When a problem be listens, repeats it falls to muttering ra and presently says,

While he is s and even carry destribute and even carry on during the process—
while he is multiply delight figures by eight choosing the number of seconds in a given term of years, months, days, and hours! In the months, days, and hours! In the same way he kill add in a few sec-onds seven numbers of eight or ten figures each, of extract the sixth or seventh root.

M. Binet, the writer of the Revue article, believes that the case furnishes strong confirmation of the theory of "partial memories"—memories, that is, for particular classes of objects. Inaudi will repeat after you twenty-five figures, while an ordinary man could not repeat more than from seven to ten. If letters are given to Inaudi, however, he can

ot repeat more than seven or eight.
It is believed further that his case a thing as an "auditive" as well as a a thing as an "auditive" as well as a "visualizing" memory. Most mathematical prodigies have professed to see, mentally, the figures with which they had to do, while Inaudi invariably declares that he does not see, but hears them. This goes with his habit of whispering or muttering to himself during the operations, and it has been noticed that if he tries not to whisper he is more longer in

At some time since he was 13 years old Inaudi has learned to read and write, but even now, we are told, his education in many respects is only rudimentary.

The Pinest Raliway Station. It will surprise most people to learn that the finest rallway station in the world is in India, in Bombay, which cost \$1,500,000, and took ten years to build. The finest in Europe will be, when completed, the new central station at Frankfort-on-theto be erected by the North British Company at its Edinburg terminus.

GOODNESS! Here is the Homeopathic Society suggesting a law for the prevention of unwise matri-monial unions! Such a law might be good for the constitutions of the human race, but would it be consti-

the earth is cool is is ready to use. Cut of all water-scaked roots, and then present the earth firmly around the plants, using always the common red earthen pots with separate saucers for each pot.

Keep repotted plants in a shade when the firmly around the plants, as a promoter of flesh and health in calves, but sour whey is not worth anything. This is a pointer that may be followed to advantage. ing my pulpit for a number of Sab-baths. After trying a physician, without obtaining relief I saw the advertisement of your remedy and obtained a bottle. I received quick and permanent help. I never hesitate to tell my experience. Rev. W. H. Haggerty, Martinsville, N. J. @

Why do not farmers wh nounts of apples that do rawing long distances to

apple butter? It is abor, as it is a bra apple butter? It requires considerable labor, as it is a branch of manufacture; but the farmer who has inverted labor in this way is surer to get pay for it than he is for most of his work on the farm. As far as possible the farmer should put the product of his farm in the form where it will bring him most money, and if he threby turns his farm at some seasons into a factory he may be none the less prosperous.—New York Herald.

AN FLECTRIC INCURATOR.

by semistropical flowers.

Plants not cally need a coolerature in the might, but also darkness it is neglect of this fact that is one the cause of the lanky growth of house plants. Shield plants with newspapers in the evening if the gas in the room is lighted. The paper will keep both heat and light from the plants.

Another cause of spindilog growth is lack of air. Plants shut up in the house get secastive, and are liable to suffer if there is a sudden fail in temperature, but if they are given plenty of fresh air

An overly in the hatching of eggs has appeared in the shape of an electric incubator. The special feature of this machile is that the heat of the egg drawer is automatically regulated to the fiftieth part of a degree Fahrenheit. It consists of a tank incubator, heated by radiation from the bottom of a water tank, which is constructed on the multi-tubular system. When the egg drawer is a sudden fall in temperature, but if they are given plenty of fresh air daily, unless the day is very noisement, the plants will thrive and be attudy.

Do not open a window directly on plants in windows should be turned once or twice a week. A fine form, which is half the beauty of a plant, cannot be attained. tubular system. When the egg drawer reaches the temperature of 101 degrees Fabrenheit an electric thermo tat con-

Feed to a considerable extent determines the quality and quantity of the milk and butter. It does not pay to keep a cow on half rations and hardly get a good milking at any time during the winter. In most cases both the milk and butter are of more value during the winter than at any other time, and and butter are of more value during the winter than at any other time, and generally enough more to make it worth while to give the cows good treatment during the winter. They must be fed enough to live, at least, and they ought to have enough to keep them thrifty, as there is no advantage in letting them run down during the winter and then be obliged to take the best part of the spring to make up what has been lost. A little additional freel will not only keep them thrifty, but in many cases in-

keep them thrifty, but in many cases in-sure a good flow of milk, and this implies a profit rather than a loss, as is so often the case when the cows are fed on the plan of barely keeping them alive through the winter, -St. Louis Repub.

THE CISTERN RESOURCE.

"How much will your cistern hold?" I saked a friend, relates Hollister Sage. "Oh, half a dozen hogsheads or more. It cost me \$20." Twenty dollars for an unfailing supply of water which is never contaminated by soil-leachings! Cheap enough if the cistern be well made and lasts for twenty years, a reasonable time frequently exceeded. How many farms are considered almost worthless because poorly watered, and if one or more done by any farmer—drouths would be done by any larmer—drouths would be tided over and no trouble made. I have now in mind a place where the only source of supply is a well which fails on the first provocation. It is offered low. Another place near it, and also poorly watered, has a spacious cistera under a harm keep following the provided by the state of the stat bars, kept full by its roof, and although the farmhouse has been burded, the place is still held at over \$100 per lane leads from the pasture to the farmyard, where a trough is kept full constantly by use St a pump. The thirsty herd comes up for food and shelter. In the West, even in many cities, castern water gives the sole sup-ply. The cleanly house-owner pumps dry his supply reservoir and has it cleaned thoroughly before the autumn or April rains begin. As soon as this is done the cistern is allowed to fill, clean ightly and kept so for the year. Fresh, copious water of spring lasts notil the earth is sprinkled, the fall dust laid and all the leaves blown away, when, if the

PLANTS FOR WINTER.

