Public School Enrollment Projections, 2017-2026  
September 2017 Publication No. 2017-001

This Public School Enrollment Projections report was produced by the Projections and State Data Center of the Maryland Department of Planning as a service to local governments and planning officials.

## Foreword

This report, Public School Enrollment Projections, 2017-2026, is an update of the Maryland Department of Planning's annual report on public school enrollment statistics.

The report provides projections of public school enrollment through 2026 by grade for each of Maryland's jurisdictions (24 counties and Baltimore City). Statistics on actual total and public school enrollment for 2006-2016 are also included.

The public school enrollment projections utilize the Maryland Department of Planning's population projections by age and sex for each jurisdiction. The population projections are used to derive school-age population (persons 5-17 years of age) and projected births. These projections are then used in conjunction with a "grade succession" methodology to derive the ten-year, grade-specific enrollment projections.

A preliminary set of enrollment projections along with supporting materials documenting the projection methodology were sent previously to each School Superintendent and facility planner.

# Executive Summary

## Statewide Totals

Maryland's total public school enrollment increased in 2016 for the eighth consecutive year. (See Chart 1.) The 6,747 (0.8%) student gain in 2016 was higher than the 4,442 (0.5%) increase in 2015. Over the last eight years, total public school enrollment has grown by just under 38,000, or 4.6 percent. These gains are attributed in part to a smaller share of students attending private schools as well as an increase in births in the last few years

Chart 1. Historical Annual Change in Total Public School Enrollment in Maryland, 2007 - 2016

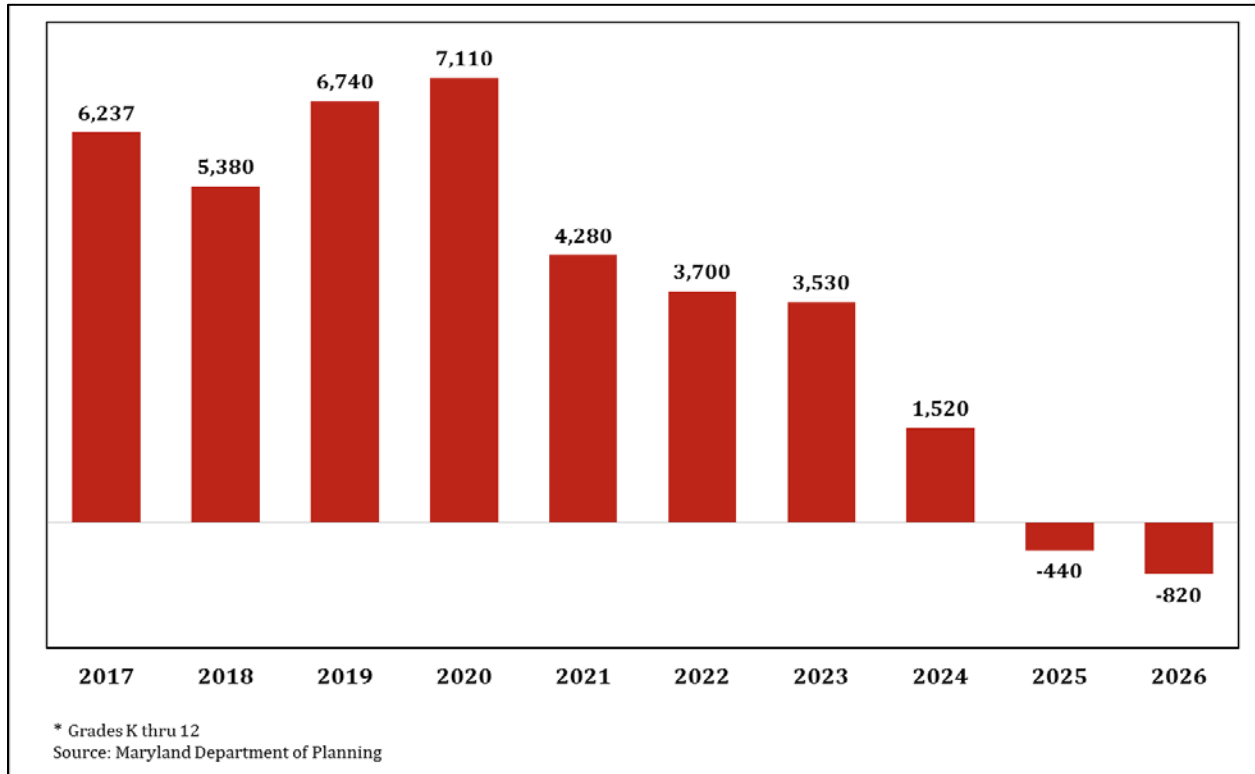

With gains over the last eight years (which followed five straight years of losses), Maryland's 2016 public school enrollment of 854,913 is highest it has ever been since 1976. Since 2000, public school enrollment peaked in 2003 at 847,722 and declined every year for the next five years until 2008. The reduction from the peak total in 2003 to the low point in 2008 (816,963) was due mostly to smaller cumulative birth cohorts<sup>1</sup> as well as fairly strong domestic out migration in the early and middle part of the 2000s that were not fully compensated for by gains from foreign immigration.

The Maryland Department of Planning has projected Maryland's annual public school enrollment over the next ten years (2017 to 2026). Total public school enrollment is projected to increase over the next eight years and decline slightly over the last two years. The most substantial growth will occur from 2017 to 2020 (See Chart 2.) The smaller growth after 2020 is due to the smaller number of births which occurred during and after the Great Recession.

<sup>1</sup> Cumulative births are the sum of births for 13 consecutive years that would comprise the enrollment in the school system from K to 12th grade.

Chart 2. Projected Annual Change in Total Public School Enrollment in Maryland, 2017 - 2026

Total public school enrollment in 2026 is projected to be 892,150, or 37,327 (4.4%) more than in 2016. (See Table 1.) The enrollments would peak in 2024 and decline slightly over the next couple of years.

Table 1. Summary of Historical and Projected Public School Enrollment for Maryland

Enrollment by School Type for Selected Years

School	Actual 2006	Actual 2011	Actual 2016	Projected 2021	Projected 2026	Peak Year	Peak Total

Source: Maryland Department of Education (2006, 2011 and 2016).

Enrollment numbers are rounded to nearest tenth

Projections (2017-2026) prepared by the Maryland Department of Planning.

Elementary school enrollment (grades K through 5) is projected decline for the first five years of the projection period, coinciding with the decline in births that happened during the end of last decade and the beginning of the current decade. Growth resumes again in 2022 and continues through 2026 (See Chart 3). Even with the initial decline and growth in the later years, the 10-year projection period shows elementary school enrollment would be flat (a slight decline of -466 or -0.1%) from 2016 to 2026.

Chart 3. Projected Annual Change in Public Elementary School Enrollment in Maryland, 2017 - 2026

Middle school enrollment (grades 6 through 8) is projected to grow substantially between 2016 and 2020, and decline from 2021 to 2025 and increase marginally in 2026. The projected growth over the next four years is a continuation of substantial gains that began in 2013 after declines in all but one year (2011) between 2004 and 2012. Enrollment for the 2016 to 2026 period is projected to increase by nearly 7,500 (3.8%). The declining enrollments from 2021 to 2025 were mostly due to the lower births during the Great Recession (See Chart 4)

High school enrollment (grades 9 through 12) is projected to be 30,246 (or 11.8%) higher in 2026 compared to 2016, leading to a new peak total in 2024 for Maryland. High school enrollment had a small decline in 2015 (-996), before enrollments increased by more than 2,700 (1.1%) in 2016. Growth is anticipated to be much more substantial beginning in 2017, aided by the raising of the age of compulsory public school attendance from age 16 to age 17 in 2015 and to age 18 in 2016-2017 years.<sup>2</sup> Growth will be strongest from 2016 through 2024, with a small part of this increase due to the final raising of the age of compulsory attendance to age 18 by 2017. (See Chart 5.)

<sup>2</sup> This policy change is described further in the Methodology section.

Chart 4. Projected Annual Change in Public Middle School Enrollment in Maryland, 2017 - 2026

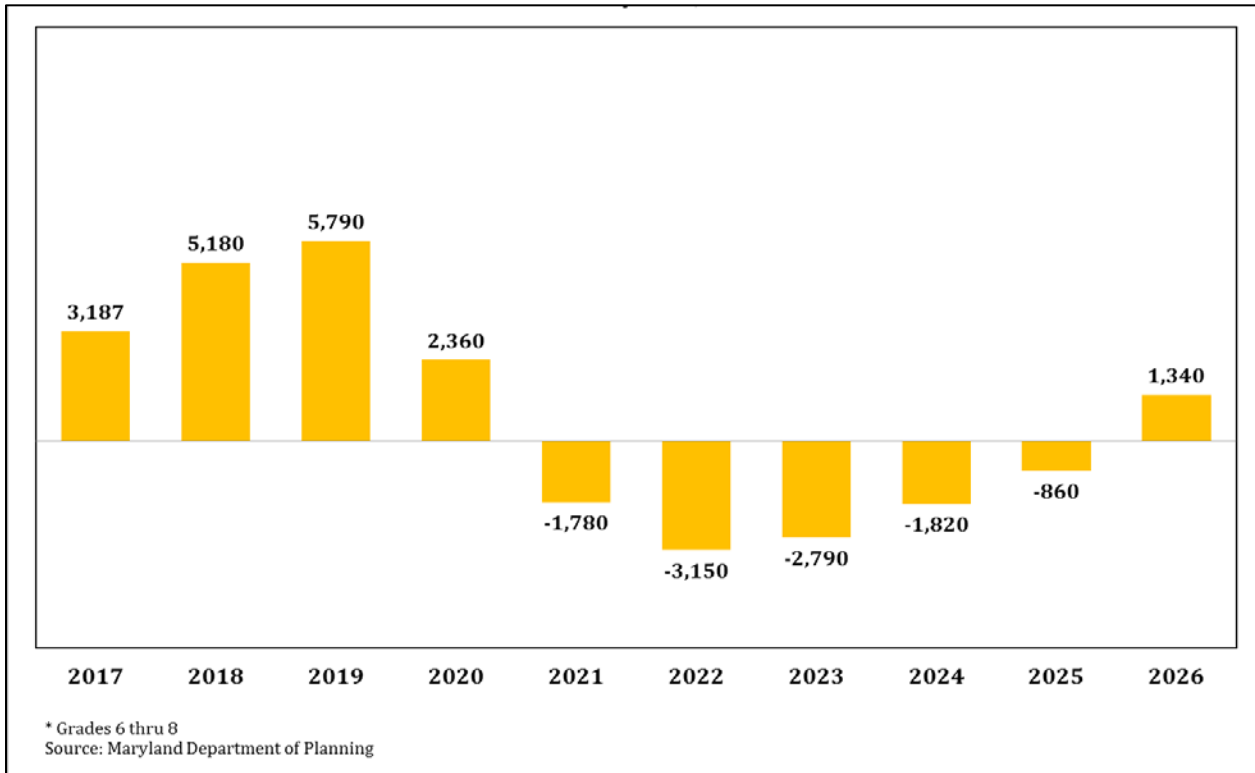

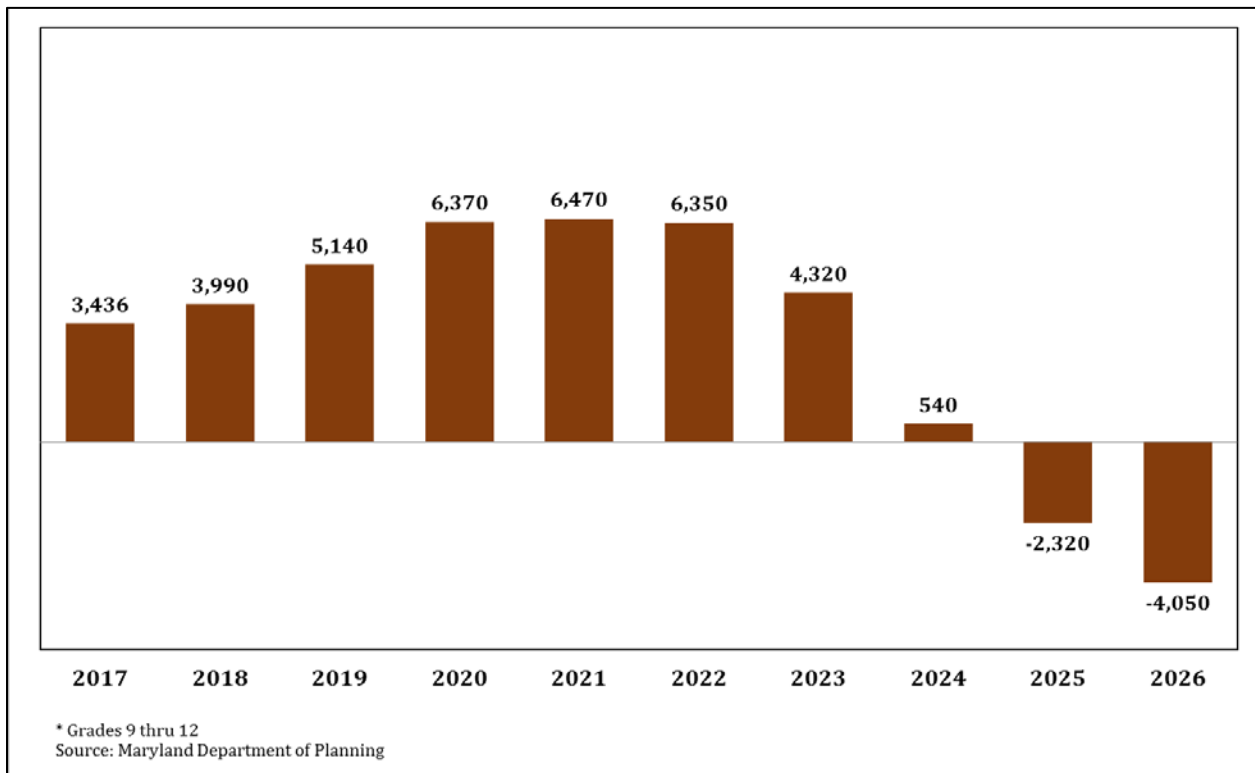

Chart 5. Projected Annual Change in Public High School Enrollment in Maryland, 2017 -2026

## Jurisdiction Trends

Fifteen of Maryland's 24 jurisdictions are expected to have a larger enrollment in 2026 compared to 2016. The largest numeric increases are anticipated for **Howard** (8,422), **Montgomery** (7,940), **Baltimore** (7,454), **Prince George's** (5,927) and **Anne Arundel** (5,144) **counties**, while the largest percentage increases are seen for **Howard** (15.5%), **Dorchester** (11.6%), **St. Mary's** (9.0%), **Charles** (7.6%), and **Baltimore** (6.9%) **counties**. (See Table 2.)

