The readers of this paper will be pleased to learn that there is at last one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials. Address

will require precisely the same simple, yet becoming—and, if there are occasional evening receptions at school, she should have for them a white frock made high and trimmed with ribbon and embroidery. Her changes of underclothing, stockings, handkerchiefs, and the little accessories which every girl prizes, should be the same as at home, except that she will need one-third more of everything, as, in absence, a wardrobe cannot be easily replenished. Every article must be plainly marked. A thick jacket, stout boots, golf cap and rain cloak are necessities. Hats should be very simple, and two are enough—a toque or felt hat for every day and a dainty little hat for Sunday, though the latter may be done without. Even in very cold weather, college girls flit bereft from class to class and are none the worse.—Collier's Weekly.

The Use of Perfumes.

Few people know how to use perfumes, although everybody thinks it is a very simple matter. The delicate extracts favored by the majority should never be used by tipping up the bottle and soaking a small part of a garment. It must be sprayed through a very fine atomizer, and even then used sparingly.

Sachets are everywhere among the belongings of a luxurious woman, and have developed from the original small scented bag to generous proportions. In Paris it is an ordinary thing for closet walls to be lined with cheese-cloth or silk pads scented with powder, which must be renewed every two or three months. Shelves are covered with sachet pads of the same sort. Bureau drawers are lined with them. Scented sachet cotton is used by tailors and dressmakers for the padding of gowns.

Perfumed flannel or chamamois skin soaked in perfume until it resembles the old Cordova leather, or peau d'Espagne, is cut into strips and sewed inside gowns, hats and other articles of wearing apparel. Air-tight boxes or movable closets are made, in which gowns may be hung while perfumed oils are burned under them, filling every thread of the goods with fragrance. Even beds are perfumed, sachet pads being put between the mattresses and the sheets. Lavender and orris are more used for these pads than the heavier perfumes.

Small perfumed tablets, the size of a nickel and a quarter of an inch thick, are made to be tucked into a glove while it is on the hand, or into purses, card cases and pockets. Perfumed boxes, escritoire pads and perfumed sealing wax are used to scent note-paper. Small cones, made of charcoal and perfumed oil, about the size of a finger end, are burned for perfuming a room. Incense burners of all sorts, consuming perfumed oils, may give to a woman's boudoir or salon the fragrance she affects.

Pastilles dropped into the bath perfume the water, and soaps, toilet water, cold creams, almond meal, lotions, powders and rouges must all have the same fragrance. Perfumed hair washes are made for shampooing purposes. Perfumed toilet vinegar is used for a tooth wash. Lip salve, eye-brow pencils, even the blue powder and brush for painting veins, may be had in almost any perfume.—Chicago Chronicle.

bands being inserted diagonally i the iron.

A chie arrangement for the neck is made of gold fibrous dotted with black chenille. It passes twice around the neck, through a gold slide, and is finished with a gold fringe.

A chon with two ribbon ends made of black velvet and gauze is a smart addition to the front of a bodice. In fact, a note of gold seems essential. Gold gauze will be used extensively for evening frocks this autumn.

Shepherd's checked taffetas, in handsome color bendings suitable for the season, have been revived for the making of shirt waists to wear beneath short open jackets of plain or fancy wool autumn suitings and for linings, vests, yokes and separate waists.

Hats to be worn with youthful costumes of tuxed and cheviot this fall are Lady Smith models of rough felt—Sangler felt they are called. Upon them quills and stiff feathers are secured with knots of brilliant gladiolus-red or equally brilliant nasturtium-yellow velvet.

One of the most sensible trides invented in years is the clasp for keeping short hairs in place, when the coiffure is high. They are made not only of shell—real and imitation—but also of gold and silver. All are of the utmost possible lightness, that they may not drag the hair down.

Handsome qualities of lightweight Venetian cloth, in blues, pinks and rich fruit colors, including red, will be much used for the first wool costumes of autumn. They are extremely plain in effect, except the red suits, which are trimmed with boucés edged with narrow folds of velvet of a deeper shade.

TAMING A WILD HORSE.

Description of a Thrilling Incident of the Plains.

