The best modes of treating sows before and after farrowing is believed to be to give also. If we would only pay a little attenthem food that would create a supply of tion to the habits of our farm animals, it

milk for the young. farmers is to move the sow to another pen benefit of good food is lost by giving it shortly before she litters. This is very ir- badly prepared, and in dirty mangers or ritating to her. She should be separated boxes. Ventilation is important; but the from the others, and moved to her new benefit of this will be to a large extent lost quarters several weeks before her time is if the interior of the house is not kept for being short.

ed, and she ought not to be disturbed in ing for the cows; in many cases this is any way, as it is the nature of all animals grossly neglected—the animal being kept to seek privacy at this period. Hogs are in a very uncomfortable condition. As a more true to their time than other animals, rule, the long straw, which is generally and rarely vary more than a day or two.—

Immediately after farrowing but little food way to use straw, is to cut it with the should be given, except some simple drink, straw cutter. This may appear to be a and for several days thereafter judgment costly mode of using it, but it is quite the moderate quantities until the pigs are a form than if used long, and it not only

sow in the finest condition.

Potatoes are as good; and carrots, parsbefore littering. Give also a little charcoal kill their pigs.

Young pigs, after weaning, should have the best of care, and the best food should be given them. Milk, sweet or sour, with a little meal, or oats and corn ground together would be excellent, if properly fed. Young pigs will thrive well upon this kind of food, allowing them plenty of exercise. A fine and successful breeding animal was probably never reared by keeping it continually confined to a small pen. It is believed that more profit could be realized by turning pigs into market at the age of from nine to fourteen months, than at any

The farmer next wants to know what plan of feeding should be adopted to secure the greatest amount of profit? This will depend upon circumstances. First, the price of grain; Second, the expense of grinding; Third, the cost of feed. If the two latter requirements can be cheaply done, it may be made a source of profit.-If too expensive, shelled and soaked corn will pay much better than to feed corn in the car. Ground and cooked feed will make more pork for the amount of corn consumed than if fed in its raw state, or in the ear. But there may be instances, where corn is very cheap and grinding and cooking expensive, that it will not pay. Upon these questions every farmer or pork-raiser must be his own judge, as the circumstances which surround him in different localities differ so widely.

fine buildings you can put over them.

experiment in subsoiling:

as could be alike, with cultivator. No hoeing was done on either place. I think both pieces of land had previously about the same attention, as regards manure and tillage, except that the part I did not subsoil had the advantage of a good stiff sward of clover and timothy turned under the preceeding Spring, after being seeded three years. The result was, that I took from the part plowed the ordinary way, and not subsoiled, but ten bushels to the acre on the average; while from the part bushels per acre as an average. I send cattle and sheep. It is preferred by the you this report of my experiments, hoping that I may hear from others who may have | The product of lucerne is enormous. Five experimented on the same principle, or tons of excellent hay may be cut from an something better.

SPREADING MANURE IN WINTER.-We lucerne for the support of five horses durare asked what advantage there is in ing the entire year. This includes the spreading manure on frozen ground. It great bulk of green food during the Spring, depends much upon the condition of the Summer and Autumn .- Baltimore Ameriground. If it is covered with grass, either | can. a pasture or meadow, there is a great advantage in more than one respect. The surface is protected from sudden changes during winter, and the first thaw carries vention in Newport, N. H., Mr. Pattee, of the manure to the roots, where it causes a vigorous growth early in the spring. If the ground is plowed for a spring crop, it is also benefited by having the manure ready to be absorbed by the soil whenever the ground thaws; the seed, as soon as it sprouts, finds what it needs close at hand. On sod ground to be plowed for corn in the spring, the same advantages are gained as in the case of grass lands, and the manure is on the spot in time, which in a late season it might not be, for want of time or improper condition of the ground. But after all, it is far better to get the manure upon the ground before it is frozen, if possible; the earlier in the fall, the better. Winter top-dressing of grain is only a poor substitute at best for a proper and timely preparation in the fall, and rarely pays for the trouble, unless it may be in the advantage gained by the spring-sown clover. American Agriculturist.

