

stray items and hybrid materials present additional problems in making up individual reels. These considerations require a continuing readjustment of the arrangement scheme to meet new situations and to allow for contingencies arising in future preparation of reels. Notes and cross references in the table of contents are being used as aids in locating and correlating materials which may logically appear to be displaced from a normal order. In time a general index of the collection will provide a more adequate finding tool.

William J. Kimmel, photographer of the initial Legislative Journals Microfilm Project, through his initiative and resourcefulness, contributed greatly toward the working out of a system of extensive microcopy collecting. He has continued to serve the project as liaison in coordinating the editorial phase of the work, with those phases done in the laboratory. Peter L. Long and James C. Hiatt filmed most of Class A material during the expanded project. Pauline E. and William R. Pullen arranged the materials and prepared the tables of contents. Proper reference citation to be made by users of the microfilms will be RSUS., followed by the reel symbol and number and the unit number.

The Check-List of Legislative Journals published in 1938 by the National Association of State Libraries served as a guide in the location of journals and was an invaluable aid in planning the initial work. The Supplement Check List, published in 1941, was the result of additional findings made by the project.
