RUDLEY'S

BRICK MEETING HOUSE.

WILMINGTON.

NEW PREPARATIONS.

E. BRINGHURST & CO.

desires to call the attention of physicians and others interested, to the following new preparations of their own manufacture, which are destined to occupy a prominent position as the most popular of the NUTRITIVE TONICS.

Wine and Beef,

each tablespoonful representing the nourishing constituents of one ounce of fresh Beef, with the gentle stimulating properties of Pure Cherry Wine.

Wine of Beef and Iron,

containing the same as the above with the addition of three grains of Citrate of Iron in each tablespoonful.

Elixir of Beef,

each tablespoonful representing the nourishment of one ounce of fresh Beef, with a dessert-spoonful of Finest French Brandy.

Elixir of Beef, Iron and Callsaya,

each tablespoonful of which contains the nourishing properties of one ounce of fresh Beef, three grains of Pyrophosphate of Iron, eight grains of Calisaya Bark, with Finest French Brandy.

The above elegant preparations are palatable and grateful to the taste, acceptable to the stomach and uniform in strength, having for their basis pure Extract of Beef, the nutritive and restorative value of which in debilitated conditions of the system is well established. They are eminently adapted for the treatment of those suffering from the debility resulting from protracted illness, in the sinking stages of typhoid and other fevers, in the exhaustion and fatigue arising from excessive work, loss of appetite, impaired digestion and dyspepsia. As a restorative and invigorator they are invaluable for the convalescent, in the debility accompanying old age, in the rapid growth of children, and in all forms of general debility attended by defective nutrition, nervous prostration, and an impoverished condition of the blood.

FARM AND HOUSEHOLD.

Ogden Farm Papers.

I intimated in my last, that I should have something to say in the future about newly recommended method of setting milk for cream in very deep vessels. The result is so manifest, that it does not seem worth while to wait longer, before stating it. Taking it all in all, I regard it as the most important improvement in butter-making, that has come up in my time. I have just completed the plans and specifications for building an elaborate milk-house for a client in Massachusetts, with water-piping for shelves, having a flow of warm water through them in winter, and cold water in summer; and I have advised that the plan be abandoned, and that a much cheaper one be adopted, suitable for the new, or "Swedish," system. I was brought up on the shallow-pan system, and rarely set my milk more than an inch deep. Having confidence in the source from which I obtained the information in regard to the "Swedish" plan, I had a half-dozen cans made of three sheets of 12-inch by 17½-inch tin, measuring when finished, about 17 inches deep, and 11½ inches in diameter.—I then moved into my summer milk-room (under ground) an unused horse-trough, about 17 inches deep, and large enough to hold five of the cans. Three cans hold most of the milk of each milking, but we are obliged to set some of the milk in the shallow pans yet, and this affords an opportunity for comparison. In the morning we set three of the cans, filled to within an inch of the top, in the trough. At evening only two cans can be put in, the third being put on the floor outside of the trough. My self-regulating windmill, which works in the lightest winds and is rarely still, keeps an almost constant flow of water, from a deep well, nearly a quarter of a mile away, pouring into the trough, and flowing out at its other end. This keeps the temperature at about 58° or 59°. I have not ice enough to keep it as cold as Mr. Swartz does his, and I doubt whether this is necessary. Neither do I skim until the milk has stood nearly 24 hours (just before the second milking,) and I have not even tried to see if it would do as well to skim at the end of 12 hours. At five o'clock on the second morning, the three cans of the previous morning are skimmed; the two of the evening before are moved up to the head of the trough, and the third, which has stood outside, is put in the water. Then two of the morning cans are put in, and the third is set outside. Thus, at each milking, two cans are put at once in the water, and one is left outside for 12 hours, and is then taken in. The following are the results:

1. In ordinary weather, the milk that is set in the old-fashioned pans yields all its cream, but turns a little sour within the 24 hours.

2. The two cans that are put at once in the water, remain entirely sweet, and they yield, as nearly as I can judge without accurate measurement, at least as much cream as we would get from the same amount of milk in shallow pans—possibly a little more.

3. The milk in the can that passes its first twelve hours out of the water—probably because it cools off much more slowly—gets more sour than the milk in the shallow pans, turning quite thick. I think it thickens before it gives up all the cream, as we seem to get rather less cream from this can than from the other two.

4. We make quite as much butter from a given quantity of milk as we did when using pans.

5. The skimming is done with a dipper, and is done much more expeditiously than under the old system, occupying the same time for one can that it did for one pan.