SUNDUING BEES .- The stings of bees were given them for the protection of their stores. They are not disposed to sting when not in danger, and every bee which does sting dies. Away from their own hive they rarely make an attack. The natural dread of stings deter many from keeping bees who would be glad to do so. In the use of modern hives the danger of being stung is lessened, as they give you facilities for subduing them. A bee with its honeysace full never stings. When you alarm a colony of bees, they all instinctively at once fill their sacs with honey, and after time has been allowed them to do this their hive can be opened and examined with no danger from their anger.—Mrs. Tupper. dread of stings deter many from keeping

CARE OF DAIRY COWS.

The stalls should be kept perfectly clean, and not only so, but the walls free from cob-webs and dust; and not less essential is it that the mangers should be kept clean would be seen that they are scrupulously A very common mistake with many clean, almost fastidiously so. Much of the from the presence of dirt. Another point

out. She must be sheltered, and a week clean. It is of little use to admit fresh before she litters, supplied with all the air to the interior, if it is only there to be straw she will want, which will be better mixed with noxious emanations arising After this her nest must not be molest- to be attended to is the bedding or litter should be used in feeding, giving food in reverse. Less straw is required in this week old when a more liberal amount may admits of the "droppings" of the cow be given, and continue to increase it in pro- being lifted easily away without disturbportion to the wants of the sow, always ing the rest of the bedding, but it is, when teaching young pigs to cat as soon as pos- done well, in the best condition for the manure or dung heap. Sawdust also forms To enable the sow to maintain a full flow an excellent bedding, as do leaves and fine of milk, she should have green food which tanners bark. The ammonia, which, in even is usually scarce at this season; you ought ordinary circumstances, rises from the

to provide for the emergency by saving dropping and bedding saturated with urine, roots to feed them. Formerly I used po- and is lost, may be fixed by sprinkling the tatoes for this purpose, but since the pota- bedding and the gutters with sulphuric to rot commenced I have used sugar beets, acid-the oil of vitrol of commerce; 1 lb. and always have some on hand to feed to weight of this will fix the amonia of sixty my sows for several weeks before they or seventy gallons of urine. The liquid come in. They are very fond of them and should be led at once from the house to the eat them greedly raw. A half peck or more liquid manure tank, which will soon pay a day with but little other food will keep a for itself; the using of sulphuric acid will raise the value of the liquid manure that being estimated at ten or twelve dollars a nips, mangel-wurzel, or turnips will do, year per cow. The cost of the acid thus but it may be necessary to boil them and used will be very trifling-an authority mix them with other food. If you have puts it at one-half penny per cow per week. no roots of any kind, you must resort to The best material out of sight for making sulphur, and give a large tablespoonfull floors of cow-houses is "Portland cement two or three times a week for several weeks concrete;" it is easily made, easily laid, economical, and gives a surface as fine and occasionally, and always be kind and gen. as hard as stone. Grooves for giving a tle to them, and they will never attempt to foothold, if thought necessary, and gutters can be formed in it with the greatest case. But not only should the house be kept clean, but it is essential that the animals themselves be so also. It is unnecessary here to describe in detail the influence which the skin has upon the health of an animal; suffice it to say, that it performs a most important function which cannot be performed if the coat of the cow is kept in a filthy condition, filled with dust or coated over with patches of hardened manure; this condition of body induces the attacks and

aggravates the evil effects of lice, &c. All sorts of cures are advocated for this plague of parasites with which cows are afflicted, but if they were kept perfectly clean, there would be fewer occasions when such cures would be necessary. Prevention is better than cure, and by attending to the cleanliness of the cow much would be prevented. Cows should be currycombed, or at all events rubbed down carefully several times a day with a wisp of straw, and all manure removed from their coats. All this may be considered troublesome, as no doubt it is; but then anything worth doing is not done without trouble, and to make cows pay cannot surely be called an unnecessary trouble.

