

There be such a winding at aforesaid in cases the line ...
 to the Bound from the Beginning to the Ending. Provided in
 all the adjacent Lands betwixt the Creek and the Line before
 Com to Plant over the Branch Creek or Cove shall be added and
 taken to be part of the Land, that is, so far as the Creek reaches
 as in the Ninth Example. If Land begin at a Mark Tree
 by a River Creek Branch or Cove and to go up or down the said
 River Creek Branch or Cove to an other Mark Tree at the mouth of
 a Creek or Cove to another mark tree at the mouth of a Creek or
 Cove and then be prescribed to run a certain Course and number
 of perches by the said Creek or Cove and the Spending away of the
 Number of perches upon the winding of the said Creek or Cove would
 shorten the Line from Extending far enough into the woods and the
 Creek winds outwards from the Land and carrying from the course
 in this case the full line and prescribed shall be run out and from
 the end of that line shall be drawn a line reverse to the next course
 which is to be run till the line reverse intersect the said Creek or Cove
 and by that intersection it shall describe how far that Tree shall
 be bounded by the Creek and the rest of the bounds shall in such
 case be Ascertained by the fourth Example. as Suppose from the
 second Tree at the mouth of a Cove or the line prescribed East
 one hundred and Sixty perches by the Cove and bounded by the Cove
 and the said Creek winds away East North East and East line of
 one hundred and Sixty perches shall be run out and if from y
 of the East line the course should be South then there shall be
 a line drawn North to the Cove and that North line shall
 at the place where it intersects the Cove how far that line
 shall be bounded by the Cove and then at that Intersection
 South line shall be begun and continued till it intersect