**Howard** (2,671), Prince **George's** (1,064), **St. Mary's** (385), **Frederick** (241) and **Garrett** (132) **counties** are expected to have the five largest numeric increases in elementary enrollment by the end of the 10-year period. Fifteen jurisdictions are expected to have less elementary enrollment in 2026 than in 2016, with the largest decline in **Baltimore City** (-2,404, or -6.1%) followed by **Harford** (-931, or -5.6%) and **Montgomery** (-773, or -1.1%) **counties**.

The largest percentage increases for elementary school enrollment are expected to be in **Howard** (10.8%), **Garrett** (8.1%) and **St. Mary's** (4.7%) **counties**.

**Prince George's** (2,042), **Baltimore** (1,948), **Howard** (1,785), **Montgomery** (1,273) and **Anne Arundel** (1,160) **counties** are expected to have the largest middle school enrollment gains over the next 10 years. For all jurisdictions except **Howard County**, middle school enrollment will peak before the end of the 10-year period. Only two jurisdictions are expected to have lower middle school enrollment in 2026 compared to 2016, with the largest decline projected for **Carroll County** (-847, or -14.2%).

The largest percentage increases for middle school enrollment between 2016 and 2026 are anticipated for **Howard** (13.8%), **Dorchester** (13.0%), **St. Mary's** (11.3%), and **Charles** (10.6%) **counties**. Except for **Howard County** whose peak year was the end projection year of 2026, all jurisdictions had peak enrollment before 2026.

The five largest numeric increases in high school enrollment over the 10-year projection period are seen for **Montgomery** (7,440), **Baltimore** (5,733), **Anne Arundel** (4,032), **Howard** (3,966) and **Prince George's** (1,064) **counties**. The largest high school enrollment gains will occur in the middle of the projection period. For four of the five jurisdictions with the largest increase, the bulk of the increases will be during the 2018 to 2023, while **Howard County** is expected to have its highest high school enrollment in 2026. Five jurisdictions are expected to have smaller high school enrollments at the end of the 10-year projection period compared to 2016, with the largest declines anticipated for **Carroll County** (-1,038, -12.5%).

The largest percentage increases in high school enrollment are projected for **Dorchester** (32.9%), **Howard** (23.6%), **Baltimore** (18.4%), **Anne Arundel** (17.6%) and **Charles** (15.6%) **counties**.

## Long-Term Statewide Demographic Perspective

Over the last four decades Maryland's public school enrollment for elementary, middle and high schools has experienced both significant expansions and contractions. These repeating patterns of growth and decline have been driven by the State's demographic changes - principally in the number of births and in the quantity and direction of net migration.

Chart 6 depicts Maryland's historical and projected growth for total public school enrollment, from 1970 to 2026. Total public school enrollment in Maryland experienced its low point in 1985 (at 663,100) and from there peaked in 2016 at 854,913 students, a gain of 191,813, or 28.9 percent, over this 31-year period. It is expected that the modest decline between 2003<sup>3</sup> and 2008 will be followed by growth from 2009 through 2024 and a slight decline from 2024 to 2026. The gains are projected to be strong between 2017 and 2020. From the trough in 2008, public school enrollments are projected to peak in 2024 with an increase of 76,447 (or 9.4%).

The decline between 1971 and 1985, the gain between 1985 and 2003, the decline between 2003 and 2008, and the subsequent expansion from 2009 and beyond, can largely be explained by what was happening and what is expected to happen to births and net migration in Maryland.

Chart 6. Total Public School Enrollment in Maryland, Historical and Projected, 1970 - 2026

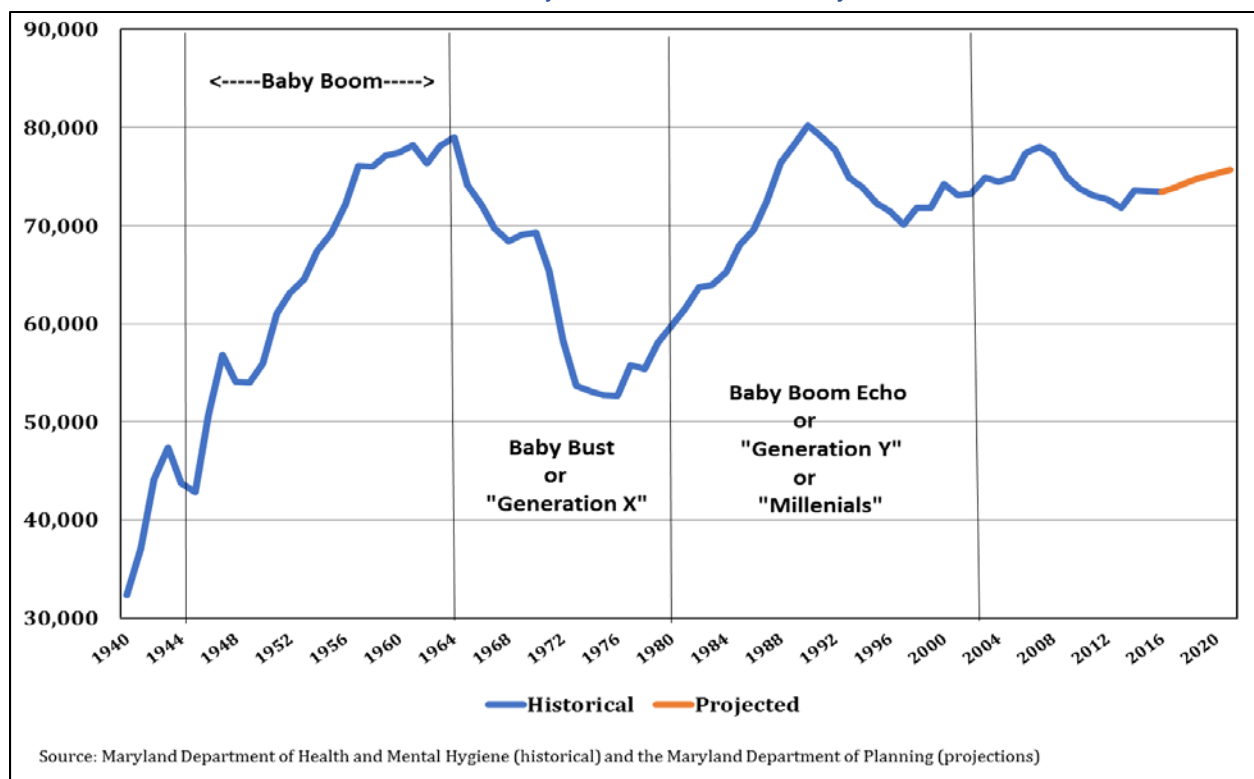

<sup>3</sup> Although the 2024 projected total is being measured against the last peak in 2003, total public school enrollment was actually higher in 1971 (919,782). Projected 2024 totals are around 26,400 (-2.9%) below the 1971 enrollment.

## Births

Maryland's births began to decline after the peak of the baby boom in 1964, and bottomed out in 1976. From 1978 to 1990 births steadily increased, with the 1990 peak births (80,199) even exceeding the highest total number of births in the peak baby boom year (79,003 in 1964). (See Chart 7.) The difference in the total number of births between these low and high points was rather dramatic, with the 1990 peak births of 80,199 just over 27,500 (or 52.3%) greater than the number of births which occurred in 1976. Births declined from the 1990 peak to a low of 70,151 in 1997, a drop of just over 10,000, and then generally rose until peaking again in 2007 at just over 78,000. The total number of births began to decline once again in 2008 with the advent of the Great Recession. Although the Great recession officially ended in June of 2009, the subsequent slow recovery was a factor in the continued declines in births through 2015 (73,546, the last year of actual data), which were the lowest total since 2000 (74,226).<sup>4</sup> Total births in 2015 increased from the low of 2013 (births in 2013 were the lowest since 1997) and are projected to average around 74,650 per year over the 2016 to 2021 period (corresponding with the enrollment years of 2017 to 2026)

Chart 7. Total Births in Maryland, Historical and Projected, 1940 - 2021

More importantly than births in any one year, however, is the cumulative number of births over a 13-year period that would constitute the potential enrollment pool for grades K through 12 for a specific school year. Cumulative births by year (those who are roughly between the ages of 5 and 17 for any given school year) reached a low point in 1989 at just under 754,200 and later peaked at 972,400 in 2005 (a difference of over 218,000) (See Chart 8). Cumulative birth totals declined by nearly 21,100 between 2005 and 2010 but began to grow again in 2011. Cumulative births are projected to be flat during the initial part of the projection period and then decline slightly during the later part of the projection period (See Chart 9).<sup>5</sup> These decreases in cumulative births in the later part of the projection years correspond directly with the slightly lower enrollment projections in the last couple of years.

<sup>4</sup> Economic downturns and periods of economic uncertainty tend to reduce overall fertility rates.

<sup>5</sup> All cumulative birth totals have been adjusted to account for the changing kindergarten age eligibility requirements that were phased in between 2003 and 2006.

Chart 8. Cumulative Births by School Year in in Maryland Historical & Projected, 1970 - 2026