Cultivation of Lucerne Our correspondent who asks for information in regard to the cultivation of orchardgrass for the purpose of soiling cattle, should direct his attention to the value of Every farmer should also exercise his lucerno for that purpose. We have elseown judgment in regard to housing and care where incidentally alluded to its great of his swine. It should also be remembered value by an eminent farmer of Pennsylva- ATTORNEYS AT LAW, 1872 that good buildings do not always indicate | nia, and we cannot too strongly recommend good care. A pen well covered with coarse, it to the attention of the farmers of the wild hay, and kept clean, where the pigs Middle and Southern States, many of whom, are regularly fed and watered, will do more through our instignation, have experiment to forward the growth of pork than all the ed with it during the past season, and others are already ofdering seed in anticipation of sowing it largely next spring. It Sunsoiling Land.—A correspondent of requires to be gotten in well, and the successor to be. T. H. Musgrove, provincent in subsoiling:

Sunsoiling Land.—A correspondent of requires to be gotten in well, and the successor to be. T. H. Musgrove, provincent in subsoiling:

The subsoiling is also in the subsoiling is subsoiling. the Western Rural writes as follows of an ground very liberally manured. These prerequisites being secured, it will afford "Now for the test. I took twenty-two to be cut several times in a season, and it acres of gently-rolling land, equally well will not be requisite to be resown for seven drained by natural drains or ravines, all of or eight years. A top-dressing of superwhich had been in cultivation from thirty | phosphates or bone earth or ashes every to thirty-five years, and pretty well worn. other year will keep it up to a high stand-I subsoiled eleven acres. This portion had ard as a food-producing plant for cattle. never been seeded to grass of any kind to About iffteen to sixteen pounds of seed to my knowledge-at least not for many the acre is required at the first setting, years. The other eleven acres I plowed which varies in price from sixty to seventythe usual way; that is, what would be five cents per pound, according to circum termed shallow plowing. It was all plant- stances. The Agricultural Bureau at ed about the same time, cultivated as near Washington has distributed very widely the seed of the lucerne, and the Commissloner says that "the most favorable accounts of success in its culture have been returned." Mr. Moward, a well-known writer at the South, says that "as a forage plant at the South lucerne is very far superior to others." It is used for three purposes: First, for feeding green, or soiling used in this way, it is best to cut the lucerne a day in advance, so as to feed it in a wilted state. It must never be pas-tured. \* \* \* Lucerne bay is extremewhich was subsoiled I took thirty-five ly nutricious, and is relished by horses, domestic animals to any other kind of hay.

> REDUCING BONES .- In the discussion of wheat culture, at a late agricultural con-Warner, gave a formula for reducing bones, as follows: Place them in a large kettle. filled with ashes and about one peck of lime to a barrel of bones. Cover with water and boil. In twenty four hours all the bones, with the exception, perhaps, of the hard shin bones, will become so much softened as to be easily pulverized by hand. They will not be in particles of bone, but in a pasty condition, and in excellent form to mix with muck, loam or ashes. By boiling the shin bone ten or twelve hours longer, they will also become soft. This is an easy and cheap method of reducing ones. If the farmer will set aside a cask for the reception of bones in some convenient place, and throw all that are found on the farm into it, especially if one or two dead horses come into his possession, he will be likely to find a large collection at the end of the year, which would prove a valuable adjunct to the manure heap.

acre. It is estimated that fodder, green

and dry, may be obtained from an acre of

PUMPKIN PIES .- Cut the pumpkin into small pieces; take out the seed and inside, but do not pare it. It must be well grown thoroughly ripened and not watery. Put the pieces in a saucepan, with only a few spoonfuls of water-not more than four: cover close and let it cook gently, so as not

Ayer's Cherry Pectoral, For Diseases of the Throat and Lungs, such as Coughs, Colds, Whooping Cough, Bronchitis, Asthma, and Consumption.

