

shall determine the bounds and the shall hold from that
Intersection by the water side to the first Tree, but in this case or
any Cases parallel if fifty per Cent will not intersect the Branch
Creek or River then the precise Lines and Course to be the bounds
thereof and the covering of Lines shall determine bounds when
the Lines by the water side stands over the Creek River or Branch
and in that Case the Creek River or Branch shall be the bound
of such Trail and it shall not pass over as in the second third
and fourth Examples is demonstrated and the reason why fifty
per Cent is allowed to reach the Creek River or Branch that
if more is there will be no reference between the Creek and the
Course. And if a Trail be described to lie on a certain side of a
Creek River or Branch and begin at a mark tree and run
a certain Course as Suppose North one hundred perches up or
down the said Creek or River to another mark tree by the River
side which second mark Tree is known and really stands by
the water side and make the breadth of the Land within fifty
per Cent, then the second Line supposing East shall be drawn
from the second Tree the certain number of perches supposing
one hundred and fifty and from the end thereof South till it
intersect a Line drawn also East from the first Tree through y^e
said East Line East mentioned be more or less in this Case than
fifty per Cent over or under and from that Intersection a
Line drawn west to the first Tree, the water the west and
the South Line shall be the bounds of such Trail and all
such Trails in Cases parallel, because that generally
labors up of such backward Land have so allowed the Trails
fringing the River to lie and that with good reason and
as for the reasonableness of it it cannot be otherwise enacted
if it should be otherwise enacted it would make a general