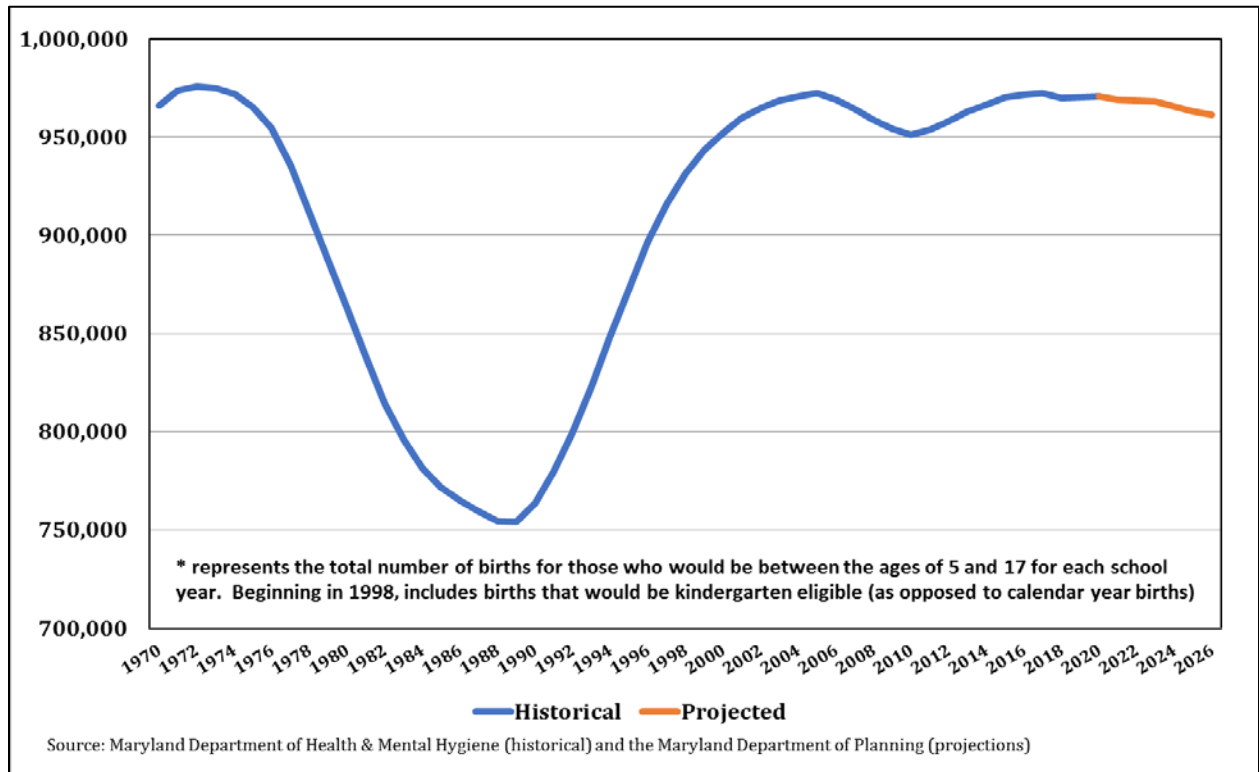

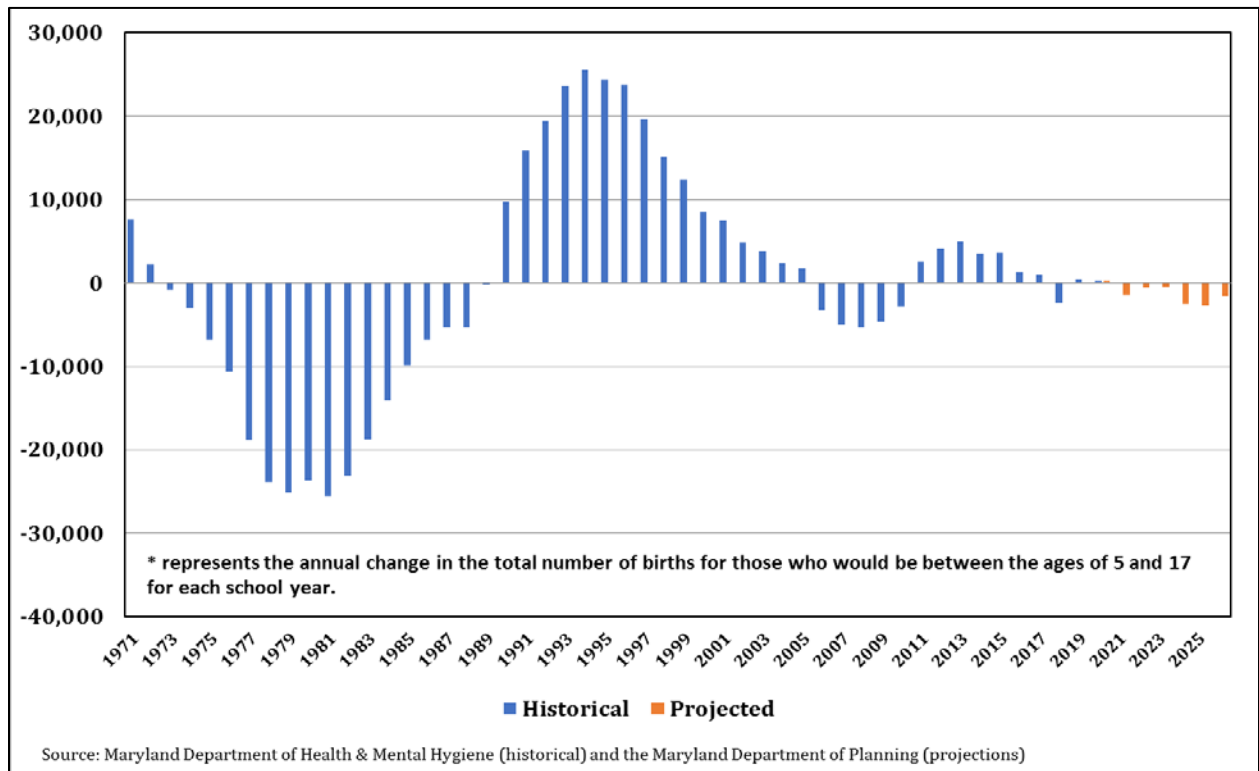

Chart 9. Annual Change in Cumulative Births by School Year in Maryland, Historical & Projected 1971 - 2026

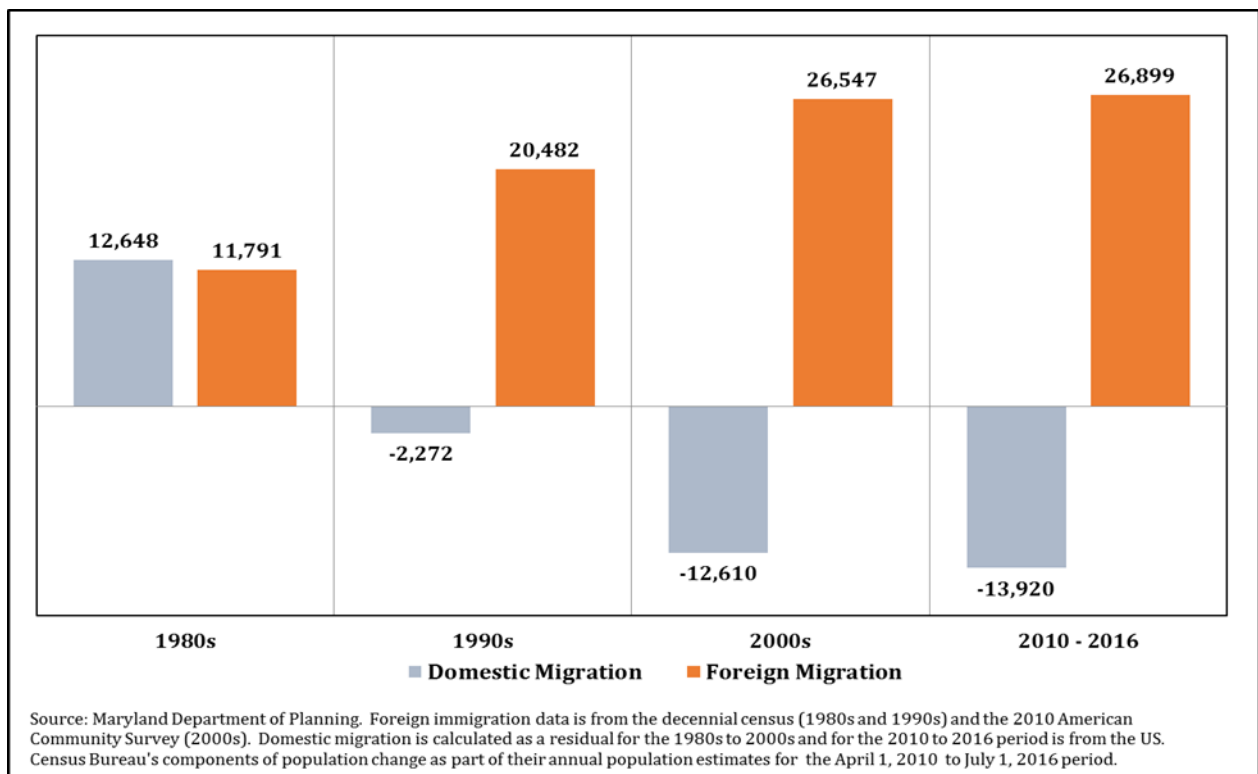

## Domestic Migration and Foreign Immigration

The number of births is only one aspect of the enrollment picture in that it represents “resident recorded births,” (i.e., births associated with female residents in Maryland.) Over the years, the potential students associated with resident recorded births can be either be reduced or increased in number depending on what happens with net migration. Additionally, the percent that attend private school can influence public school enrollment. Net migration is the difference between the inflows and outflows of domestic migration plus the gains from foreign immigration.

Net migration, which could affect the number of school-age kids directly or through the addition or subtraction of young adults that would eventually have school-age kids, has fluctuated markedly over the last couple of decades. This fluctuation has typically been tied to the relative health of the state’s economy, but in the latter part of the 2000s before the Great Recession, was also significantly affected by the higher cost of housing in Maryland compared to neighboring states.

Chart 10 below illustrates the estimated average annual net domestic migration and foreign immigration over the last three plus decades. For much of the 1980s, Maryland had one of the stronger economies in the country which resulted in the State averaging gains from net domestic migration of over 12,600 per year. The two decades that followed saw, on average, net domestic out migration for Maryland with the average outflow in the 2000s (-12,610) much larger than the 1990s average (-2,272). Post 2010 annual net domestic migration is estimated to be higher than in the 2000s (-13,920).

Chart 10. Annualized Net Domestic Migration and Foreign Immigration into Maryland

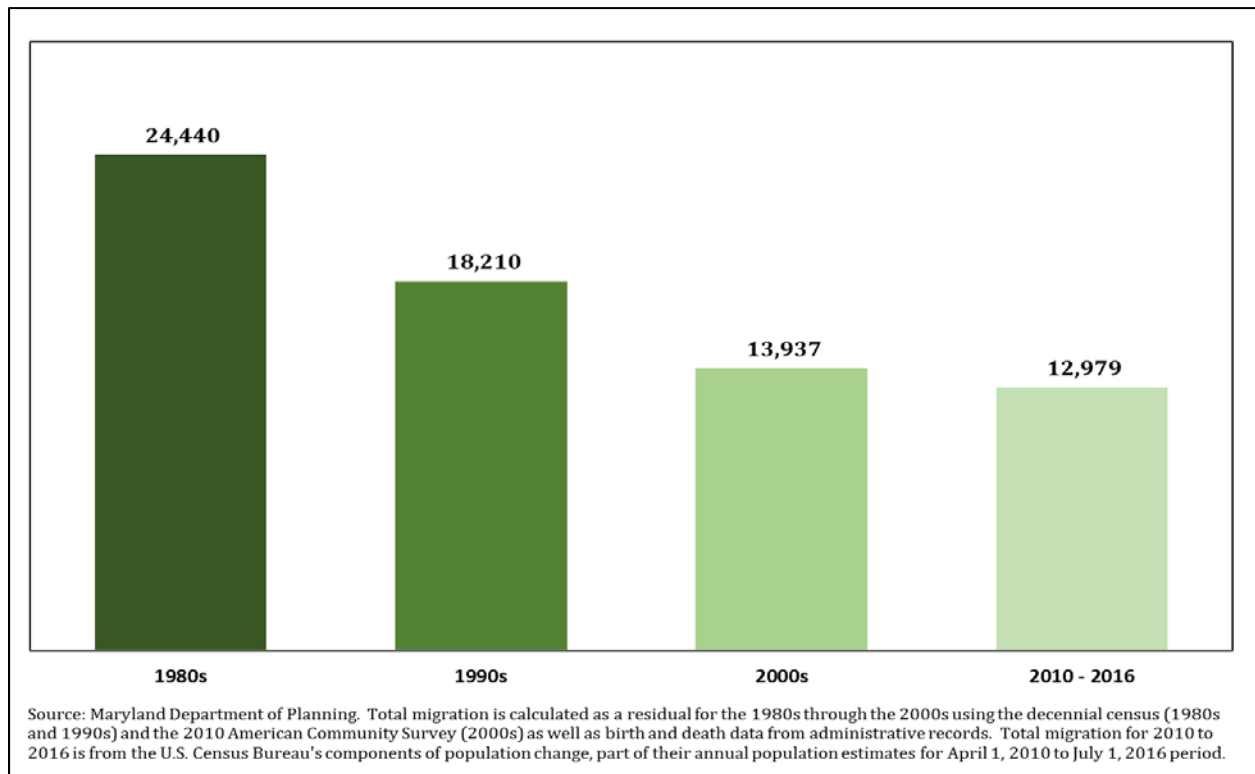

The outflow in the 2000s was due in part to the effects of the expanding “housing bubble” that developed in the mid part of the decade. As prices began to rise at a rapid rate, Maryland saw an increase in the number of its residents moving to bordering states (particularly to Pennsylvania) where housing costs were lower. The collapse of the housing price bubble, along with job losses in every part of the country, severely curtailed this out migration and Maryland’s overall net domestic out migration shrank dramatically after 2008, even turning positive in 2010 and 2011. This led to larger overall population gains for Maryland after 2008 compared to the mid-part of the 2000 to 2010 decade. Net domestic outmigration, however, did begin to pick up again over the last three years as both the job and housing markets improved.

While Maryland’s net domestic migration has fluctuated over the last three plus decades, foreign immigration has steadily risen. The average annual gain in the 2000s of just over 26,500 residents per year was more than double the average gain over the 1980s and 29.6 percent greater than in the 1990s. The annual estimates for the current decade through July 1, 2016 (26,900) are a bit ahead of what occurred in the 2000s.

