the secondary grades.

Note: starting with school year 2004, all public school special education students are assigned to a grade. Therefore, there are no public school "special" or "ungraded" students for years after 2003. For private schools, assignment of special or ungraded students to specific grades began in 2009.

Summary enrollment figures for elementary (grades K thru 5), middle (grades 6 thru 8) and high (grades 9 thru 12) schools also appear at the bottom of each of the first four tables along with a summary total of all secondary enrollment (grades 6 thru 12).

The listed historical grade succession ratios for grades 9 thru 12 do not reflect adjustments made to account for the increase in the age for compulsory public school attendance to age 17 starting in July 1, 2015 and to age 18 starting in July 1, 2017. See the Methodology section for an explanation of how adjustments to grade-succession derived enrollments were adjusted.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

State of Maryland data are the sum of the individual counties.

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** The percent of public total school enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** The percent of public total school enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** The percent of public total school enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** The percent of public total school enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**

Historical kindergarten and first grade enrollments through 2003 include graded students plus a proportional share of special and ungraded elementary students. Starting in 2004, all students are assigned to a specific grade.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

*** Total enrollment for years prior to 2008 are not comparable to years 2008 and later due to a change in the collection and processing of private school enrollment data by the Maryland State Department of Education. New procedures for collecting the self-reported private school enrollment data resulted in lower private school totals, and thus a higher percentage of total enrollment which is public after 2007 compared to prior years.**