The main reason why Hamlin Garland's accounts of the plain and prairie life of men and things in the Far West are accepted as authentic is that he has been through it all. In "The Eagle's Nest," in the Saturday Evening Post, he gives the following account of how a horse was subdued:

"Mose refused to allow his shining, proud-necked stallion to be roped and thrown, and asked the boys to help drive him into a strong corral, together with five or six other horses. This was done, and stripping himself as for a race, Mose entered the corral and began walking rapidly round and round, following the excited animals. Hour after hour he kept this steady, circling walk, till the other horses were weary, till Kintuck ceased to snort, till the blaze of excitement passed out of his eyes, till he walked with a wondering backward glance, as if to ask: 'Two-legged creature, why do you so persistently follow me?'"

"The cowboys jeered at first, but after a time they began to marvel at the dogged walk of the youth. They gathered about the walls of the corral and laid bets on the outcome. At the end of the third hour Kintuck walked with a mechanical air, and the fire and fury gone out of him. He began to allow his pursuer to approach him closely, almost near enough to be touched. At the end of the fourth hour he allowed Mose to lay his hand on his nose, and Mose petted him and went to dinner. Odds stood in Mose's favor as he returned to the corral. He was covered with dust. At last, when all the other horses had been turned loose, Kintuck, trembling and with a curious stare in his eyes, again allowed Mose to lay his hand on his nose. He shrank away, but did not wince. It was sunset and the horse was not merely bewildered; he was physically tired. The touch of his master's hand over his eyes seemed to subjugate him, to take away his will. When Mose turned to walk away the horse followed him, and when drawn by some magnetism of the herders looked at a certain point in the sunset. Thereafter he followed to the stable."

enough may convince himself of the absence or presence even of the slightest traces of circulation:

If we ligate tight a member of the body, best for example, a finger between the first and second joint, in the living we will soon notice beginning almost at once, a reddish coloration of the portion above the ligation. It becomes darker and darker red and finally assumes a dark blueish red color. The entire upper portion will be thus effected and only directly around the ligation there will be a small, colorless, white ring. Now, as sure as this discoloration will be observed in the living being, as sure will all traces of it be absent in the dead. The bluish discoloration occasionally observed of and around the finger nails in some corpses is of no influence upon nor does it interfere in the slightest with the phenomenon and its correct interpretation.

The phenomenon, of course, is easily enough explained in the living by the stagnation of the blood in the veins and the capillaries when a new supply through the arteries and the back flow through the veins is cut off by the ligation. The white ring around the latter is produced by the partial arterial, partial venous anæmia.

In place of a finger, if, as it at times may happen, the skin seems too thick and horny to show the phenomenon plainly—though this will but seldom occur—one may use the toes, the ear-laps, even the tip of the nose. If desired. The member must be only thin enough in order to make the ligation as tight and perfect as possible.

I have used this means in about 1000 to 1040 cases previous to post mortem examinations.

In one case only I observed the mentioned discoloration, though it was impossible to notice any heart action by any means. I at once resorted to venesection, and, sure enough, the blood flowed and after a short time faint heartbeats up to seven per minute could be distinguished. Everything was done to start respiration. Yet it was too late and the heartbeats within half an hour gradually diminished. The corpse had been laying for dead for over two hours.

The Heaviest Brain.

In a German psychological journal, Professor Van Walsem gives a short description of the heaviest brain on record. The possessor of this ponderous organ was an epileptic idiot, who died at the age of twenty-one. He began to walk at four years of age, never attended school, and was received in the institution at Meerenberg at his fourteenth year. He was an idiot of low intelligence and of changeable but good-humored disposition. The senses seemed good and the muscular system well developed. He suffered from epilepsy, during an attack of which he died. The brain weighed 2850 grains and seemed to be a general enlargement. The cerebellum was regular in form. The spinal cord seemed slightly larger than usual and the spinal nerves bigger. On microscopic examination the ganglion cells of the brain seemed rare, the layers indistinct, the pyramidal layer scanty, the nerve-fibres everywhere distinct. Neither the cerebral vessels nor the neuroglia were altered.

Where Ants Are a Pest.

In South America latives sometimes suffer from swarms of ants, which seems to be suddenly seized with the migrating instinct and move on in an unbroken line. If the sun is very fierce and they have to cross an open place they build covered bridges, some, which have been tested with smoke, being hundreds of feet in extent. The ants enter houses, devouring everything, even rats, mice and snakes.

Lively Flowers.

Beth was greatly surprised on seeing a dozen or more butterflies about a pile of water in the country road. "I saw the queen at night," she said, "and she came out so gradually, on the wings in the day."

Decorating a Room With Flowers.

In decorating a room with flowers it should be remembered that profusion in the use of flowers, as of anything else, is in abominable taste. Those fashionable dames who turn their drawing rooms into artificial flower arbors every time they entertain are among the worst offenders against good form.

