The "Hints" in the March number of the American Agriculturist, contain so much valuable information and so many excellent suggestions to the farmer that we transfer them to THE salts, aloes, rhubarb, gentian, ginger, Willa for the benefit of our agricultural readers who do not see the Agricult-

Make up your mind what you intend to do. Sit down and count the cost. Do not undertake more than Hot Water.—Blessed is the farmer in a hot-bed. A frame of this kind any cost. Do not undertake more than you can perform. It is unwise to commence work that you are not able to er team, and pay the wages of a man kitchen. for a year. This has, at any rate, been Hay true more than once in our own experience. Have you not found it so?

WHAT THEN SHALL WE DO?-Shall we buy more horses and hire more men? Not if we can help it. It would probably be better to plow less land. This is a point each farmer must decide for himself. All we can say is, do not get behindhand with your work. Almost anything is better than this.

THE SEASONS DO NOT CHANGE.—We

are quite apt to blame the weather. And yet it is a matter of fact that there is no change in our climate. There have always been wet years and cold years and years of great drouth. We should be prepared for them.

UNDERDRAINING on all wet soils is indispensable to real success in farming. A well drained and well-worked heavy soil is rarely affected by drouth. Every enterpriseing farmer will do more o less draining every spring. If he once commences to underdrain, and does the work well, he will not be likely to stop untill he has made all his land dry.

Top-Dressing Grass-Land is a grand means of ameliorating the effect of drouth. Spread the manure as early as possible in the spring, and if you have a Thomas harrow use it freely to break up the manure.

Go OVER THE FARM as soon as the snow melts in the spring. You will they will soon be strong enough to a take care of themselves. Give the sow Make a note of them and prepare to do them at the right time.

LET OFF THE SURFACE WATER .-This is always in order. Farmers will take, the better. In three or four days let it off wheat, but very few ever think of letting it off a bare stubble. If there is no crop to kill, they think it can do sow gives more milk. At two weeks no harm. A few hours' judicious labor will often let off more water in a day than the sun at this season can evapor

MAKE YOUR WALKS DRY .- Put down planks or boards if necessary; but it is far better to get the water off You can do this if you attend to the matter before the water soaks into the

IRRIGATING GRASS-LAND at this season is a capital thing, provided the land rests on a dry porus subsoil or is all the water you can, instead of getting more on to them.

DRAIN FIRST, AND THEN IRRIGATE .-This will double or treble your grass crop and not injure the quality. There are many streams that might be easily dammed up the water diverted over acres of grass-land at a small cost. It

when most convenient-from one to two bushels per acre is enough. It will do no good on low, wet land. Repair the Fences .- This can be done

at times when other work is not pressing-say after a rain, when the ground is too wet to plow.

Piling Manure should be done, if the yards directly on to the land. We ture use. Do not leave it spread out all over the yards and premises.

Plowing should not be done while the land is wet. Much, however, depends on the kind of soil, and whether it was fall-plowed or whether it is sod. The latter always seems drier than the former. As a rule, it may be said that no land should be plowed when it sticks to a bright steel mould-board.

Three-horse Teams should always be used wherever practicable. They are far more effective than two horses One man can manage three horses as well as two, and will accomplish half as much again work. For plowing, harrowing, rolling, cultivating, drawing off heavy stones on a stone-boat, and for drawing heavy loads on a wagon, there is great economy in using three

Good Implements .- Great loss is incurred on many farms by using poor implements and tools. The higher wages are, the more important it is to economize labor. A good plow, as compared with a poor one, will more than pay for itself in a week's work. Harrows should be made heavy enough for three horses and should take wide sweep. The old 32 teeth drags are behind the age. Get a good Scotch barrow with 40 teeth and keep the teeth sharp. We seldom harrow our

Rollers are best made of plank and in two sections, Keep the plank saturated with petroleum. They will last as long again. Do not forget to oil the enough to receive the seed Care

A Cultivator for Three or Four Horses abreast is a very effective implement. The great trouble with them is that they are rarely strong enough, and the teeth are usually too wide and do not slant enough forward. At this the plants will be ruined. Some time and the teeth are usually too wide and season we want them to stir the land since, I was called to examine a hot--not to cut off weeds.

purposes besides drawing off stones. warm, give the glass a thin coat of Always take one with you to the field whitewash. This gives a little shade -and have on it a crowbar, an axe, a and, with some air during the middle spade, a hammer, a monkey-wrench, and of bright days, will make all safe. The a box of nails, bolts, etc. Keep the bot- hot-bed is made by forming a pile of tom of the boat saturated with horse manure with the straw used for

ble. We keep a barrel of it always on straw and manure will be equally mix-

The Cellar.—Whatever you do or fail to do, do not neglect the cellar under the house. Remove everything der the house. Remove everything that is decaying. Clean up. White-that is decaying. that is decaying. Clean up. White-warm. It is better to wait a day or two after this, and then sow the seeds.

