

Spring of the North Branch or to the first Fountain of the South Branch  
of Potowmack. River. I shall not at present trouble Your Ldp. with any thing  
more on that Subject; but only add that I am. My Ld. &c.

Copy of 107<sup>th</sup> Letter to M<sup>r</sup> Calvert. Dated Annapolis 13. Nov. 1768.

Sir With a Triplicate of the Letter I address'd to You the 22<sup>d</sup> of Oct. I  
now send You a Copy of the Commissioners two last Minutes by which  
You will perceive that the Surveyors having continued the Meridian or  
North Line as far up the Peninsula as was necessary & having also run  
a Line from Newcastle till it intersected the Meridian or North Line  
the Commissioners measured the Angle made by those two Lines at  
the Point of Intersection & then proceeded to make the necessary Calcula-  
tions for finding the true Course of the Tangent which it seems must be  
set off & extended westward of the Meridian Line lately run so as at  
the Middle Point to make an Angle therewith of Three Degrees Thirty  
two Minutes & five Seconds, & unless we receive contrary Orders the Sur-  
veyors will be instructed to proceed next April to the Middle Point & set  
off accordingly. The Pennsylvania Gent<sup>l</sup> did indeed intimate to us  
that they thought it might be sufficient by means of Setts off from every  
fourth fifth or sixth Mile East in the Meridian Line to find & mark  
out sundry Points in the Direction or Course of the supposed Tangent  
instead of actually running or describing that Line but as His Ldps  
Commissioners are of Opinion that unless the Boundary Line is run &  
distinguished from one End to the other by visible Marks neither the  
Sheriffs nor Farmers nor even the tenants themselves will know in which  
Province every Tract of Land lies & they conceive it was His Ldps  
Intention to have a Line really run in order to prevent future Disputes