The fall is the time for preparations plants that are chosen to bright the home with leafage and bloom during the winter. The first point to be considered is the choice of the plants. Young breathing plants are always to be preferred rather than those that are exhausted with blossoming during the life the fowls get too fat give them summer. It seems almost hearfless to some grain not rich in carbe-hydrates. blossoming has weakened them, but their rapid growth under summer suns has rendered them less hardy. Feeble plants about preserve the skep into the growth under summer suns has rendered them less hardy. Feeble out into the grass until the daw is off, plants should never be taken into the even though the sun is bright. window garden unless it be to save some

favorite species.

Examine the earth carefully and see that it is free from insects and grubs. It is a good plan to put panfuls of loamy garden earth and leaf moid mixed into the oven, and bake it haif an hour.

This will kill all insects, and when the earth is cool is is ready to use. Cut of all water-acaded roots and then were the coolers as a promoter of flesh and health in calves, but sour whey is not

settled in their new homes. Do not let streets, Portland, Mes, has been purthese plants bloom for a month or two, chased by John Musgrave of that city,

once or twice a week. A fine form, which is half the beauty of a plant, cannot be attained without this. Plants should also be shielded from the dust which arises in aweeping and dusting

nects a dry battery with an electro-magnet which actuates a damper, allowing the heat to escape through the open air instead of passing through the flues of the water tank. This entirely automatic device is said to effect a saving of thirty per cent. In the fuel used for heating.—Boston Transcript.

COWS IN WINTER.

Feed to a considerable extent determines the quality and quantity of the milk and butter. It does not pay to keep a cow on half rations and hardly get a good milking at any time during the winter. In most cases both the milk gently with a sponge on both sides. gently with a sponge on both sides.—

> FARM AND GARDEN NOTES. Heas that are crowded will not lay. Hens will not lay whee shivering with

Do not change all the old heas for roung pullets. Dispose of say old hens you do not wish to winter.

The size of the sheep should be gaged to suit the pastures. Cornmeal and bras with milk is a

good feed for ducks. The manure from the pig is valuable in proportion to the food consumed.

Use nothing but pure brod males, no natter how your flocks may be made up, Fruits and flowers bave been rightly called "children of the light woven from sunny air."

Bear in mind that the sooner the hear pass the moulting season the cooner they begin laying.

Do not risk too many flocks together Small flooks carefully tended will give the best results.

You cannot afford to buy all your ome supplies, no matter how big crops you grow to sell. No one can afford to buy manure un-til he has first made use of every pound

produced at home. A small herd of cattle well fed will

pay better than a large one that just "pulls through." Young hens and the early pullets will bring more money now than as "old

roosters" next spring. During the winter it is quite an item to strange so that the fowls can have as

much sunlight as possible. What is a good sheep? It all depends on what the sheep is wanted for and the

man who takes care of it. Stick to the breed that you have done well with. Improve and build it up vather than let it fall back.

When a shespman finds occasion for grumbling it would be well to quit the business and try something else.

Give the young pigs pleaty of succe lent food. A slop made of bran an potatoes makes an excellent food.

supply be short, the great distillery of the heavens is again sillowed to pour in a sufficiency.—New York Tribune.

No mercy should be shown to the dog that rushes out and barks at a passing team. He should be shot at sight. If you have no extra feed do not buy lot of stock this fall because it is

rap. It will be dear (to you) before Do not walt till you are obliged to give full winter feed before you begin

The Wisconsin experiment station says that 100 pounds of sweet whey is worth beven cents as a promoter of flesh and the catch is caives, but sour whey is not worth anything. This is a pointer that may be followed to advantage.

Sausstroom Sauce for Fowis — Peet a can of canned mushrooms or use a can of canned mushrooms; put them into a saucepan with a little sait and pepper, u very little mace, a pint of rich, aweet cream and a gill of butter rubbed up with a teaspoonful of flour; boil up once and serve in a gravy boat.

but plach off all buds, that the strength of the plant may be concentrated in the roots, in order to produce a new, vigorous growth of branches.

In choosing the windows for plants is place.

Certainly the he in the house should had often this is not the case ev urious houses, a springless cot bra-thought good enough for the girl's room. Though in a city home, the room of the maid-of-all-work is a small ball bedroom on the top floor. This may still be heat, even fine in its appointments, with dainty spreads, con vanient toilet articles and a whole look ing-glass. There should be a bureau of some description, with a draw reserved for her towels and ben linen, so that she need not call on the mistress for thes things common enough in the rest very good way to appreciate a girl's weariness by those who seem never to dream that she can get tire!, is to fry dream that she can get tired, is to try some day to take her place. After getting thoroughly tired out with half the work undone, the mistress begins to understand what day after day of domestic toil means. When on Tuesday an ambitious girl is burrying to complete a large ironing in one day, it is hardly fair to call on her repeate life to do something else, as often happens when there is univ one servant.—Detroit when there is only one servant. - Detroit

CHEMISTRY OF THE BAKED POTATO. Use "s the first vegetable prescribed by the physician for the sick person was is beginning to use solids is a baked potato. A baked potato, however, my be no better than a boiled unless it by done in so high a temperature that the starch is affected. Boiled potatoes starch is affected. Boiled potatoes cannot be subjected to a higher temperature than 212 degrees Fabresheit. Baked potatoes may be done in such a way that they are little better than boiled—for instance, done in a stoy oven. On the other hand, if they are put into a temperature of 380 or 490 degrees Fabresheit, or what is calle in "hot oven" they will be done in such a manner that the conversion of starch will in a degree take place and the potato be consequently political and faulty digested. Potatoes roasted in hot subers are delicious and for the same reabers are delicious and for the same reason. The high degree of heat cook