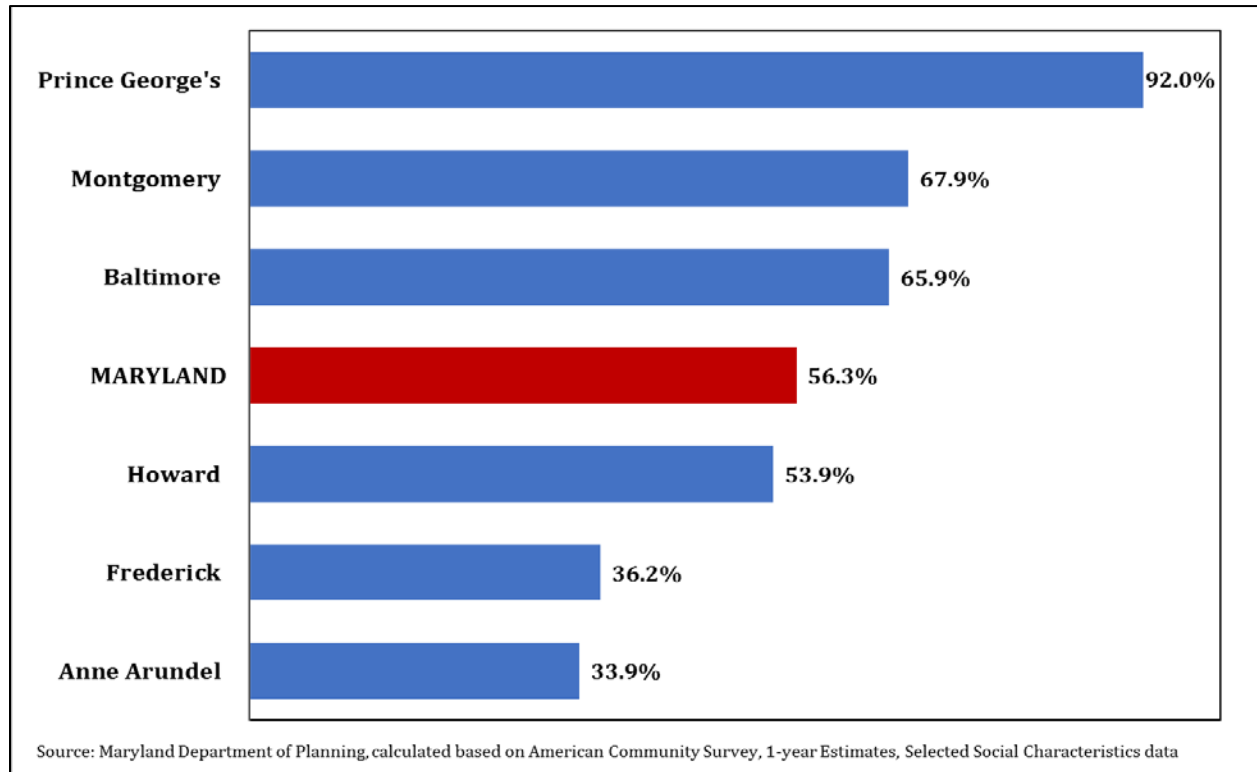

Despite the large increase in foreign immigration in the 2000s, Maryland experienced larger net domestic out migration. Therefore, the total annual migration (domestic and foreign) gains in the 2000s of just over 13,900 per year was well below the total gains of the 1990s and 1980s (See Chart 11.) Continued strong gains from foreign immigration along with reduced domestic out migration have yielded an increase in total migration over the 2010 to 2016 period (12,979).

Chart 11. Annualized Total Net Migration for Maryland

Immigrants (the foreign born) have been an important source of population growth statewide since 2000. The increase in foreign born, between 2000 and 2015 represents 56.3 percent of the growth in the state's population. The foreign born are an even more significant component of overall population growth for several of Maryland's jurisdictions: 67.9 percent in **Montgomery County**, 92 percent in **Prince George's County** and 65.9 percent in **Baltimore County**. Over half of **Howard County's** population gains between 2000 and 2015 also come from the foreign born (See Chart 12).

Chart 12. Increase in Foreign Born as a Percent of Change in Total Population, 2000 - 2015

From a statewide perspective, negative domestic migration and gains from foreign immigration have been an important factor in increased minority enrollment. The largest gains in public school enrollment from 2000 to 2016 were among Hispanic and Asian students, while non-Hispanic white enrollment declined significantly. (See Charts 13 and 14.) The share of non-Hispanic white students enrolled in Maryland public schools declined from 53.6 percent of total enrollment in 2000 to 38.6 percent in 2016.<sup>6</sup> In the same period, 2000 to 2016, the Hispanic share of public school enrollment rose from 4.7 percent to 16.3 percent. (See Chart 15.)

<sup>6</sup> Maryland first became a "majority minority" public school system in 2004 when non-Hispanic whites were 49.8 percent of statewide enrollment.

Chart 13. Change in Total Public School Enrollment in Maryland by Race & Hispanic Origin, 2000 - 2016

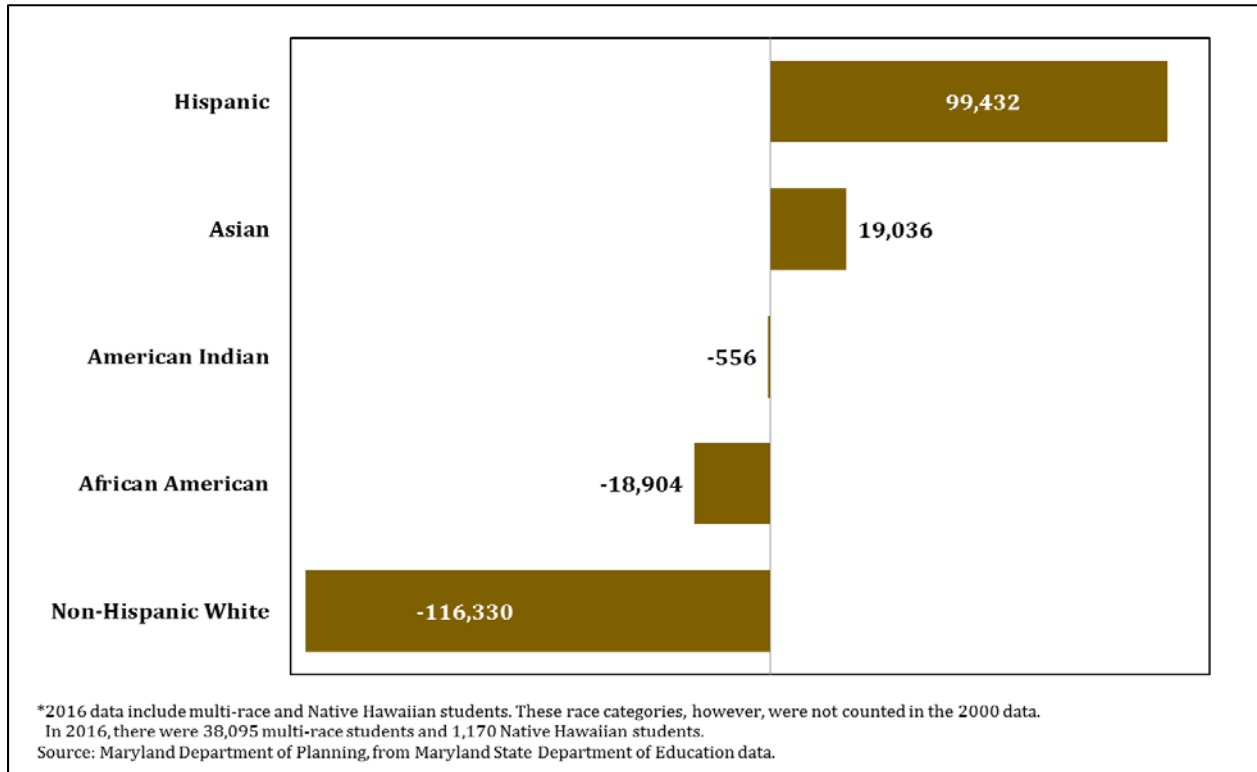

Chart 14. Percent Change in Total Public School Enrollment in Maryland by Race & Hispanic Origin 2000 - 2016

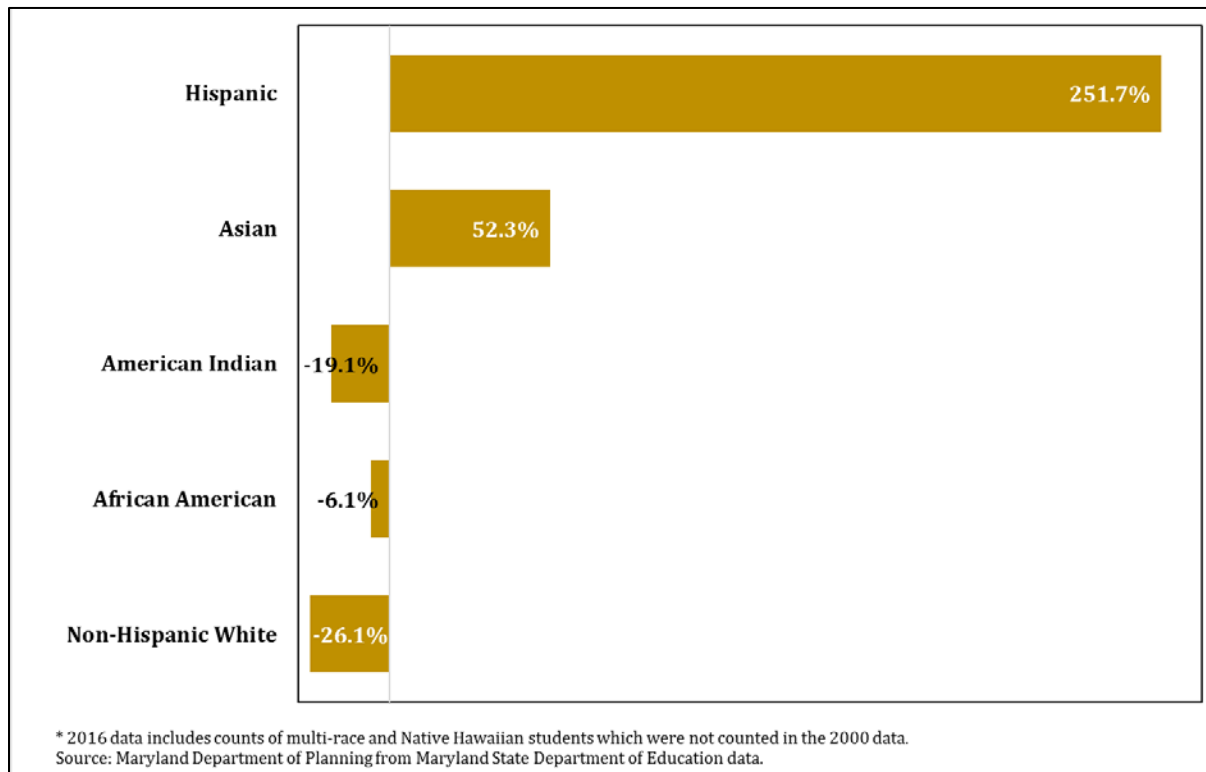

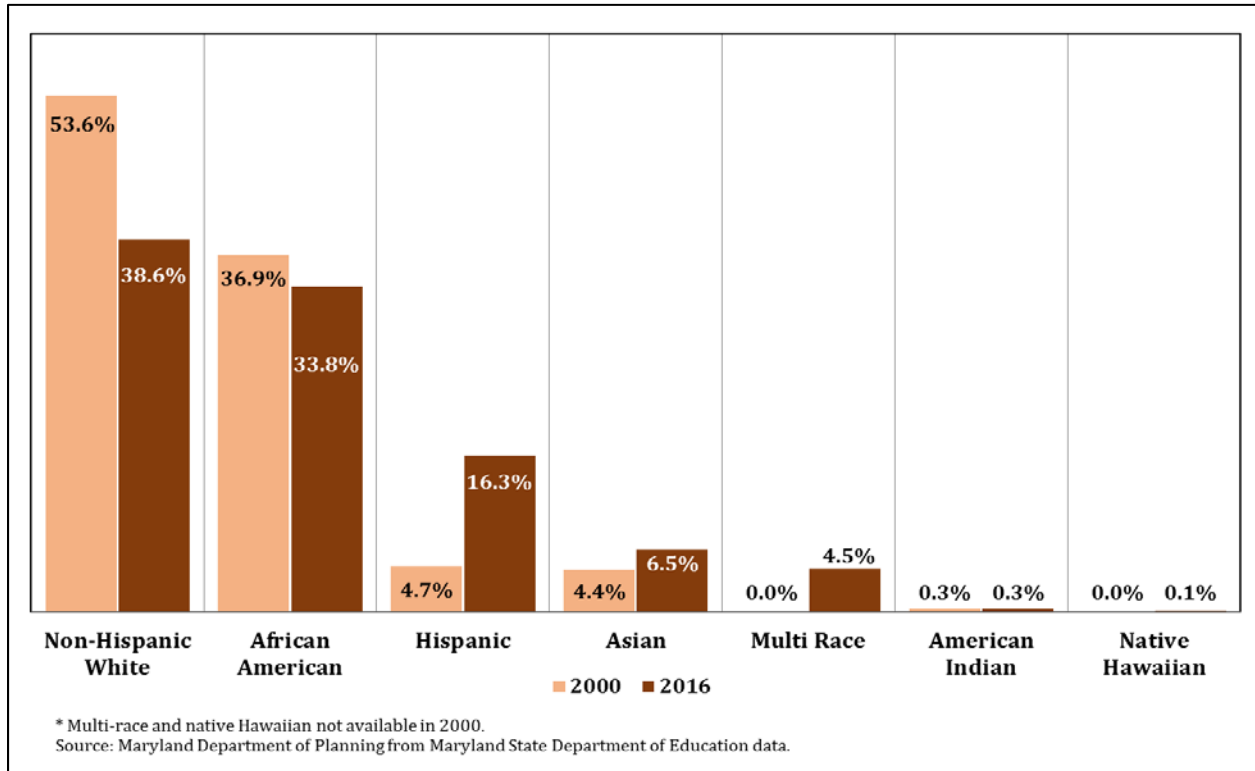

Chart 15. Share of Total Public School Enrollment in Maryland by Race & Hispanic Origin  
2000 and 2016

## Intra-State Migration

While foreign immigration has been an important source of population growth for the inner suburban counties like **Montgomery**, **Prince George’s** and **Baltimore** since the 1990s, intra-state migration, the movement of people from one Maryland county to another, has been a key element in the growth of many of the outer suburban and more rural counties. The patterns of these intra-state migration flows have typically been from the inner suburban counties to contiguous outer suburban counties and from outer suburban counties to more rural counties. For example, out migration from **Montgomery** and **Prince George’s counties** increased the total population and school enrollments in many outer suburban jurisdictions, including, **Calvert**, **Charles**, **Frederick** and **Howard counties**. During the middle part of the 2000 to 2010 period there was evidence of a third wave of suburbanization into exurban counties. In this case, increasing population gains from intra-state migration were realized by **Washington County** (primarily from **Frederick** and **Montgomery counties**) and **Cecil County** (primarily from **Harford County**), although these movements substantially slowed with the collapse of the housing bubble in the latter part of the decade and have not yet resumed to any great extent through 2016.

