MISCELLANEOUS.

RENOVATE YOUR FEATHERS, And remove a most prevalent cause of disease. The New Machine, patented September 24th, 1867, by O. C. Monroe, will most effectually accomplish this, without the least possible injury to the Frathers.

The subscriber offers to the citizens of NO TIH EAST nel vi unity a rare chance to avail themselves of the imparalleled benefits of this unrivaled

FEATHER Dressing & Renovating Machine, the most successful patent of the kind ever offered to the public. And I venture the prediction that it never will be excelled for it proves to be exactly what all conditions and qualities of Feathers, from entirely new to old and much worn, need to render them as perfect as age, quality and condition will admit of their being made.

The Cleansing is done entirely by the action of Steam & Vaporized Carbolic Acid;

giving the appearance and essential qualities of NEW FEATHERS, and relieving them from all liability to mothe by the removal of all gunny and glutinous matter from the quill.

Our facilities are such that by short notice we can take and return lieds the same day, well dressed, ready for immediate use, for

Two Dollars per Bed. Physicians and scientific men in hundreds of towns throughout the United States, who have had Feathers Cleaned by this process, have given it the very highest recommendations. recommendations.

Potatoes and Potato Raising.

From "Walks and Talks on the Farm" in American Agriculterist. If I could be sure of 50 cents a bushel at If I could be sure of 50 cents a bushel at digging time, potatoes would pay much better than any other farm crop. But we should make our land rich enough to average 200 bushels per acre. The labor of digging is the main objection to the crop, and the only practicable way of lessening this labor is by getting a large visibly regards. It costs years little more to J. W. ABBAHAMS. Port Deposit, Nov 26, 1870—tf

to the crop, and the only practicable way of lessening this labor is by getting a large yield per acre. It costs very little more to dig an acre that will yield 200 bushels, than one that only yields 100 bushels; and if the poor crop is weedy, as it is likely to be, it will cost more to dig the hundred bushels than the two hundred.

I think you can raise more potatoes per acre, provided the land is rich enough, by planting in rows than by planting in hills, but it costs more to hoe them, and a good deal more to dig them. And so, except on high-priced land, it is, perhaps, better to plant in hills, say three feet aprt each way. Last year I planted my Peachblows 33 feet apart each way, and two sets in each hill, and the tops completely covered the ground. I am convinced that we talk too much about "largo vs. small potatoes for seed," "planting in hills or drills," and depth of covering, and far too little adout enriching and preparing the ground, and keeping the crop free from weeds. If the land is dry, rich, and clean, and the potatoes are planted by the use of the cultivator until there is actual danger of entting off the roots and tubers, and any weeds that have escaped the hoe are afterward pulled out by hand, the chances are favorable for a good crop, no matter what system of planting is adopted. And, on the other hand, if the land is wet and poor, and the weeds are suffered to choke the crop, it is no use sending to Dr. Hexamer for seed, or of asking him what is the best method for cultivation. With all his skill, he cannot tell you how to raise a good crop in such circumstances.— ELKTON, MD.,
Offers his Professional services to the public. Prompt and careful attention given to all Law and Chancery business entrasted to him.
OFFICE—With W. J. Jones, Esq., North street.
July 16, 1870—tf him what is the best method for cultivation. With all his skill, he cannot tell you how to raise a good crop in such circumstances.—
Get the land right, and if you have then time to talk about new varieties, and the best method of planting, well and good; but do not try to get a good crop by any species of agricultural legerdemain. You cannot cheat nature; and all who attempt to do so are ultimately found out and num. to do so are ultimately found out and pun-ished. It is the greatest evil connected with our farming.

Proper Time to Skim Milk.

The milk should be skimmed as soon as all the cream has risen, and before the milk has thickened. The exact time required for the cream to rise, will of course depend upon the temperature, but a little experience will enable one to tell. At the time the cream should be removed, it will have a bright, healthy appearance—a rich, yellow, uniform, and such adherency of particles as will enable one sometimes to remove the entire cream at one dip of the skimmer.

remove the entire cream at one dip of the skimmer.

