In fine, this is a frightful hideous Monster, and is worth your serious Consideration: but beware how you approach too near her, for not only her Breach is pestiferous and infectious, but should you fall in her Clutch, there is no getting out again.—I would, out of meer Love, advise the Fair Sex, tho' I know their Curiosity is strong and pressing, especially such as have Husbands, and may be pregnant, to keep out of her Way; lest, by this Means, a great many doleful Accidents should happen, from sudden Frights and Surprizes; but also, which is worse, through the strength of Imagination, there may arise a hideous Race of Monsters, which may banish, in Time, from the Face of the Earth, even... and human Sentiment.—I believe this... has never been much, if at all, seen in the Company of the Fair. On Wednesday died, in the most violent Agonies of Death, at his Lodgings near the New Exchange, Mr. Philip Newry, a Gentleman of Fortune. His Death was occasion'd by being over surpriz'd at seeing the Rebel Lorus beheaded on Tower-hill; when he was carried Home, and continued in a mad disorder to his Death.

We have an Account from Lancaster, that one John Myer-cough of Yearland, has for three Months past voided a great Number of Insects much like Caterpillars, only they have hard red Heads; and through a Magnifying Glass appear hairy all over, even to the Mouth, which seems fork'd; they are of a dark brown colour, with a greenish cast upon the Body, and legg'd like Caterpillars. The Man had a great Pain always upon one Side of his Stomach, and still vomited after his first Sleep in the Night; but though he could see them Worms in the Morning upon the Room Floor, yet he could not believe he vomited them, till vomiting lately in the Day-time he was deceiv'd for he saw them come up alive; upon which he apply'd to Dr. Bracken of Lancaster, and on his taking some

proper Medicines, he voided by stool a great many dead Insects like those above mention'd, and is now free from his former Pain. As this is an uncommon Case, there being only three Sorts of Worms met with in human Bodies, viz the round Worm, and two both Flat; the broad Worm, divided all its length with cross-Knots, and sometimes nine or ten Feet long; and thirdly, the small Worms call'd Alcarides, which mostly affect the Rectum: we hear the Doctor designs to send the Insects when this Man ventur'd to one of the Royal Society, with a full Relation of the Particulars.