## Public/Private Enrollment Share

Besides the number of births, domestic migration and foreign immigration flows, another important factor in determining public school enrollment is the percentage of all students which attend public versus private schools. Unfortunately, data on K through 12 private school enrollment for the last nine school years (2008 – 2016) are not directly comparable to prior years or even to each other and thus it is not possible to establish an historical trend through the current school year. This is because the Maryland State Department of Education, which generates the non-public school enrollment data, switched to an online survey of private schools in 2008 (from a mail-out/mail-back survey) which resulted in a much lower response rate than in prior years. Moreover, participation in the survey is voluntary and is not subject to a thorough verification and audit process.

What the data does show is that K-12 private school enrollment “dropped” from 131,441 in 2007 to 104,030 in 2008, the first year of the online survey. This pushed the overall public school share of total enrollment (public plus private) to 88.7 percent, a jump of 2.5 percentage points from 2007, and the highest on record up to that point. (See in Appendix A-3, Percent of School Enrollment in Public Schools, 2006-2016.) Prior to 2008, the highest public share on record over the last couple of decades was 87.2 percent in 1991. Data since 2008 indicate that private school enrollment rose to 109,994 in 2010 and then dropped by a total of 13,161 (-12.0%) in the six succeeding years, falling to 96,763 by 2016. As a result, the public share of total enrollment has increased from 88.2 percent in 2010 to 89.8 percent in 2016, the highest post 2008 share.

While it is entirely reasonable that private school enrollment dropped in 2008 (and the public share increased) due to the economic hardships brought about by the Great Recession, it is nearly impossible to verify the magnitude of this drop. Likewise, the magnitude of the drop in private school enrollment between 2010 and 2016 is difficult to verify, but certainly, if true, may be a factor in the growth in public school enrollment over the last several years.<sup>7</sup>

---

<sup>7</sup> Also a factor in the decline of private school enrollment is the closing of 13 parochial schools by the Catholic Archdiocese of Baltimore, effective with the school year starting in September 2010. Ten of these schools were in **Baltimore City** and three in **Baltimore County** with a total of 2,152 students. Affected students were offered a guaranteed spot in a school no more than five miles from their current school.

## Trends and Projections in Public School Enrollment by Type

The Maryland Department of Planning's statewide and jurisdiction population and birth projections form the basis for the projected school enrollment. Stronger growth in total enrollment is anticipated over the next five years before enrollment growth slows down a bit over the remaining five years of the school enrollment projection period (2017 through 2026).

The following describes the trends and projections of total public school enrollment and by school type.

### Total Public School Enrollment

Public school enrollment is expected to undergo an average annual increase of 6,370 from 2017 to 2020 and 3,260 over the next four years (2021 to 2024). In the last two years of the projection period (2025 and 2026) public school enrollment would fall by an average of 630 students each year. The main driver of annual enrollment during the projection period is the change in cumulative births, i.e., the sum of births over successive 13-year periods that correspond to individual K-12 enrollment years. There is a small decline in cumulative births in the initial part of the projection period (2017 to 2020), but these declines start to increase in the later part of the projection period (2021 to 2024). In the final two years of the projection period (2025 and 2026) cumulative births are projected to decline about 2,150 per year. These lower cumulative births lead to a slight decrease in school enrollments from 2025.

One factor which could affect enrollment totals over the next 10 years is the relative health of the state's economy compared to the rest of the United States. Although Maryland's economy was less affected by the Great Recession than most other states, its recovery has lagged most states. The anticipated employment gains to the state from the Base Realignment and Closure (BRAC) process, completed<sup>8</sup> by the end of 2011, were stalled due to federal budget sequestration (2013), which resulted in across the board automatic spending cuts. If federal personnel and procurement budgets are severely cut over the next decade or so, the State could be disproportionately affected given the number of federal employees living in Maryland and the very high federal per capita expenditures captured by Maryland firms. If Maryland's job growth continues to be below national rates (as it was in 2016) this could negatively influence potential population gains through domestic migration flows.

### Public Elementary School Enrollment (grades K through 5)

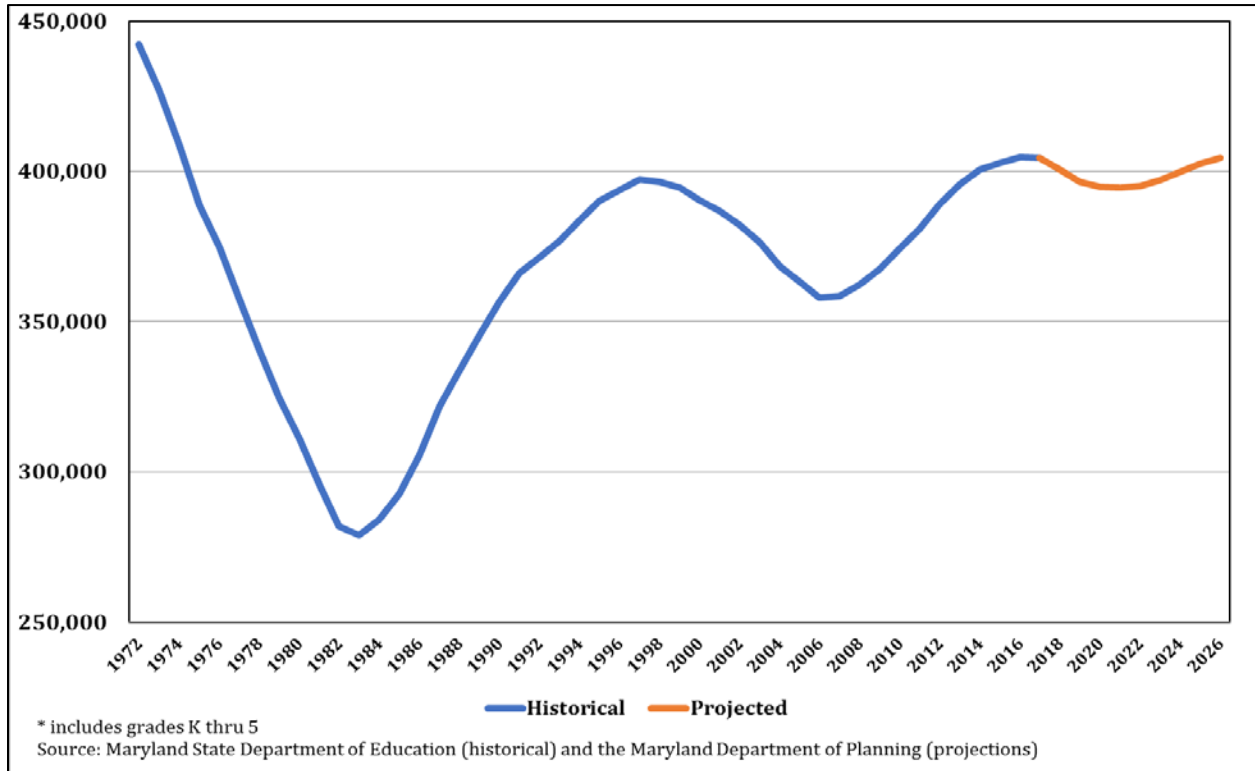

Public elementary school enrollment (grades K-5) dropped by nearly 163,300 students (-36.9%) between 1972 and 1983, the low point over the past several decades. (See Chart 16.) This decline in elementary school enrollment is explained by the transition from the youngest baby boomers (baby boomers are those born between 1946 and 1964) to Generation X (those born in a period of declining births, 1965-1982). The baby bust generation was followed, in turn, by the larger baby "boomlet" cohorts (sometimes called "Generation Y," the "baby-boom echo" or more recently and perhaps finally "millennials") resulting in an 118,300 (42.4%) increase in elementary enrollment from 1983 to 1997. Lower numbers of births after the peak in 1990 resulted in a decline in elementary school enrollment from 1997 through 2006 of nearly 39,300 (-9.9%) yielding a total enrollment of just under 358,000. Elementary enrollment began to grow again in 2007, and averaged 4,700 new students each year since 2007, with the gain in 2012 (8,291) the largest in the state since 1991.

---

<sup>8</sup> This "completion" refers to the movement of federal government employees, but not necessarily the associated contractor jobs.

Chart 16. Public Elementary School Enrollment in Maryland, Historical and Projected, 1972 - 2026

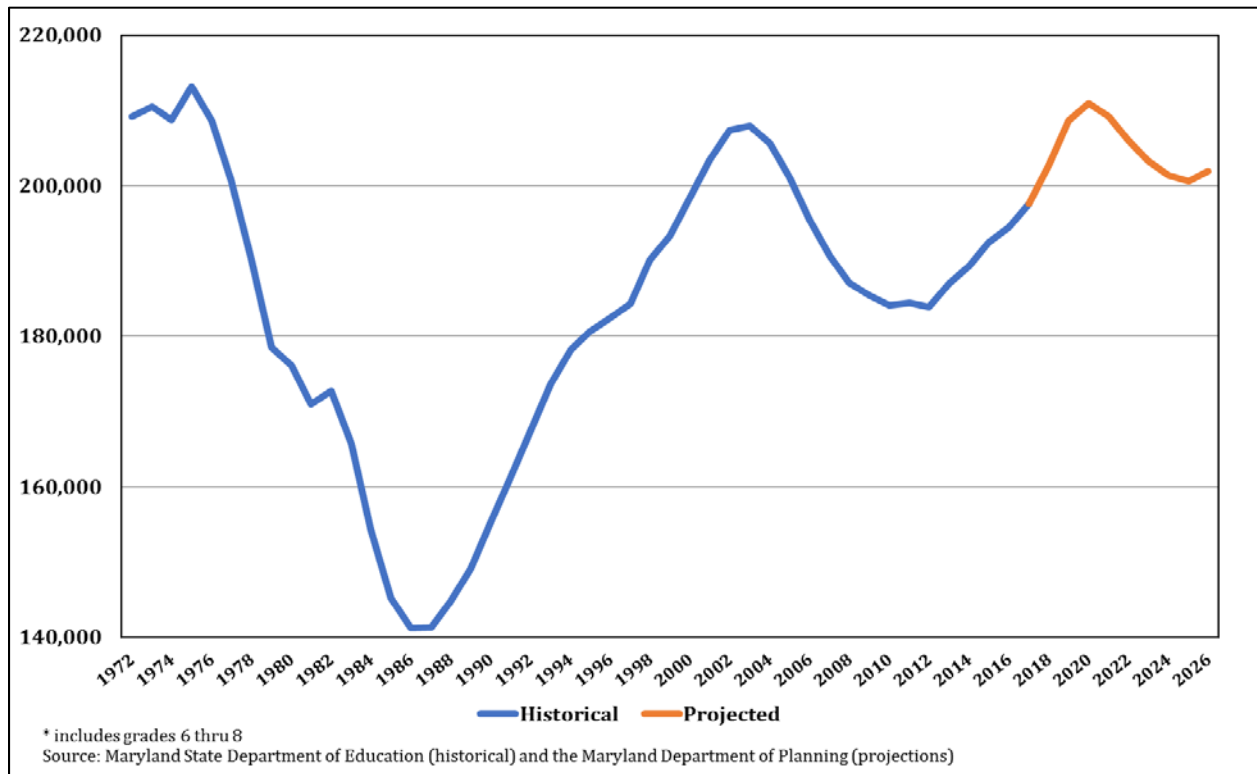

Annual gains in elementary school enrollment have been declining since 2012, the increase in 2016 was the smallest in the last nine years. Enrollments in elementary schools are projected to decline from 2017 through 2021 before elementary enrollment begins to grow again in 2022. (See Chart 3 in the Executive Summary.) Birth patterns, as well as changing “K to birth” and “first grade to birth” ratios<sup>9</sup> all play a part in this “U-shaped” growth pattern. At the end of this pattern of gains, losses and gains again over the next years, elementary enrollment in 2026 is projected to be 404,400, or about 466 (-0.1%) below 2016.