Cutting Fodder.—If you do this by horse power, cut up enough now to

Things You should Always have on in the garden. By the exclusion of air

Hand. Some of these cold mornings, and the admission of sun, the earth be- DRY GOODS and GROCERIES, a cow will calve. You tell your man to "give her a warm bran-mash." "But." he replies, "we are out of bran." frame is secured in its place, a couple This should not be. Bran is one of the of inches of fine earth should be placed things that should always be on hand. Salt is another. And so is flaxseed. Unless you are within easy distance of a drug-store, it is well to keep a few sun for its warmth, it must not be start-common medicines on hand—such as ed as soon as the hot-bed, and in this and laudanum. Keep them under lock and key. A syringe for giving injec-tions should always be kept—and kept in order. A slight attact of colic can

one can manage. Watering occasionwho at this season can always be sure of getting a gallon or two of hot water whenever he wants it. This is a luxube given on bright, warm days. Shade finish in due season. Many a farmer loses more by getting behindhand with his spring work than would buy anoth- have to depend on "hired help" in the

Hay Tea is made by pouring boiling a simple frame or box, with a couple of water on to chaffed hay. Clover is best. It is an excellent tonic for all animals.

Corn Pudding " is easily made by small it would be better to have the stirring commeal into boiling water. A quart or two of this hot "pudding" put into a pail of skimmed milk and well light of glass at each side and on the Corn Pudding" is easily made by mixed, is grand food for young pigs that you wish to push forward rapidly. Swine.—Keep the pens clean and lry. See that they are well ventilated. of the ground, and afford the plants shelter from sudden changes of the temperature, cold storms and frosty nights.

Young pigs should be fed all they will eat and digest. Nothing is better for them than corn-pudding and milk. As the pigs get older and the weather warmer, corn-meal, soaked for 12 or 24 hours in cold water, may take the place of the "pudding."

Breeding Sows should have as much Stercise as possible. Do not keep more of office—On Main Street, opposite National Bank, Elk ton, Ma. than three or four in a pen. And week or so before farrowing put the sow by herself in a warm pen. Feed plenty of bran. If the bowels are not oose, give some Glauber's salt in the food, say a teaspoonful at each meal until it effects the object. If the sow s poor and weak, boiled linseed or oilake will be better than the salts. If the sow is quiet and you can be with her in farrowing, throw a blanket over her and keep the little pigs under it while they are sucking. The heat from the sow will keep them warm, and bran-mashes, and put in a little salt, say half a teaspoonful once a day. The w. J. JONES. more warm water and bran she will

MANURE.

sow gives more milk. At two weeks old the little pigs will begin to eat, and

should have a trough separate from the

We had been taught that from the ime when the manure was first voided by the animal it was subject to constant loss from the evaporation of ammonia—its most valuable ingredient and that consequently it was the only safe plan to compost it with muck or of manure at different stages of decomposition, and after various sorts of treatment, that there is no formation of Gucumber Wood Pumps, position, and after various sorts of volatile ammonia except when the mass is sufficiently large for the accumulation of enough heat to favor an active decomposition, and that even then there is no evaporation of ammonia, for the reason that the organic is a mistake to suppose that irrigating is only necessary in dry weather. It —are always sufficient to take it up and is only necessary in dry weather. It does great good on grass-land early in the spring. Try it.

—are always sufficient to take it up and form non-volatile compounds. At the same time, although these compounds Sow Grass and Clover Seed on are not subject to evaporation, they are Wheat early in the spring, unless you propose to harrow the wheat. It is selfrom the dung-heap, and the rain-water dom that the seed is injured by the passing through it, remove it most frost. Do not spare the seed, and be easily. Consequently, it is of the greatest importance that manu PLASTER may be sown at any time be kept under cover-if it is kept in store at all. The most important deduction from these investigations is. that the much-reiterated recommendation of agricultural writers that on no account should manure be taken to the field (unless to be composted) until it could be almost immediately plowed under the soil, was not well founded