If allowed to stand too long without skimming, both the quantity and the quality of the cream will be seriously affected; the surface will become discolored, blotched and knobby, while underneath, the cream is rapidly yielding to the corrosive tendency of the acid in the milk. The thickest cream may be as surely destroyed by standing on the milk, as would the finest fabric in a bath of sulphuric acid. When thus destroyed, the cream is replaced by a thin, wattery substance, having no resemblance to milk or cream.

Those facts, which may be easily verified, show how essential it is that the cream should be taken off before the milk has acquired any great amount of acidity.

should be taken off before the milk has acquired any great amount of acidity. Yet, in order to make the largest quantity of butter, care must be taken not to remove the cream to soon. Many neat and thrifty housewives make a practice of "skimming up" the milk at stated intervals, so as to be through with the job. This is of course, very pleasant, but it involves considerable loss, as they do not get the full cream from the newest milk. The milk should all be skimmed at the same age, provided it has had the same conditions as regards temperature, etc. It follows, then, that some milk should be skimmed every night and morning.—North West Furmer.

HENRY WARD BEECHER ON COOKING PEAS.—Pluck the peas at dawn of day; put them in an ice-house, or a cool place. Peas plucked the previous day ought to be thrown to the pigs. Half an hour before dinner, hull them out nimbly, don't throw the peas in water, there is enough contained in the cloister pod. If there are any specked peas pick them out, but the least your warm palms touch them the better. Pour the peas in a stew-pan, and cover with belling water, boil fifteen minutes; if the peas are large, twenty minutes, not a second longer; add a little salt and a lump of good butter; when melted serve up in a warm dish, which will contain neither peas nor butter, but in your ideal glory a delicious broth; dine early; we dine at 12 of the clock. In the summer dine on vegetables and fruits; in the winter meat, if you will. Let your food grow on roots, not on hoofs. HENRY WARD BEECHER ON COOKING

How to KEEP A CHURN FROM FROTHIN How to KEEP A CHURN FROM FROTHING OVER.—Happening one day to visit the house of a friend who kept a cow and made butter, I there saw a simple method he used to overcome the great trouble of all butter makers using the old-fashioned upright churn, viz: the overflow of the cream during the process of churning. His plan was as follows: Take the body of the churn and cut a grown around the It is plan was as follows: Take the body of the churn and cut a groove around the inside of the mouth, about three inches from the top and three-eighths of an inch deep, and then remove half the thickness of the wood, making a shoulder all around; then take the cover and cut it to fit nicely inside and you have now done again with Woolen Manufacturing, inside, and you have now done away with all the old nuisances of cloths, tubs, pans, etc., heretofore required to save the cream that flowed over. Any man, almost, can do this, or the churn may be taken to a carpenter and treated for a few cents. rford's Factory, Many an idea of less consequence than this is patented, but all may take this for what KERSEYS, the undersigned have leased Crawford's Factory, 114 miles north of North East Depot, and are now eagaged making

CHICKENS DROOFING AND DYING.—The Rural New Yorker has the following:—Chickens are very often seen in the poultry yard drooping and moping about, and finally die before any attention is paid to them; and then breeders are profuse in their queries as to what kill their fowls.—One reason is that the chickens are either too highly fed or become lousy. In the former case the food should be chopped eggs, bread and meat scraps from the table chopped fine, and let them have plenty of fresh mold and road sand or gravel. In the latter case, put some wormwood in their water and grease the head thoroughly with lard or fresh butter. In our youthful days the first thing we did after the chicken was out of the shell, was to saturate its head well with fresh butter. This precaution, in our opinion, has saved us many a brood. Which they will Exchange for Wool, or sell at the Louest Rules, guaranteeing them pure stock, equal, if not superior,

Castomers thereby saved more than one trip to the Note of the second of the seco PROFIT IN BEE-KEEPING .- O. C. Wait, PROFIT IN BEE-KEEPING.—O. C. Walt, of West Georgia, Va., Secretary of the Bee-keepers' Association, of that state, writes to the Farmers' Club: "I would like to suggest, that in my opinion the bees are worth more than all the other stock recommended; that with the aid of our modern books and periodicals devoted to bee-culture, with eight or ten colonies of bees, and their 'spirit and determination,' and no other capital, they can lay the foundation for a permanent, interesting, and profitable employment. I would advise them to avail themselves of the experience of others. It is not uncommon for a good apiary to pay 300 per cent. on all capital invested; my own has paid about \$26 for each colony (average,) with very little labor that these stout hearted ladies could not bestow." RAG CARPETS Woven, with Chain furnished or not. Any pattern and quantity of Chain nut in. Chain put in.