### Public Middle School Enrollment (grades 6 through 8)

Public middle school (grades 6-8) enrollment changes follow elementary school enrollment patterns with only the age of the students accounting for the different trough and peak years (See Chart 17.) From 1975 to its low point in 1986, public middle school enrollment fell by nearly 72,000 students (-33.7%) driven by the same demographic trends as described for elementary school students. Middle school enrollment grew steadily between 1986 and 2003, peaking at just under 208,000 students in 2003, for a gain of 66,800 students, or 47.3 percent. Statewide, middle school enrollment declined by nearly 24,100 (-11.6%) between 2003 and 2012 with only a small gain in 2011 (391) interrupting annual losses in the 2004 to 2012 period.

<sup>9</sup> These ratios are described further in the Methodology section.

Chart 17. Public Middle School Enrollment in Maryland, Historical and Projected, 1972 - 2026

Sustained annual middle school enrollment gains returned in 2013 (3,069), and continued for the next three years: 2014 (2,333), 2015 (3,179), the highest increase since 2002, and in 2016 (1,940). Middle school enrollments are expected to increase over the next four years as larger enrollments in elementary school, which started in 2007, begin to make their presence felt at the middle school level, they are projected to peak in 2020<sup>10</sup> (See Chart 4 in the Executive Summary). Middle school enrollment is projected to decline over a five-year period (2021 to 2025) and expected to increase slightly in 2026.

### Public High School Enrollment (grades 9 through 12)

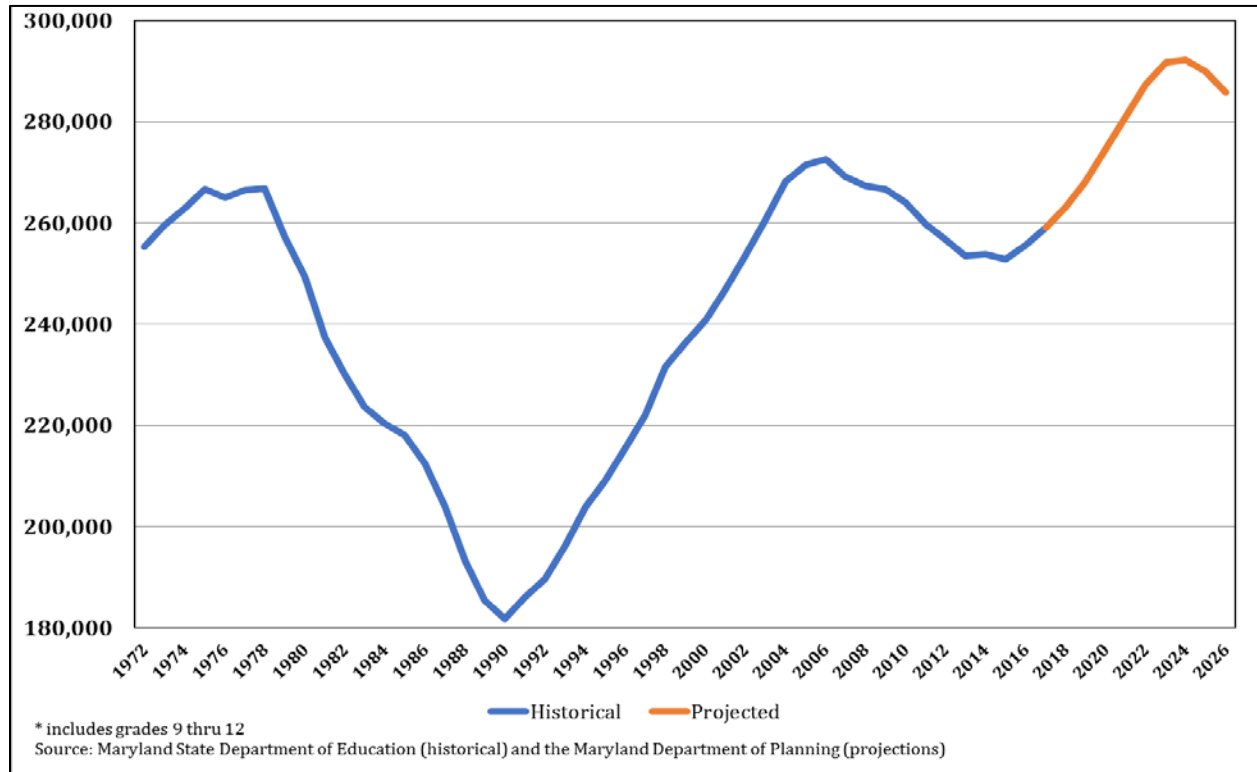

Growth in public high school enrollment (grades 9-12) is anticipated to follow the same peak-to-trough-to-peak cycle as elementary and middle school enrollment but “shifted to the right” while also being boosted by the two-step increase in age of compulsory attendance<sup>11</sup>. (See Chart 18.) Decades ago, public high school enrollment peaked in 1978 at 266,850 students with the tail end of the baby boomer generation, and then declined by nearly 85,000 students (-31.8%) through 1990. Steady growth followed after 1990, reaching a new peak total of 272,575 in 2006, a nearly 90,700 (49.8%) gain from the low point in 1990. Public high school enrollment declined in 2007 for the first time since 1990 and continued to drop through 2015, with only a slight increase in 2014 (447), an overall decline of almost 19,700 or (-7.2%) from 2007 to 2015. However, 2016 marks positive growth in high school enrollment with an increase of 2,729 students.

<sup>10</sup> The peak for middle school enrollment during the projection period is expected in 2020, at nearly 16,500 students (8.5%) above 2016 levels.

<sup>11</sup> This policy change is described further in the methodology section.

Total public high school enrollment will grow significantly in the first eight years of the projection period to nearly 30,246 (11.8%) above 2016 levels in 2024, before declining by 2,320 in 2025 and by 4,050 in 2026. (See Chart 5 in the Executive Summary.) It is estimated that the rise in the legal drop out age will increase overall high school enrollment by 0.5 percent statewide in 2017. Part of the expected increase next year in 2011 of almost 1,200 students is the result of the anticipated impact of raising the age of compulsory public school attendance from age 16 to 17 in that year. The 2024 total high school enrollment (292,240) will be a new peak enrollment, exceeding the 272,575 enrollment of 2006. A small portion of this overall growth will be due to the final increase in the age of compulsory attendance to age 18 by 2017. It is estimated that the new age requirements will boost high school totals by 1.8 percent by 2026.

Chart 18. Public High School Enrollment in Maryland, Historical and Projected, 1972 - 2026

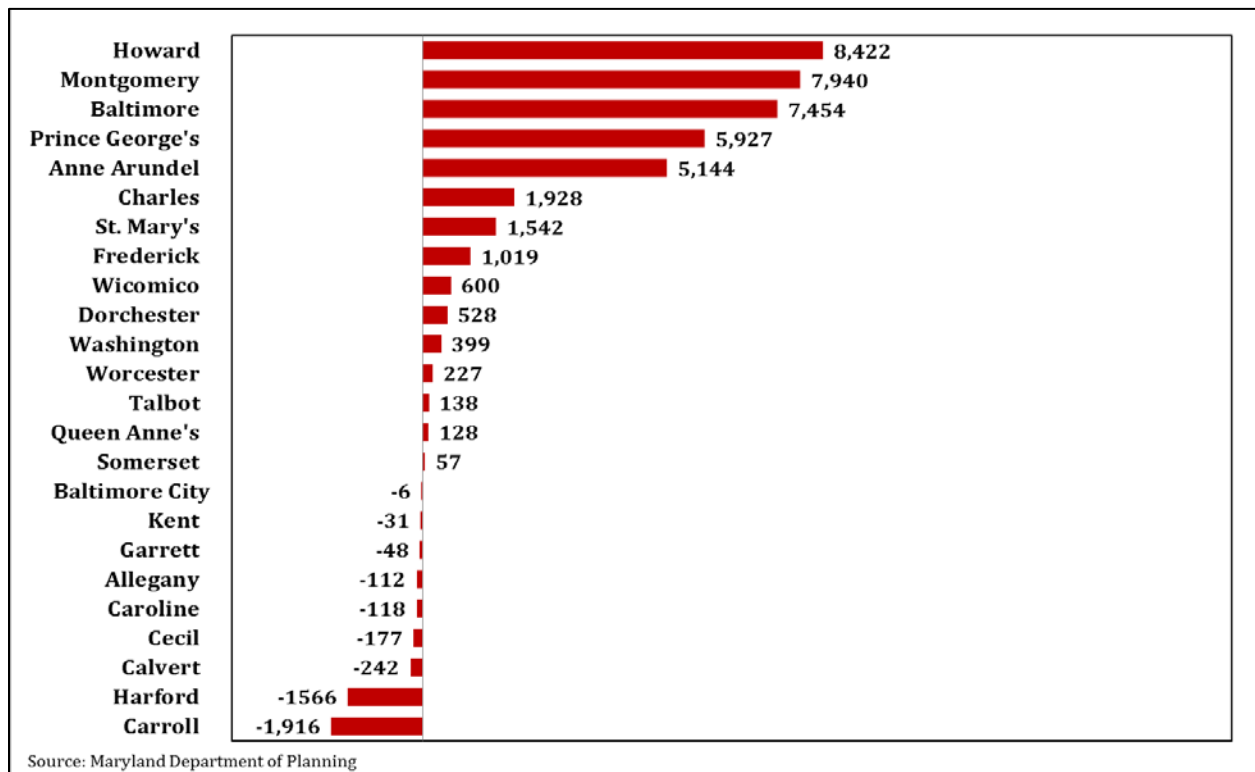

## Jurisdiction Projections over the Next 10 Years

### Total Enrollment

With statewide enrollment projected to grow each year over the next 10 years, all but six jurisdictions – **Carroll, Harford, Calvert, Garrett, Cecil** and **Kent** – are projected to have their highest enrollment totals sometime over the next ten years, while these counties plus **Baltimore City, Allegany** and **Caroline, counties** will have lower enrollments in 2026 than in 2016. (See Tables 3, 4 and 5.) Ninety-four percent of the total statewide net gain between 2016 and 2026 is likely to occur in five of Maryland’s 24 jurisdictions: **Howard** (8,422), **Montgomery** (7,940), **Baltimore** (7,454), **Prince George’s** (5,927) and **Anne Arundel** (5,144) **counties** (See Chart 20).

Chart 19. Change in Public School Enrollment by Jurisdiction, 2016 - 2026

The source of this enrollment growth will vary by jurisdiction. For example, growth in **Montgomery County’s** schools is being fueled mostly through gains from foreign immigration over the years as the County captured nearly three out of ten (28%) new immigrants to Maryland during the 2000 to 2015 period.<sup>12</sup> At the same time, domestic outmigration from **Montgomery County** is driving school enrollment increases in **Frederick County**, which will experience the eighth largest gain in the state.

<sup>12</sup> Estimate derived by comparing foreign born totals for Maryland and **Montgomery County** from the 2000 Census and the 2015 American Community Survey

Source: Actual 2016 from the Maryland Department of Education, "Statistics on Enrollment and Number of Schools Public and Non-Public, 2016." Projections (2017-2026) prepared by the Maryland Department of Planning

Foreign immigration is also an important source of new residents – and thus new enrollment for **Prince George's County**, which was the destination of just under one of four (24.5%) new immigrants into the state between 2000 and 2015. In turn, out migrants from **Prince George's County** are a major source of enrollment growth for **Charles County**, which will experience the sixth largest numeric increase over the projection period.

Outmigration from **Baltimore City**, as well as population gains from foreign immigration, are important components of enrollment growth in **Baltimore County**. Outmigration from **Charles County**, and to a lesser extent **Prince George's County**, has been a source of enrollment growth for **St. Mary's County**. **Anne Arundel County**, which has one of the stronger economies in the state due to it being a major recipient of BRAC jobs in addition to other planned expansions at Ft. Meade involving cyber security, has been attracting migrants from both within and outside of Maryland. **Howard County's** enrollment growth is largely fueled by increases in minority population – particularly Asians and Hispanics - and is impacted from both growing foreign immigration as well as domestic migration gains from other jurisdictions in Maryland due to its reputation for having a quality school system.

Growth in **Baltimore City's** public school enrollment, is projected to effectively remain unchanged over the 10-year period, enrollments are projected to increase modestly till 2022 and from then are projected to decline every year after, offsetting the gains. The City experienced 13 straight years of declines, losing nearly 30,700 students (-28.3%) between 1994 and 2007. The projected reversal of the City's historical enrollment decline is attributable in part to more school choice options for City residents due to the increase in the number of charter schools; improved school quality as measured by standardized test scores; and, better high school retention rates. In addition, the closing of 13 parochial schools in **Baltimore City** and **Baltimore County** beginning in the 2010 school year left those who desire such an education with fewer options.<sup>13</sup>

The greatest percentage increase over the next 10 years is projected for **Howard County** (15.5%). With strong overall population growth along with an attractive school system for those locating in Maryland with school-age children, **Howard County** has had gains in total enrollment for 32 consecutive years (since 1984), the longest period without a decline. In the Southern Maryland Region, **St. Mary's** (9.0%) and **Charles** (7.6); **Dorchester County** (11.6%) in the Lower Eastern Shore Region and **Baltimore County** (6.9%) are projected to have large percentage increases. (See Chart 20 and Table 5.)

