

Cures Eczema, Itching Humors, Cuts Nothing to Try. E. B. (Bleeding Blood) Balm is now recognized as a certain cure for Eczema, Itching Humors, Scabs, Sores, Water Blisters, Pimples, Aching Joints, Rheumatism, Old Sores, Prickling Itch in the Skin, Old Eczema, Sores, Ulcers, Itching Blood, Itch internally cures the worst and most deep-seated cases by purifying, cooling and soothing the blood, and making it healthy and free from all impurities. It is a sure cure for all skin diseases, and gives the rich glow of health to the skin. It is a sure cure for all skin diseases, and gives the rich glow of health to the skin. It is a sure cure for all skin diseases, and gives the rich glow of health to the skin.

There are several large factories in the United States devoted to the manufacture of rose water.

Crab Orchard Water is not a "cure-all," but for all diseases of the liver, stomach or bowels it supplies a place not filled by any other medicine. It is a safe and reliable remedy.

The shoe dealer is always on the lookout for slippers customers. Mrs. Winslow's Soothing Syrup for children teething, softens the gums, reduces inflammation, allays pain, cures colic, etc. 25c a bottle.

It generally makes the man with well-shaped legs who goes in for golf. I am sure Piro's Cure for Consumption saved my life three years ago. Mrs. Thomas Brown, Maple St., Norwich, N.Y., Feb. 17, 1900.

The newly-seeded area of winter wheat is estimated at 30,252,541 acres.

Happiness cannot be bought, but for all diseases of the liver, stomach or bowels it supplies a place not filled by any other medicine. It is a safe and reliable remedy.

"You make me tired," remarked the wheelwright. We refund 10c for every package of Piro's Cures that does not reduce inflammation. Monroe Drug Co., Unionville, Mo.

It is computed that at the second inauguration of President McKinley \$4,000,000 was spent.

No woman really enjoys wealth unless she feels that she is inspiring envy.

NEWS NOTES WOMEN

A Feminine Doctor of Law. Miss Eleanor A. Ormerod, of London, who has recently had conferred upon her the degree of Doctor of Laws by the University of Edinburgh, ranks very high as an autologist and has one of the finest collections of grains and insects to be found in Europe.

Princess Shiraz Coming In. One of the season's novelties will be the princess skirt which is being brought out by the leading shops and dressmakers.

Woman Suffrage in Kansas at present extends only to municipal elections. It is estimated that in England one woman in every six earns her own living.

Princess Frederick Leopold, sister of the German Emperor, is an almost tireless skater. In France a woman may appear in masculine attire if she pays a license fee of \$10 a year.

Thirty thousand women spend their lives in driving and steering the boats in southern and midland England.

Mrs. Barely Alford, Marquess of Lottville, in Cornwall, has seen five British sovereigns, having been first presented to Queen Adelaide.

The shape of the eyebrows, it is said, can be greatly improved where necessary by brushing and pressing them into the proper curve every day.

In the catalogue of the University of Strassburg, twenty-six of the 337 lecture courses are marked with a star to indicate that they are not open to women.

A famous physician used to tell his women patients to surround themselves with odorous plants, such as verbena, lemon geranium, mint, lavender, sage, thyme, and violets. These would insure health and increase beauty, he asserted.

The Prussian Minister for Railways has expressed his great surprise at the restricted employment of women in the railway service, especially as looking clerks, for the sale of tickets, etc., and has ordered that they are to be engaged more extensively.

Favored ones who have seen pictures painted by the Empress Frederick recognize in this royal woman a very great artist. Recently two of her pictures were shown at the Salon, the bazaar, and one room at Windsor Castle is entirely hung with water colors from her brush.

Wide crepe de chine ties are stylish, but those of satin are very narrow to wear with linen collars.

Many of the new spring suits are made with double skirts, but this fashion is very trying to any but a slim and graceful figure.

Many of the new gowns show the tablier front, and they are very effective made of silk muslin, shirred in many rows down from the waist and ruffled across the bottom.

A pretty hat is of turquoise velvet made entirely of tiny ruffles. The brim is sprayed from the face in front, with a ruff of green silk leaves on the edge and a black rose on top.

A very chic little black hat is of tulle over silver gauze. The shape is a modified Spanish turban, and the only trimming is a big soft black silk rose with some green leaves laid along the brim.

Batiste and silk muslin dresses, the pure white trimmed with yellow lace, are among the novelties. They are all moderately close around the hips, and flare at the foot, where they are countless ruffles and flounces to make them stand out.

Mercedized satens, which very closely resemble satin foulard, and soft silk and linen mixtures in various colors, striped, dotted, and plain of surface, are among the favored materials for shirt waists for morning wear this spring.