One member of the firm always at the Factory to Having both been raised at the business, and being supplied with the best machinery, the firm feels satisfied of its ability to defy competition in J. W. PURNER,

SHYING Houses.—"Allow me," says a correspondent of the Germantoun Tide graph, "having had a great deal of experience in managing horses, to add another bit of advice to nervous horsemen. Whenever they notice their horse directing his ear to any point whatever, or indicating the slightest disposition to become afraid, let them, instead of pulling the rein to bring the horse toward the object causing its nervousness, pull it on the other side.—
This will instantly divert the attention of the horse from the object which is exciting his suspicion, and in ninety-nine cases out of a hundred the horse will pay no mora attention to the object, from which he will fly away if forcibly driven to it by pulling Fresh and Salt Meat, attention to the object, from which he will fly away if forcibly driven to it by pulling on the wrong rein." The practice most persons have of forcing a horse up to the object frightening it only is dangerous and useless.

useless.

PLANT WASH.—The following is strongly recommended for mildow, scale, red spider, etc., upon greenhouse plants, and out-of-door shrubs and trees: Flower of sulpher, 2 ounces, worked to a pasto with a little water; sal-soda, 2 ounces; cut tohacco, 1 ounce; quicklime, the size of a duck's egg; water, 1 gallon. Boil together and stir for 15 minutes, and let cool and settle. In use it is diluted according to the character of the plants, which are to be syringed with water after the application. If any of our readers try this, we advise them to begin with a weak application, as the compound of lime and sulphur is very potent. FLOUR. FEED & PROVISIONS

Ayer's Sarsaparilla, FOR PURIFYING THE BLOOD.

The reputation this excellent medicine enjoy,
is derived from its cures,
many of which are truly
marvellous. Inveterato
cases of Scrofulous discase, where the system
seemed saturated with
corruption, have been
purified and cured by it.
Scrofulous affections and
disorders, which were agravated by the scrofulous contamination untiting, have been radically

Scronlous ancetions and disorders, which were asgravated by the scroftlous contamination until they were painfully afficiting, have been radically curred in such great numbers in almost every section of the country, that the public scarcely need to be informed of its virtues or uses.

Scroftlous poison is one of the most destructive enemics of our race. Often, this unseen and unfeit tenant of the organism undernines the constitution, and invites the attack of enfeebling or fatal disease, without exciting a suspicion of its presence. Again, it seems to breed infection throughout the body, and then, on some favorable occasion, rapidly develop into one or other of its bideous forms, either on the surface or among the vitals. In the latter, tubercles may be suddenly deposited in the lungs or heart, or tumors formed in the liver, or it shows its presence by cruptions on the skin, or foul ulcerations on some part of the body. Hence the occasional use of a bottle of this Narsyparitien is advisable, even when no active symptoms of disease appear. Persons afflieted with the following complaints generally find immediate relief, and, at length, cure, by the use of this SARSAPARILL.

Lat St. Anthony's Fire, Rose or Erysipelats, Tetter, Salt Rheum, Reald Head, Rimprorm, Sore Eyes, Sore Ears, and other cruptions or visible forms of Serofulous disease. Also in the more concealed forms, as Dyspepsia, Dropsyllar and nervous system, Sacilisae, Dropsyllar, Mariani, and the various Ulcerous affections of the muccular and nervous system and Mercurial Disease. But long continued use of this mellicine will cure the complaint. Leworrhean or Whites, Cierine Put of the System and Invigorating affect. Minute Directions for each case are found in our Almanac, vury pilled grails. Rheumatism and Gout, when caused by accumulations of extraneous matter of the system in the blood, tield quicky to it, as also Liercomplaints, Torpidity, Congestion or Infarmation of the Lierc, and Jaumidee, when ainling to be on the blood. This SARSAPARILLL is