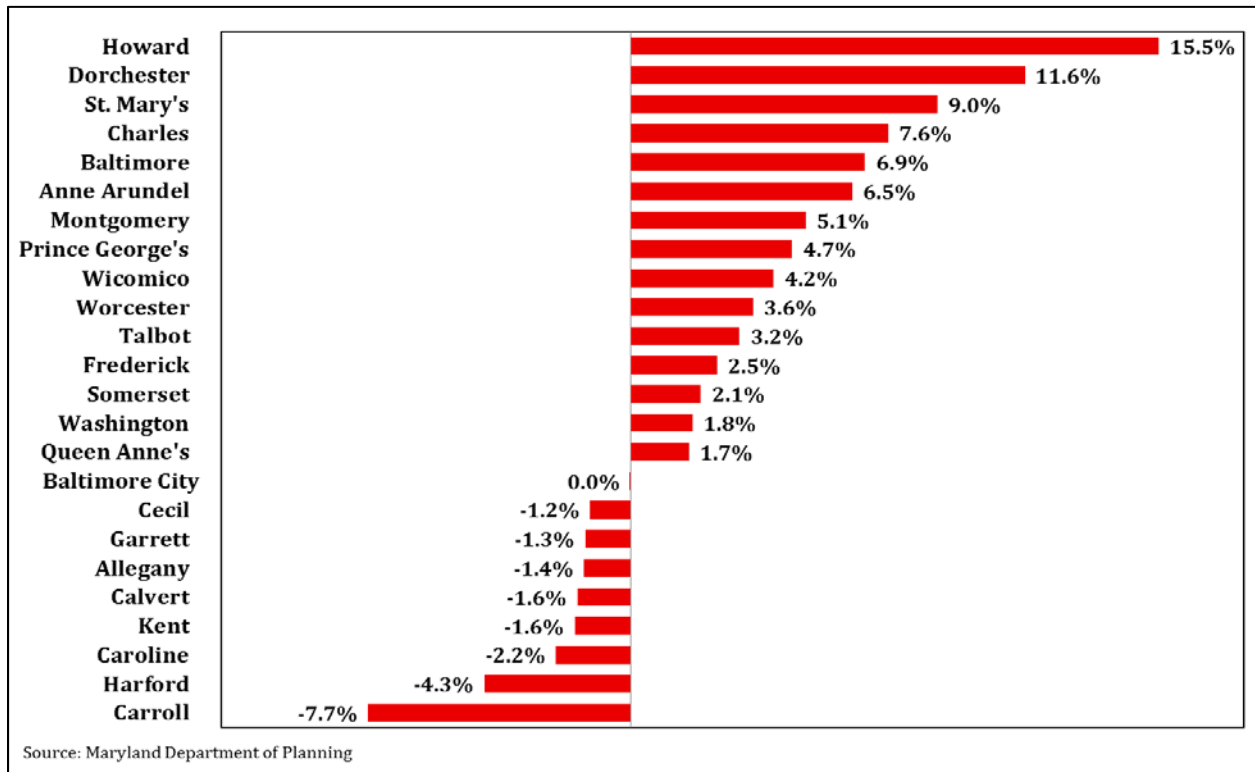

Of the six jurisdictions which are expected to have lower enrollment totals in 2026 than in 2016, the largest numeric and percentage decline is anticipated for **Carroll County** (-1,916, or -7.7%). The projected decline for **Carroll County** is a continuation of recent trends, where the once fast-growing suburban jurisdiction has lost 3,480 students (-12.3%) over the last ten years. These drops in enrollment are a product of the substantial slowdown in residential growth in the County during the last eight to 10 years caused by both a moratorium on new residential activity, after some very strong growth in the early 2000s, and development restrictions due to adequate public facility ordinances. These slowdowns in development activity have also been compounded by the housing bust in more recent years and its negative impact on domestic migration to outer suburban locations.

---

<sup>13</sup> The slowing of overall population losses in the late 2000s and an overall population gain of just under 1,700 between 2010 and 2014 was probably also a factor in the City's enrollment growth.

Chart 20. Percent Change in Public School Enrollment by Jurisdiction, 2016 - 2026

**Harford County** is expected to have the second largest enrollment decline since 2016 with an anticipated 2026 enrollment total of 1,566 (-4.3%) less than in 2016. The declines in **Harford's** enrollment are projected to happen almost every year except 2019 and are a continuation of declines which have taken place over the last 11 years (2006-2016). Over that time period **Harford County** saw an increase in enrollments in only one year (2009). The recent decline corresponds with the county's slowdown in overall population growth. **Calvert County's** enrollments are projected to decline by 242 from 2016 to 2026. **Calvert County** was once Maryland's fastest growing jurisdiction, leading the state in the rate of population growth from 1990 to 2004. This growth was fueled mostly by migrants moving to the County from other parts of Maryland, chiefly **Prince George's** and **Anne Arundel counties**. Growth in the latter part of the 2000s slowed as the county reduced development capacity through down zoning as well as a more stringent adequate public facilities ordinance that restricted development because of over-crowded schools.

**Garrett County** is expected to have an enrollment total in 2026 that is about 48 (-1.3%) less than it was in 2016, while **Allegany County's** 2026 enrollment is anticipated to be around 112 (-1.4%) lower than in 2016. Enrollment declines in **Allegany** and **Garrett** are a continuation of long-term trends for these two rural counties. For instance, in **Allegany County** (which has been losing household population since the 1950s), public school enrollment has declined in 37 out of the last 40 years through 2013 before growing by eight students in 2014, its first gain since 1994. In **Garrett County** enrollment declined in 35 out of the last 39 years. **Garrett County's** annual enrollments vary between minor gains and losses from 2016 to 2026.

The projected growth in **Prince George's County** over the next 10 years represents a turnaround from recent trends. Between 2003 and 2012, total enrollment in the county dropped by just under 15,600 (-11.7%). These enrollment declines occurred despite the fact that the county had the second largest numeric increase in population between 2000 and 2010. However, **Prince George's** did have the largest drop in the state in five to nine year-olds (-9,600) and ten to fourteen year-olds (-3,800) between 2000 and 2010, an

indication of out migration of families with children during the course of the decade.<sup>14</sup> Annual school enrollment increased every from 2013, with the increase in 2014 (2,288), being the highest since 1997. It is expected that a substantial number of births and continued foreign immigration will lead to a sustained enrollment turnaround over the next 10 years.<sup>15</sup>

## Elementary School Enrollment

Thirteen of twenty-four jurisdictions in Maryland are projected to achieve a peak in total elementary enrollment sometime during the next 10 years (2017-2026), while the peak year for enrollment is 2016 for the remaining nine counties (See Tables 6, 7 and 8). Eight jurisdictions are anticipated to achieve peak enrollments at the end of the projection period in 2026; while six will peak in 2017. In all, 15 jurisdictions are expected to have less elementary enrollment in 2026 than in 2016: **Anne Arundel, Baltimore, Carroll, Harford, Baltimore City, Montgomery, Charles, Allegany, Washington, Caroline, Cecil, Queen Anne's, Talbot, Dorchester** and **Somerset counties**.

In most jurisdictions, elementary enrollment growth began in 2007 when the transition to both full-day kindergarten (2007) as well as the new older age-eligibility requirements for kindergarten (2006) and first-grade (2007) students were completed. Although statewide enrollment will be higher at the end of the 10-year projection period, the statewide total will actually decline from 2017 to 2021, followed by five years of enrollment increases from 2022 to 2026.

The largest gains in elementary enrollment over the ten-year period are expected to be in **Howard County** (2,671, or 10.8%) and **Prince George's County** (1,064 or 1.7%).

In percentage terms, the largest gains are expected for **Howard County** (10.8%) in the Baltimore Region, **Garrett County** (8.1%) in Western Maryland Region and **St. Mary's County** (4.8%) in the Southern Maryland Region.

---

Projections (2017-2026) prepared by the Maryland Department of Planning.

**Baltimore City** is projected to have the largest decline in elementary enrollment over the 10-year projection period (-2,404, or -6.1%). However, declines will actually be greatest by 2024 at nearly 2,700 (-6.8%).

**Montgomery County** is expected to have the second largest numeric decline in elementary enrollment by the end of the 10-year projection period (-773, or -1.1%). The cumulative loss is greatest in 2022 at just over 2,000 (-2.8%).

In addition to **Baltimore City** and **Harford County**, the largest percentage declines at the end of the 10-year projection period are expected for **Caroline** (-162, -6.4%) on the Upper Eastern Shore, **Allegany** (-163, -4.2%) in Western Maryland, and **Somerset** (-46, -3.4%) on the Lower Eastern Shore.

**Carroll Frederick** and **Washington counties** are three other jurisdictions which are also expected to see fairly significant declines in the first half of the projection period before growing again later on. For **Carroll**, losses are expected to peak at around 600 (-5.4%) by 2020, but growth after that will leave 2026 totals about 30 below the 2016 levels. Similar to **Carroll County**, **Frederick County** elementary enrollment will have a complete turnaround from being about 860 (-4.7%) below 2016 by 2021, to being 240 (1.3%) above 2016 by 2026. **Washington County** elementary enrollment will decline till 2022 by about 250 (-3.6%) and from then on would increase to 30 (-0.3%) below the 2016 level by 2026.

## Middle School Enrollment

As the tail end of the millennial population cohort transitioned out from their middle school years, middle school enrollment declined in eight out of nine years prior to 2013. The last few years have seen sustained growth, an average annual growth of about 2,600 from 2013 to 2016. Middle school enrollment is expected to continue to grow through 2020 before declines occur in the last six years of the projection period. Even with the declines in the last six years, middle school enrollment is expected to be higher in 11 of the 24 jurisdictions in 2026 compared to 2016 levels with most achieving their peak in 2019 or 2020. (See Tables 9, 10 and 11.)

The largest increases in middle school students occur in the middle part of the 10-year projection period, 11 of the 24 jurisdictions reach their peak in 2020 (See Table 9). The counties with the highest enrollment increase are: **Prince George's County** (2,042, or 7.4%), **Baltimore County** (1,948, or 7.9%), **Howard County** (1,785, or 13.8%), **Montgomery County** (1,273 or 3.6), and **Anne Arundel County** (1,160 or 6.5%). **Prince George's** and **Baltimore counties** are projected to have their highest enrollments in 2020, while **Montgomery** and **Anne Arundel counties** enrollment is expected to peak in 2021 and **Howard County** is going to have its peak enrollment in 2026.

**Carroll County** is expected to have the largest decline (-847, or -14.2%) in middle school enrollment of the twelve jurisdictions anticipated to have losses. Although losses are projected beginning in 2017, the majority of **Carroll County's** decline is expected to occur in years 2022 through 2026.

The other relatively large declines are projected for **Harford County** (-438, or -5.1%) and **Cecil County** (-218, or -6.3%). **Cecil County** gains middle school enrollment in the beginning part of the projection period, declines start from 2021 and continue to the end of the projection period. **Harford County** is expected to add middle school students in the first three years of the projection period (2017-2019) and lose students over the following seven years (2020-2026).

## High School Enrollment

Statewide high school enrollment is projected to move into a high growth period following seven years of decline (2007-2015) and a small gain in 2014 (447, the first since 2006). Growth over the ten-year projection period will leave overall high school enrollment 30,246 (11.8%) above 2016 levels.<sup>16</sup> The 2024 total of 292,240 would represent a new historical peak for high school enrollment in Maryland, exceeding the 2006 peak total of 272,575 by 19,665 (7.2%). Overall, nine jurisdictions in Maryland are expected to experience a peak in high school enrollment in 2024 and another eight in 2023. (See Tables 12, 13 and 14.)

The top five jurisdictions with the largest cumulative gains by the end of the projection period are **Montgomery** (7,440, or 15.7%), **Baltimore** (5,733, or 18.4%), **Anne Arundel** (4,032, or 17.6%), **Howard** (3,966 or 23.6%) and **Prince George's** (2,821 or 7.8%). Three counties—**Anne Arundel**, **Baltimore**, and **Montgomery**—are expected to peak in 2024, while **Prince George's County** is expected to peak in 2023 and **Howard County** in 2026.

In general, high school enrollment is expected to be boosted by 4,118 students (1.4%) by 2026 from the raising of the age of compulsory attendance to age 17 by 2015 and then to age 18 by 2017. The biggest increase in high school enrollment is expected for **Baltimore County** (825, or 2.2%), **Anne Arundel** (664, 2.5%), **Prince George's County** (458, or 1.2%), and **Baltimore City** (218 or 0.9%) over 2026 enrollment totals if the drop out age had been left at age 16.<sup>17</sup>

Five jurisdictions are expected to have a lower high school enrollment totals in 2026 than in 2016: **Carroll** (-1,038, or -12.5%), **Harford** (-197, or -1.7%), **Calvert** (-95, or -1.8%), **Garrett** (-93, or -8.4%) and **Kent** (-3, or -0.5%), **counties**. Overall weak population growth over a number of years is responsible for these anticipated declines.