6. We use 6 cans in place of from 90 to 100 pans.

7. The cream is of a uniform consistency, and much more liquid than when so much of its surface is exposed to the air. The cream on a pan of Jersey milk that has stood twenty-four hours is so tough as to seem almost leathery, and can be taken off in a mass—almost rolled off. The cream on one of my cans—two inches thick—is liquid and cannot be taken up with a punctured strainer. I am thus far disposed to attribute to this the fact that the "marbling" of the color of the butter, which we scarcely ever avoided before, has entirely disappeared under the new method; the "O. F." butter being now a pure solid gold color throughout. It is not unlikely that the exposure of so much of the cream to the air affected the color of parts of the butter. Then, again, the cream now mixes thoroughly, and at once, in the cream-pail, while that which was taken from the old pans was always more or less clotted. One of the old-fashioned preventives of "marbling" was to stir the cream thoroughly together whenever a new skimming was added. Hitherto, however thoroughly this was done, the cream was always quite lumpy when it was turned into the churn; it now pours like a smooth syrup.

8. This cannot be called a *result;* it is, as yet, only a suggestion, and one that will be difficult to prove. My butter, from the same cows and the same food, has never been so good as it now is. May not the present improved quality be due in part to the fact that so little of the cream is exposed to the air? Does not such exposure allow an oxidation or evaporation, or other action that destroys or wastes the aroma?

A month is not so long to study the operation of any improvement, but I have studied this one closely, and I am satisfied that my conclusion, under the foregoing heads, is a sound one, and I shall do away with all my old utensils, have a permanent trough made large enough to hold the necessary cans for all my milk, and follow the example of Mr. Swartz, until I find some better way.

I advise all who are so situated that they can keep up a supply of cold water, either with ice or by the aid of naturally or artificially running spring water, and who care for the least work and best results, to do likewise.—*Agriculturist*

Fattening Hogs.

The natural climate of the hog, like the negro, is nearer the tropics; therefore the best time to fatten this animal is before cold weather sets in. It is only on the rich lands of the West, where corn is easily and cheaply raised, that hogs are raised in large numbers with profit.

A small lot of hogs may be kept on every farm with profit as scavengers. Without scavengers, such as the hog and buzzard, the atmosphere would become a great pestilential effluvium. Corn is most profitably fed to hogs when it is a little too hard for roasting ears; when in this stage they will often eat corn, cob, stalks and all.—Hogs should have a spacious lot to feed in, and never be imprisoned in a pen; however they will fatten faster in a close pen; those fattened on the ground with plenty of room will exercise enough to throw off the disease producing matter and are more fit for food. But look at the stupid gluttonous beast imprisoned in his pen wallowing in his own filth; at every breath he inhales the foul emanations from his offal. An animal fattened under such unphysiological conditions must be diseased.

A swill barrel should not be tolerated on any farm; it is always in a state of fermentation; the strong sour smell indicates rottenness; swarms of maggot flies revel in such corruption; let your hogs have the slop before it ferments. The hog being more liable to disease than all other animals and his flesh being the cause of more disease to the human family than all other causes, should be a consideration worth noticing in producing pork. It is officially stated that the loss from hogs that die of disease in this country is annually not less than twenty million dollars; in some counties where distilleries are numerous five thousand have died of disease in one season.

Some farmers give their fattening hogs salt, which will make them gain in weight much faster; but it produces a morbidly increased appetite and occasions constipation. The result is, the animal fills up with effete matters which are accumulated in the cellular tissue in the form of fat.—The animal grows more bulky, and as its commercial value is reckoned by weight, this process of fattening is profitable to those who sell the swine, but not those who eat it; for the adipose accumulation is itself a morbid condition, and the more any animal is fattened the more unwholesome it becomes.—*Ed.*

RECIPE FOR RUSKS.—The night before you wish to bake, take one pint of milk, two tea-cups of good yeast, four eggs, and stir in flour to make a thick batter. Let it rise till morning; then add three cups of butter; one cup of sugar; two teaspoonfuls of nutmeg. Mix the white of one egg with molasses, and rub over the top before putting them in the oven, and also after they are baked. This will make three large tins.

[ESTABLISHED 1849.]

To the Farmers of Maryland.

HORNER'S

Maryland Super-Phosphate

(We court the Chemist's inquiry.)

After 23 years' experience in the Fertilizing business, and after establishing a wide reputation for the purity and excellence of his Bone Dust, the subscriber has been induced to prepare a Phosphate suitable to the requirements and every way worthy the attention of the Southern Farmer.

The "MARYLAND" is a rejuvenator and permanent improver of the soil. It stimulates equal to Peruvian Guano, and sustains equal to Bone, being composed almost entirely of these ingredients, with a very liberal percentage of Potash in the residuum. There is no adulterator nor inferior article used—every particle of the Phosphate being of essential benefit to the land—Neither pains nor expense have been spared in its preparation, and we claim for it the greatest benefit to the farmer from the smallest outlay.

For Cotton, Wheat and Corn, and as a general stimulant and aliment for worn and impoverished land there can be nothing superior. It is warranted to run as high in Ammonia and higher in Bone Phosphate than any other fertilizer in the market.