done at all, early in the spring. Many The best practice of all, is one which farmers prefer to draw manure out of the most successful farmers the vards directly on to the land. We will not argue the question here. All which the agricultural press has we say is, do something with the manure. Either use it now or keep it for fu- tice, namely, of hauling manure afield as soon as a few loads have accumulated, spreading it at once over the ground, and plowing it under early or late or not at all, according to circumstances; the best effects following its application to the surface of grass-land, or its harrowing into the very topmost film of plowed land. In neither of these cases can ammonia escape, be-cause no volatile ammonia is formed, while the soluble parts—are distributed through the soil by the water of rains the more evenly, the nearer to the surface they lie. When they are once alsorbed by the soil they are held in an available form until required by the roots of plants. Of course, this is too short a statement of the deductions of

an elaborate investigation to give a very fair idea of it. THE FLOWER GARDEN.

HOT-BEDS AND COLD-FRAMES.

To overcome the evils pointed out in our last article hot beds are useful .-By being protected at the sides and ends with boards, and covered with glass, they confine the moisture which arises from the earth and thus the atmosphere is kept humid and the surface moist, and the plants are not subjected to changes of temperature, as a uniform state can be maintained no matter what the weather may be. The bottom heat of the hot-bed warms the soil, and enables the grower to put in his enough to receive the seed. Care, however, is required to prevent scorching the young plants. In bright days the heat is intense inside the frame, and unless air is freely given, or some course taken to obstruct the rays o bed, as the seeds planted did not grow, Grain-Drills Pay.—Except they lack when I found they had been all burned a steering apparatus, our drills are the best in the world.

up, except a few along the edges that were shaded by the sides and ends of Stone-Boats are very handy for other the frame. When the sun gets pretty bedding, or leaves, some three feet in height. Shake all together, so that

Ayer's

Hair Vigor,

For restoring to Gray Hair its

natural Vitality and Color.

gloss and freshness of youth. Thin hair is thickened, fallen hair checked,

and baldness often, though not always, cured by its use. Nothing can restore

the hair where the follicles are de-

stroyed, or the glands atrophied and

decayed; but such as remain can be saved by this application, and stimu-lated into activity, so that a new

growth of hair is produced. Instead of fouling the hair with a pasty sedi-

ment, it will keep it clean and vigorous.

Its occasional use will prevent the hair

from turning grey or falling off, and

consequently prevent baldness. The restoration of vitality it gives to the

scalp arrests and prevents the forma-tion of dandruff, which is often so un-cleanly and offensive. Free from those deleterious substances which make

some preparations dangerous and inju-

rious to the hair, the Vigor can only

benefit but not harm it. If wanted merely for a HAIR DRESSING,

nothing else can be found so desirable.

Containing neither oil nor dye, it does

not soil white cambric, and yet lasts

long on the hair, giving it a rich, glossy lustre, and a grateful perfume.

Prepared by Dr. J. C. Ayer & Co.,

Practical and Analytical Chemists, LOWELL, MASS.

Is widely known as one of the most effectual remedies effectual remedies ever discovered for cleansing the sys-tem and purifying the blood. It has stood the test of years, with a con-stantly growing rep-ntation, based on its stood the test of years, with a constantly growing reputation, based on its intrinsic virtues, and sustained by its remarkable cures. So mild as to be safe and beneficial to children, and yet so searching as to effectually purge out the great corruptions of the blood, such as the scrofulous and syphilitic contamination. Impurities, or diseases that have lurked in the system for years, soon yield to this powerful anti-

and syphilitic contamination. Impurities, or diseases that have lurked in the system for years, soon yield to this powerful antidote and disappear. Hence its wonderful cures, many of which are publicly known, of Scrofitin, and all scrofulous diseases, Ulcers, Eruptions, and eruptive disorders of the skin, Tumors, Blotches, Bolls, Pimpules, Pustules, Sores, St. Anthony's Fire, Rose or Erysipelas, Tetter, Sait Rheum, Scald Head, Ringworm, and internal Ulcerations of the Uterus, Stomach, and Liver. It also cures other complaints, to which it would not seem especially adapted, such as Dropsy, Dyspepsia, Fits, Neuralgia, Heart Disease, Female Weakness, Debility, and Leucorrhuea, when they are manifestations of the scrofulous poisons.

It is an excellent restorer of health and strength in the Spring. By renewing the appetite and vigor of the digestive organs, it dissipates the depression and listless languor of the season. Even when no disorder appears, people feel better, and live longer, for cleansing the blood. The system moves on with renewed vigor and a new lease of life. ELKTON, MD. Promptness! Low Prices!