---

<sup>16</sup> Total high school enrollment is actually expected to peak in 2024 at 292,240 before declining by 6,370 in 2026.

<sup>17</sup> See the Methodology section for an explanation of how the increased age for compulsory attendance was incorporated into the projections.

Source: Actual 2016 from the Maryland Department of Education, "Statistics on Enrollment and Number of Schools Public and Non-Public, 2016." Projections (2017-2026) prepared by the Maryland Department of Planning.

## Methodology

The methodology used in preparing the enrollment projections involves an explicit effort to use the Maryland Department of Planning's latest age-specific population projections (July, 2014) for each political subdivision to guide the selection of key parameters used to develop grade-specific school enrollment projections. Thus, the age-specific population projections provide a starting point for deriving the public school enrollment projections.

### Population Projections

Age-specific population projections for each jurisdiction are used to assist in estimating the following parameters relevant to the school enrollment projections:

- The projected school age population (5-17 years old); and
- Projected live births.

The historical relationship between the school age population (5-17 year olds) and total persons enrolled in school (both public and private) from the 1990 and 2000 censuses and the 2009- 2011 American Community Survey is used in conjunction with the projected school age population to project a range of total school enrollment for each jurisdiction. The historical relationship between total (includes both public and private school enrollments) and public school enrollment is then combined with projected total school enrollment to derive a range of estimates of the projected public school enrollment for each jurisdiction. The range (high, middle and low) of projections of public school enrollment based on projected school age population are subsequently used as a guide in selecting the assumptions for the public school enrollment projections derived by the grade succession ratio methodology.

### Grade Succession Projections

The grade succession ratio methodology requires historical data for each political subdivision on the number of live births and the number of children enrolled in public schools by grade. For the purpose of these projections, historical birth data for the years 1970-2015 and historical school enrollment data for the period 1975-2016 are analyzed.<sup>18</sup>

With the phase in of older age-eligibility requirements for kindergarten beginning with school year 2003 (and first grade for school year 2004), historic birth data by month was used, starting with calendar year 1998, to derive "kindergarten-eligible births" five years hence and "first grade-eligible births" six years hence. Students entering kindergarten in the fall of 2003 must have been age five by November 30, 2003. Age eligibility was raised by one month in the following three years until the 2006 school year, when students entering kindergarten were required to be age five by September 1, 2006 and age six by that date for the first grade. Thus, during the four-year phase in period (school years 2003-2006 for kindergarteners and 2004-2007 for first graders), only 11 months' worth of births were eligible for each school year.<sup>19</sup>

---

<sup>18</sup> Birth data are from the Maryland Department of Health and Mental Hygiene. Since 1991, these data have been derived by geocoding the birth mother's address to the jurisdiction of residence.

<sup>19</sup> For example, for the 2006 school year beginning in the fall of 2006, eligible births for kindergarten enrollment would be for the 11 months from October 2000 through September 1, 2001.

Besides historical data on the ratios of births and associated enrollment in kindergarten and first grade, historical grade succession ratios that reflect projected grade cohort survival for all other grades, from first to second grade and from eleventh to twelfth grade, are analyzed. Specific combinations of historic ratios are then selected that generate grade-specific school enrollment projections that are consistent with the range of school age population based projections of public school enrollment. The resulting grade-specific school enrollment projections combine the effects of:

- Births in a given year which are eligible for subsequent kindergarten and first grade enrollment;
- Mortality for school age children;
- Net migration of school age children;
- Net transfer of children between public and private schools;
- Non-promotion of children to the next grade level; and
- Dropouts in the later years of secondary school.

The grade succession methodology consists of several computational steps. First, the ratio of kindergarten and first grade enrollment for the historical period to enrollment-eligible live births five and six years previously to enrollment are calculated for each jurisdiction. These ratios reflect recent trends in both births and migration for children entering public schools. For example, where a jurisdiction's historical ratio of kindergarten and first grade enrollment to births is significantly less than one, this reflects either net outward migration of potentially eligible enrollees or a high proportion of private school enrollment (or some combination of the two). Where a jurisdiction's ratio is significantly greater than one, this reflects a net inward migration of school age children or a lower proportion of private school enrollment (or some combination of the two).

Based on the projected births and the anticipated future relationship between births and kindergarten as well as first grade enrollment, ratios are developed for the projection period (see tables in the report for each jurisdiction titled, "Ratio Kindergarten and First Grade to Births - Historical and Projected," where the projected ratios are for the 2017-2026 period and projected births are for 2016 to 2021).

By comparing the ratios for the projected years to the historical ratios of enrollment in kindergarten to births five years previously (as well as first grade enrollment to births six years previously), specific projected ratios of enrollment in kindergarten to births (and enrollment in first grade to births) are selected (See Appendix B tables titled "Ratio Kindergarten and First Grade to Births - Historical and Projected"). Additionally, implementation of full-day kindergarten by 2007 was specifically taken into account in selecting kindergarten to birth ratios.<sup>20</sup>

For each jurisdiction, grade succession ratios for other than kindergarten and first grade are calculated by grade from enrollment in the preceding year for the historical years 1975-2016. (See tables in the report titled "Grade Succession Ratios - Historical," which show in the top section of the table the grade succession ratios for each pair of years.)

---

<sup>20</sup> It is also for this reason that first grade enrollment was projected using the ratio to births as opposed to the grade succession ratio of first grade to K.

In the bottom section of these ratio tables are a series of constructed averages of two or more historical single-year ratios (e.g., average for the last two years, average last two years minus most recent year, etc). It should be noted that, for purposes of deriving reasonably unbiased grade succession ratios, the historical enrollment in special education and ungraded classes before school year 2004 are distributed among the graded students in proportion to the number of graded students in the respective elementary and secondary grades. This procedure helps to eliminate variations in the ratios from year to year due to changes in policy and practices with respect to ungraded and special education enrollment. Beginning in 2004, all public school special education and ungraded students are assigned a grade.

Using the projected ratios of kindergarten to births and first grade to births as shown in “Ratio Kindergarten and First Grade to Births - Historical and Projected”, and the alternative grade succession ratios shown in the “Grade Succession Ratios – Historical” for grades two through twelve, alternative school enrollment projections are derived for each jurisdiction using the “grade succession” methodology. The actual grade succession ratios used for the school enrollment projections are noted at the bottom of each jurisdiction’s “Grade Succession Ratios – Historical” page.

The process of selecting the grade succession ratios for each jurisdiction is aided by the comparison of the range of population-based projections of anticipated public school enrollment to the grade succession ratio based projections. The selected “grade succession” projection is the one that appears most reasonable given the projections of school age population and births and the trends in public school share of total (public and private) enrollment.

Beginning with the projections for 2013 to 2022, additional steps in the calculation of grade succession ratios were added to account for the passage of SB362 in the 2012 Maryland legislative session which raised the age for compulsory public school attendance in two stages: age 17 starting in July 1, 2015 and age 18 starting in July 1, 2017. Historical data on the number of dropouts by age by grade by jurisdiction were obtained from the Maryland State Department of Education for enrollment years 2009/2010 to 2014/2015. Due to the declines in the number of reported dropouts statewide, however, only data for the most recent year (2014/2015) of this five-year period was used.

The following are the assumptions and process used to account for the change in the age for compulsory public school attendance:

- The number of 2015/2016 dropouts (by age and grade) that no longer would be eligible to drop out with the new law are put back into the grade from which they dropped out.<sup>21</sup>
- Each year the 2015/2016 dropouts are added to each grade. Each succeeding year, they dropouts are carried forward with the following assumptions:
  - In the succeeding year, if they still are not eligible to drop out, assume 85 percent “succeed” to the next year.
  - If they are now eligible to drop out, assume 50 percent do. Each additional year, each succeeding cohort is reduced by one-half.
  - Cohorts are succeeded to age 19. Afterwards they are eliminated.
- A matrix of total dropouts are added by year out to the latest projection year.

---

<sup>21</sup> It was assumed that 2.5 percent of the dropouts would qualify for the exemptions under the law and would still have dropped out. In other words, 97.5 percent of the dropouts were added back in to the appropriate grades.

Note that the dropouts derived by the method described above are added in after the grade succession results. Thus, the dropouts are not subject at any time to the grade succession ratio process that applies to the rest of the enrollment. Accounting for the increased age of compulsory public school attendance results in an increase in high school enrollment by the last year of the projection period of just under two percent.

The actual process of using the various succession ratios to calculate the projected enrollment by grade for each jurisdiction is relatively straightforward. The ratio of kindergarten to births and first grade to births for the projected period is multiplied by the respective eligible births five and six years previously, respectively, to arrive at projected kindergarten and first-grade enrollment for 2017-2026.

Using the selected values for the succession ratios for grades two through twelve, current enrollees (2016) and projected new enrollment in each year (including first-grade students derived by the ratio with births six years prior) are succeeded from one grade to the next for each year in the projection period.<sup>22</sup> The resulting projections of school enrollment by grade, by year, for the years 2017 through 2026 for each county and Baltimore City appear in the body of this report.

---

<sup>22</sup> The kindergarten (and first grade) enrollment in "Ratio Kindergarten and First Grade to Births - Historical and Projected" include ungraded and special education enrollment prior to school year 2004 based on the distribution of these enrollment figures as shown in the "Grade Succession Ratios - Historical" tables.

## Organization of Detailed Data Tables

This report includes three Appendices containing statistical tables on historical and projected enrollments. Appendices A and B include detailed enrollment tables by grade for the State of Maryland and its 24 jurisdictions (Baltimore City and the counties) respectively. Appendix C summarizes by jurisdiction the historical total, public and private school enrollments from 2006 through 2016 as well as the projected public school enrollments from 2017 -2026.

The figure below lists the detailed data tables and their availability by Appendix.

<b>Detailed Data Table</b>	<b>Appendix A</b>	<b>Appendix B</b>	<b>Appendix C</b>
	<b>State of Maryland</b>	<b>Baltimore City and the Counties</b>	<b>Summary of School Enrollment by Jurisdiction</b>
Total (Public and Private) Historical Enrollments 2006-2016	✓	✓	✓
Public School Historical Enrollments 2006 - 2016	✓	✓	✓
Percent of School Enrollment in Public Schools 2006 - 2016	✓	✓	✓
Public School Enrollment Historical 2016 and Projected 2017 - 2026	✓	✓	✓
Ratio Kindergarten and First Grade to Births - Historical and Projected	✓	✓	
Grade Succession Ratios - Historical		✓	

Several terms on the tables require a brief explanation:

- “Elem Special” - designates those pupils requiring special education due to special needs;
- “Other Ungraded” - designates those pupils assigned to no specific grade in the elementary grades;
- “Sec Special” - designates those pupils in the secondary grades requiring special classes due to special needs; and
- “Other Sec Ungraded” - designates secondary pupils assigned to no specific grade in the secondary grades.

Note: starting with school year 2004, all public school special education students are assigned to a grade. Therefore, there are no public school “special” or “ungraded” students for years after 2003. For private schools, assignment of special or ungraded students to specific grades began in 2009.

Summary enrollment figures for elementary (grades K through 5), middle (grades 6 through 8) and high (grades 9 through 12) schools also appear at the bottom of each of the first four tables along with a summary total of all secondary enrollment (grades 6 through 12).

The listed historical grade succession ratios for grades 9 through 12 do not reflect adjustments made to account for the increase in the age for compulsory public school attendance to age 17 starting in July 1, 2015 and to age 18 starting in July 1, 2017. See the Methodology section for an explanation of how adjustments to grade-succession derived enrollments were adjusted.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.

t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.

Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

1979	1,117	1984	1,033	0.9246	1985	1,282	1.1480		Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.  t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.  Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

1979	414	1984	432	1.0444	1985	434	1.0485		Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.  t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.  Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

1976	1,984	1981	1,826	0.9203	1982	1,909	0.9621		
1977	1,955	1982	1,874	0.9587	1983	2,021	1.0337		
1978	1,938	1983	1,823	0.9406	1984	2,033	1.0490		
1979	2,036	1984	1,944	0.9547	1985	2,197	1.0790		Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.  t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.  Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

1978	1,528	1983	1,495	0.9785	1984	1,741	1.1395		
1979	1,549	1984	1,564	1.0099	1985	1,810	1.1687		Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.  t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.  Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

1979	265	1984	250	0.9450	1985	274	1.0333		Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.  t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.  Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.

1979	425	1984	399	0.9386	1985	410	0.9655		Historical birth data is from The Maryland Department of Health and Mental Hygiene. Data is derived by geocoding the birth mother's address to the jurisdiction of residence.  t=Transition Births. 1970-1997 are calendar year births. 1998 and after are "kindergarten eligible" births (the sum of parts of two consecutive years). With the transition of older kindergarten age requirements through 2006, only 11 months of births are kindergarten eligible for birth years 1998-2001 corresponding to kindergarten years 2003-2006.  Beginning with school year 2007, 12 months of births are eligible for kindergarten (September to December 2001 and January to August 2002). All subsequent school years have a September to the following August time frame for kindergarten eligibility.