The color of the flowers should be subordinate to the color scheme of the apartment. In a red room not of the scarlet type red and yellow flowers like gladioli, scarlet and yellow dahlias and asters, yellow and red chrysanthemums and peonies and yellow lilies may be used to advantage. In a blue room pale yellow, white and buff flowers look well, especially such as have a yellowish green foliage. Warm tints should be used for forming harmonies and cold tints for contrasts.

When artificial light is to be used at the time the best effect of the flowers is desired, it should be remembered that white, red and yellows are the safest to use. Blue, violet and the reddish purples fade under its rays.

HOUSEHOLD RECIPES.

Peach Shortcake—For this, take one quart of flour, one teaspoonful of salt, two teaspoonfuls of baking powder, into which rub one-half cupful of butter. Wet with a generous cupful of ice water, and roll out about an inch thick and bake into separate pieces. When done, butter generously, and put together as strawberry shortcake, using sliced and sugared peaches. Place in the oven a moment to soften the peaches, and serve with whipped cream.

Eggs with Mushrooms—Take one tablespoonful of butter, a saltspoonful of salt and half a saltspoonful of pepper; place in a saucepan, mix a tablespoonful of flour with the hot butter and add half a cup of the favorite table sauce. Let the mixture come to a boil and pour on a hot platter; have ready cooked a quarter of a pound of fresh mushrooms and pile in the centre of the sauce; poach as many eggs as required, and place on the sauce around the mushrooms. Serve very hot.

Spanish Tomatoes—To half a cup of brown gravy add a cupful of strained tomato juice (the canned answers nicely) and a tablespoonful of cooked tapoca; cook five minutes, then add five tomatoes and simmer until hot through. While these are heating mix together half a cup of finely chopped cold chicken, lamb or veal, the same amount of mashed potatoes, two-thirds of a cup of soft crumbs, a beaten egg, dash of pepper and saltspoonful of salt; form into small balls, poach three minutes in boiling salted water, drain and add to the tomatoes.

Lord Russell Whistled. The departure of the youngest son of the late Lord Russell for South Africa early in the year as a lieutenant in the Royal Artillery was marked by one of those manifestations of family affection which arouse universal sympathy. As the great troopship swung slowly from her moorings the Lord Chief Justice, standing on the quay, failed to descey his son among the crowd that lined the bulwarks. At last he gave a shrill whistle, using his fingers in a manner well known to school-boys, and the evidently familiar call quickly brought young Russell to the side of the ship to wave farewell. The incident evoked a hearty cheer from all who witnessed it.

A Deadly Sea Flower. An exquisite sea flower, like an aster, grows in the ocean, but is a deadly poison that has killed, and...

children also.

When the young girl's thoughts she experiences headaches, dizziness, an abnormal disposition to sleep, painful limbs, eyes dim, desire for solitude, society of other girls, when she is a my friend, then the mother should go to her aid such a time the greatest aid to nature is Lydia E. Pinkham's Vegetable Compound. It prepares the system for the coming change, and is the surest remedy this hour of trial.

The following letters from Miss Good are proof of Mrs. Pinkham's efficient advice to young women.

Miss Good asks Mrs. Pinkham for Help. "DEAR MRS. PINKHAM:—I have been very much troubled time with my monthly periods being irregular. I will tell you it, and put myself in your care, for I have heard so much month menstruation would become less and less, until for six months, and now it has stopped again. I have a very pale and of a very bad color. I am a young woman, and I would tell you you would tell me if you could help me. Cor. 29th Avenue and Yeslar Way, Seattle, Wash."

MISS PEARL GOOD

"DEAR MRS. PINKHAM:—I have been very much troubled time with my monthly periods being irregular. I will tell you it, and put myself in your care, for I have heard so much month menstruation would become less and less, until for six months, and now it has stopped again. I have a very pale and of a very bad color. I am a young woman, and I would tell you you would tell me if you could help me. Cor. 29th Avenue and Yeslar Way, Seattle, Wash."

\$5000 REWARD Owing to the fact that some skeptical people have from time to time questioned the genuineness of the testimonial letters we are constantly publishing, we have deposited with the National City Bank, of Lynn, Mass., \$5,000, which will be paid to any person who can show that the above testimonial is not genuine, or was published before obtaining the writer's special permission.—LYDIA E. PINKHAM MEDICINE CO.