Price, $50 per ton, in new bags. No charge for delivery. JOSHUA HORNER, Jr.,

Manufacturer and General Commission Merchant, Office and Warehouse, 34 S Gay St. General Warehouse, corner Chew and Stirling Sts., Baltimore, Md.

Bone Dust $45, Bone Meal $50, Dissolved Bone $47, our own manufacture, in new bags; Eastern and Western Bone Dust $35. Peruvian Guano delivered from Peruvian Government Warehouse at lowest rates. No charge for delivery. JOSHUA HORNER, Jr.

VINEGAR BITTERS

J. WALKER, Proprietor. R. H. McDONALD & Co., Druggists and Gen. Agts., San Francisco, Cal., and 32 and 34 Commerce St., N.Y.

MILLIONS Bear Testimony to their Wonderful Curative Effects.

They are not a vile Fancy Drink, made of Poor Rum, Whiskey, Proof Spirits and Refuse Liquors doctored, spiced and sweetened to please the taste, called "Tonics," "Appetizers," "Restorers," &c., that lead the tippler on to drunkenness and ruin, but are a true Medicine, made from the Native Roots and Herbs of California, **free from all Alcoholic Stimulants.** They are the **GREAT BLOOD PURIFIER and A LIFE GIVING PRINCIPLE,** a perfect Renovator and Invigorator of the System, carrying off all poisonous matter and restoring the blood to a healthy condition. No person can take these Bitters according to directions and remain long unwell, provided their bones are not destroyed by mineral poison or other means, and the vital organs wasted beyond the point of repair.

They are a Gentle Purgative as well as a Tonic, possessing, also, the peculiar merit of acting as a powerful agent in relieving Congestion or Inflammation of the Liver, and all the Visceral Organs.

FOR FEMALE COMPLAINTS, in young or old, married or single, at the dawn of womanhood or at the turn of life, these Tonic Bitters have no equal.

For Inflammatory and Chronic Rheumatism and Gout, Dyspepsia or Indigestion, Bilious, Remittent and Intermittent Fevers, Diseases of the Blood, Liver, Kidneys and Bladder, these Bitters have been most successful. **Such Diseases are caused by Vitiated Blood,** which is generally produced by derangement of the Digestive Organs.

DYSPEPSIA OR INDIGESTION, Headache, Pain in the Shoulders, Coughs, Tightness of the Chest, Dizziness, Sour Eructations of the Stomach, Bad Taste in the Mouth, Bilious Attacks, Palpitation of the Heart, Inflammation of the Lungs, Pain in the regions of the Kidneys, and a hundred other painful symptoms, are the offsprings of Dyspepsia.

They invigorate the Stomach and stimulate the torpid Liver and Bowels, which render them of unequalled efficacy in cleansing the blood of all impurities, and imparting new life and vigor to the whole system.

FOR SKIN DISEASES, Eruptions, Tetter, Salt Rheum, Blotches, Spots, Pimples, Pustules, Boils, Carbuncles, Ring-Worms, Scald Head, Sore Eyes, Erysipelas, Itch, Scurfs, Discolorations of the Skin, Humors and Diseases of the Skin, of whatever name or nature, are literally dug up and carried out of the system in a short time by the use of these Bitters. One bottle in such cases will convince the most incredulous of their curative effects.

Cleanse the Vitiated Blood whenever you find its impurities bursting through the skin in Pimples, Eruptions or Sores; cleanse it when you find it obstructed and sluggish in the veins; cleanse it when it is foul, and your feelings will tell you when. Keep the blood pure, and the health of the system will follow.

Pin, Tape, and other Worms, lurking in the system of so many thousands, are effectually destroyed and removed. Says a distinguished physiologist, there is scarcely an individual upon the face of the earth whose body is exempt from the presence of worms. It is not upon the healthy elements of the body that worms exist, but upon the diseased humors and slimy deposits that breed these living monsters of disease. No system of Medicine, no vermifuge, no anthelmintics, will free the system from worms like these Bitters.

J. WALKER, Proprietor. R. H. McDONALD & CO., Druggists and Gen. Agents, San Francisco, California, and 32 and 34 Commerce Street, New York.

☞SOLD BY ALL DRUGGISTS AND DEALERS.

Ayer's Cherry Pectoral,

For Diseases of the Throat and Lungs, such as Coughs, Colds, Whooping Cough, Bronchitis, Asthma, and Consumption.

Probably never before in the whole history of medicine, has anything won so widely and so deeply upon the confidence of mankind, as this excellent remedy for pulmonary complaints. Through a long series of years, and among most of the races of men it has risen higher and higher in their estimation, as it has become better known. Its uniform character and power to cure the various affections of the lungs and throat, have made it known as a reliable protector against them. While adapted to milder forms of disease and to young children, it is at the same time the most effectual remedy that can be given for incipient consumption, and the dangerous affections of the throat and lungs. As a provision against sudden attacks of