Among the great discoveries of modera science, few are of more real value to mankind than this ef-fectual remedy for all diseases of the Throat

mankind than this effectual remedy for all diseases of the Throat and Lungs. A vast trial of its virtues, throughout this and other countries, has shown that it does surely and effectually control them. The testimony of our best citizens, of all classes, establishes the fact, that Chenny Pecronal will and does relieve and cure the afflicting disorders of the Throat and Lungs beyond any other medicine. The most dangerous affections of the Pulmonary Organs yield to its power; and case of Consumption, cured by this preparation, are publicly known, so remarkable as hardly to be believed, were they not proven beyond dispute. As a remody it is adequate, on which the public may rely for fail protection. By caring Coughs, the forerunners of more serious disease, it saves unnumbered lives, and an amount of suffring not to be computed. It challenges trial, and convinces the most sceptical. Every family should keep it on hand as a protection against the early and unperceived attack of Fulmonary Affections, which also easily met at first, but which become incurable, and too often fatal, if neglected. Tender lungs need this defence; and it is unwise to be without it. As a safeguard to children, amid the distressing diseases which best the Throat and Chest of Childhood, Chernary Pectonal, is invaluable; for, by its timely use, multitudes are rescued from premature graves, and saved to the love and affection centred on them. It acts speculity and surely against ordinary colds, securing sound and health-restoring sleep. No one will suffer troubesome Influenza and palnful Bronchitis, when they know how easily they can be cured.

Originally the product of long, laborious, and successful chemical investigation, no cost or toli is spared in making every bottle in the ulmost possible perfection. It may be condently relied upon as possessing all the virtues it has ever exhibited, and capable of producing cures as memorable as the greatest it has ever effected.

Dr. J. C. AYER & CO., Lowell, Mass., Practical and Analytical Chemists, SOLD BY ALL DRUGGISTS EVERYWHERE

THE most WONDERFUL DISCOVERY of the 19th CENTURY. MILK CURE CONSUMPTION

consumptive and the afflicted, raing to its present great demand, upon its own merits, during which period it has effectually cured not less than 10,000 Men, Women and Children, who were most seriously afflicted with Cougha, Colds, Influenza, Asthma, Whooping-Cough, Croup, Spitting of Blood, Night Sweats, ironchitis, &c., without a single failure. During the same period the Arabian Blilk-Currand Arabian Tunic, sombined, have cured over 2,000 cases of Consemption, many of which were pronounced incurable, but who are now restored to perfect Health.

Sole Proprietor, New York.
Sold at DR. MITCHELL'S DRUG STORE, S.-le Agen
for Elkion, Md. [spril 6, 1872-66]

Every year increases the popularity of this valuable Hair Preparation; which is due to merit alone. We can assure our old patrons that it is kept fully up to its high standard; and it is the only reliable and perfected preparation for restoring GRAY OR FADED HAIR to its youthful color, making it soft, lustrous, and silken.
The scalp, by its use, becomes white
and clean. It removes all eruptions
and dandruff, and, by its tonic properties, prevents the hair from falling
out, as it stimulates and nourishes the hair-glands. By its use, the hair grows thicker and stronger. In baldness, it restores the capillary glands to their normal vigor, and will create a new growth, except in extreme old age. It is the most economical HAIR DRESSING ever used, as it requires fewer applications, and gives the hair a splendid, glossy appearance. A. A. Hayes, M.D., State Assayer of Massachusetts, says, "The constituents are pure, and carefully selected for excellent quality; and I consider it the BEST PREPA-RATION for its intended purposes." Sold by all Druggists, and Dealers in Medicines. Price One Dollar.

Buckingham's Dye. FOR THE WHISKERS. As our Renewer in many cases requires too long a time, and too much care, to restore gray or faded Whiskers, we have prepared this dye, in one preparation; which will quickly and effectually accomplish this result. It is easily applied, and produces a color which will neither rub nor wash off. Sold by all Druggists. Price Fifty Cents. Manufactured by R. P. HALL, & CO., NABHUA, N.II. June 22, 1872-1y