There is a tendency to close shirt-waists on the side. A series of tiny straps buckled serve nicely for this purpose. Sometimes the pleat is attached to a bodice to button over on one side. When the garment closes on one side the collar band also fastens in the same manner.

HYDROGEN FROM MARS. What the Earth Exchanges With Her Sister Planets.

An important paper by the joint work of Professor Dewar, of the Royal Institution, and Professor Living, of the University of Edinburgh, was read yesterday before the Royal Society.

It dealt with the spectrum of the more volatile gases of atmospheric air which are not condensed at the temperature of liquid hydrogen. The air, filled with gas which had passed through the U tube showed on sparking a spectrum of nitrogen, of argon or of carbon, but showed the spectra of hydrogen, helium and neon brightly, as well as a great many less brilliant rays of unknown origin.

In addition, they showed at first the bright rays of mercury, derived, no doubt, from the mercury pump by which the air had been exhausted before the admission of the gases from the liquefied air.

In one experiment the mixture of gases in a vessel into which a fraction of the liquefied air was distilled by the pump, and without being fractionated through the U tube in liquid hydrogen, and the mixture was found to contain forty-three per cent of hydrogen, six per cent of oxygen and fifty-one per cent of other gases, and it was explosive when mixed with more oxygen.

This, according to the learned professor, shows conclusively that hydrogen in sensible proportions exists in the earth's atmosphere. They conjecture that there must be a continued accession of hydrogen to the atmosphere from inter-planetary space, and they cannot resist the conclusion that a similar transfer of gases must also take place.

Other exhaustive examinations led them to believe that they might find the substance which is believed to be helium in the really present in the earth's atmosphere, and they believe shortly to be able to verify their conclusion.

Their Epitaph. Two little tramp kittens were brought home in a basket. One was called Myrtle, and the other one Ann. Myrtle died, and they buried her in a flower-bed under the foot of a rose bush. When they were digging up a piece of pine board there.

Here Myrtle lies. To fertilize. From Ann Eliza passed away, and the same day she was buried.

Ann Eliza. Myrtle fertilized. Myrtle fertilized.

RECLAIMING THE SWAMP OPERATIONS ON A CIGANET SCALE IN THE SOUTH.

By a System of Canals a Million Acres of Fertile Land in the Atchafalaya Section of Louisiana are being reclaimed. The Atchafalaya Problem.

The opening of a tract of land thirty miles square in Louisiana, which will occur some time during the coming summer, will be attended by the last great struggle for free homes in America.

For while the Government still offers many millions of acres of lands available for settlement under the homestead act, practically all the remaining public domain must be subjected to irrigation or drainage before it will yield a profitable return to the cultivators.

This final exhaustion of the lands to be had for the asking, and for which a man need not put forth a claim in order to assure himself of the land, will be the final exhaustion of the lands to be had for the asking, and for which a man need not put forth a claim in order to assure himself of the land.

It is estimated that in England one woman in every six earns her own living.

MICE QUICK TO LEARN. So Says a Man Who Finds Them Inter-lopers on Forest Avenue.

Out on Forest Avenue is a mouse fancier whose residence, lest he lose caste with his neighbors, is withheld. In a pen he has half a dozen or so ordinary field mice.

"They are the most sociable pets I ever had," he remarked, "and any one of them will rise to attention as he hears you step on the floor. I have had these young ones about six months. They don't live long when cooped up, and they will come freely to my hand to eat or drink. Some of them are so tame that they will climb to my shoulder and display not the slightest alarm at being touched. They haven't acquired so much faith in all humanity, however, and have refused to trust any one else so far.

"While mice eat a great deal for an animal so small when food is abundant they can exist for a surprising long time without eating or drinking. Any one whose house has been infested with mice and who had passed weary weeks with everything that possibly could serve as food was carefully under lock and key, finally calling to service an active ferret, will appreciate this fact. It is a mighty aggressive and tireless hunter by foot, and is able to climb at walls or similar obstructions through which a rat usually gnaws a path. As a test of persistence in this line I hung a basket of food from the ceiling by means of a string, and I saw a mouse at a hole in the ceiling about eight feet or more on a slender cord and he descended and ate his food, later climbing up again.

"All of my mice I have taken from nests about the premises, and notice that they invariably seek shelter below my feet when I am about the house. They are so tame that they will come to my hand to eat or drink. Some of them are so tame that they will climb to my shoulder and display not the slightest alarm at being touched. They haven't acquired so much faith in all humanity, however, and have refused to trust any one else so far.
