Story of Meshach Browning, the Mary-

land Nimrod. Near the confluence of Sang Run and the Big Youghlogheny lived until recently Meshach Browning, a celebrated Maryland hunter, who "escheated" about one thousand acres of land in the latter part of his days, built a grist mill, and left a name revered by a large posterity. He was the son of a subaltern English soldier who escaped from Braddock's battle, and was born in Frederick county, Md., in 1771. He never saw his father, and his mother married again. His childless aunt took him to Western Maryland, and he kept his first remembrances as an inmate of old Tech Friend's cabin, in Buffalo marsh, He was the legitimate successor of the first ploneer of the country, and lived down to the period of our civil war.

Meshach Browning never had more than

six months' schooling. After St. Clair's

defeat his uncle fell back with some forty settlers to Blooming rose, where the future hunter met his woodland wife. He married her against the opposition of her father, who turned them both out of doors. After this he hunted constantly, seldom wearing his hat on the hunt, and often killing bears, buck deers, and even panthers, in close grapple, with his hunting knife. He began to hunt in 1795, and killed his last game in 1839. In that period he killed from 1,800 to 2,000 deer, between 300 and 400 bears, 50 panthers and catamounts, and scores of welves and wildcats. He also begot a posterity at the time of his death, of six sons, forty-four grandsons, and seventeen great grandsons and five daughters, thirty-two granddaughters and eighteen great-granddaughters-in all 122. At the time of the second war with England this simple old mountaineer was beguiled by rival partisans to abandon following the army, a subject of great remorse to him all his days. He also fought a terrible battle with the laborers on the National road, at Selbysport, in the same war, when he un dertook to muster them as military captains. About 1814 he began to carry peltries and venison to Georgetown and Baltimore, and in 1824 he put up his mill. In 1826 he visited Annapolis, and, although a Marylander all his days, tasted there the

Tropical fruits are generally juicy, sweet, with a slight admixture of acid, luscious, and peculiarly agreeable in a warm climate; and when partaken of with temperance and due regard to quality they are highly promotive of health. WHY A CHILD LOVES SUGAR.-The craving of children for sweets is well known to be one of most imperious of their appetites. It has reference probably to that ceaseless activity which especially characterizes the age of childhood. It may be that sugar performs in their systems the part enacted by fatty substance in the bodies of adults. As it undergoes oxidation-is burnt up, circulating with the blood-it may be the source of the power which enables them to keep in motion from morning to night. Besides this. it is known that it renders easier and more perfect the digestion of the albuminous food upon which their growth depends. In respects to these offices, it is, therefore, nearly essential to their well-being. And yet how strong, for generations, has been the prejudice against sugar! Under what difficulties, and in the face of what discouragements and protests have our children obtained the luxury.
