

To Lord Baltimore, Annapolis. the 12th Nov. 1761.

My Lord

At the same time that I transmit a Triplicate of a Letter which I had the honour to address to Your Sdp. the 22 of last Month, when the Comm^{rs} were at Newcastle, I inclose Your Sdp. a Draft or Sketch which will serve to shew what hath been already done, in pursuance of the Commissions that Your Sdp. & the Proprietors of Pennsylvania were last Year pleased to send to Governor Hamilton & myself together with the Articles of Agreement. The Dotted Line marked MA as well as the Line AC having been actually run & carefully measured & the Angle MAC accurately taken. Those of the Commissioners on each Side, who were skilful in such Matters proceeded to make the necessary Calculations for Discovering & Ascertaining the true Course of the Tangent & upon their exhibiting their several Calculations the Commissioners were satisfied that the Tangent Line when run will make an Angle of Three Degrees thirty two Minutes & five Seconds westward with the Meridian Line already run & ought if no Error has been or shall be committed to terminate in the Periphery of the Circle round Newcastle at the Extremity of a Radius or Twelve Mile Line run westward from the Center of Newcastle Court House, in such a Direction, as to make an Angle of Nineteen Degrees three Minutes & fifty five Seconds with the Line of Intersection already run. The Commissioners have thereupon agreed that the said Radius shall be forthwith run which is as much as can possibly be executed this Season, and the Pennsylvania Gentlemen or at least some of them think it will not be necessary actually to

run
