Having decided what breed to raise, the first important step is to know how to choose a good cow. These are a as much wedge-shaped as may be; stirring it with the hoe to keep down that she increases in height and depth from a front view that from a small and free from depreciating marks. 3rd. tops leaned a little. In this way two
See that her milk veins are large and rows of brush support three drills of Gout, Gravel, Strictures, Diabetes, prominent, and where it enters the full in the forward part, and that the teats are of good size, well separated, and not too projecting towards the sides.

A general examination should show the head small, slender, and lengthy from the eye to the nose; the horns thin and open, not cramped or too curly; the eye full, but not too prominent, the latter quality indicating an excitability and consequent restlessness of disposition that is not favorable to the production of milk; the ear lengthy and broad, and well fringed with hair, which protects it from the annoyance of flies and indicates a strong constitution; a broad muzzle should be avoided, as showing a tendency to fat; the neck should be long, flat and narrow, with a tendency to rise at the withers, and breadth behind the arm to allow of a full expansion of the lungs, the chest provision is an absolute necessity, being rather deep than broad; the flatsided cow is more especially to be chosen as a milker; the hips should be wide, rugged and high, and the pelvis or haunches wide and large, drooping towards the tail: the thigh long and lean from hip to rock, the veins being prominent and easily felt; the legs slender with flat bone, and small flat feet, the hinder ones having good width between, to afford room for the udder. A long and thin tail is a great point in breeding.

The udder, to which all former points

should be free from hair, flexible and soft, with no tendency to flesh; the bag extending well forward, as level as possible with the belly, and high up be-tween the thighs. The feeding veins should be particularly observed. In the heifer with the first calf they must be felt for with the hand; in their case two holes will be discovered by feeling under the belly nearly in line with the navel, on each side, in good milking heifers, of about the size of a dime. As age increases the holes extend, and the veins large and easily perceived by the eye; the larger these feeding veins appear, the greater is the quantity of the milk. The teats should be well separated, not fat or fleshy, and not too long, but sufficiently tight to retain the milk, having a tendency downward—that is, to use the technical term, not "strutting," or pointing away from the quarters, as this causes waste in milk and difficulty in milking. The hide also will be found useful in determining the fitness of particular cows for particular localities, but having little to do with the milking properties. If possible, it is better to accustom a cow to cold and exposure by degrees, in which case the hide will adapt itself to the altered condition by thickening and producing more hair.

A good cow not only yields much the quantity given daily is there a long sentimenes of the segretion between continuance of the secretion between periods of calving. But no cow should be allowed to give milk beyond eight months, before calving; the system requires at least one month's rest; the calf will be larger and healthier, and the mother will yield better and richer milk after calving.

The fact that the system is more capable of undergoing natural, though very marked, changes in early life without danger, renders a young animal in-dispensable for the dairy, either to breed from or to prove profitable to the keeper. To determine the age of a cow is therefore a matter of importance, and this can be done with great precision by examining the teeth and horns. To determine the milking qualities of

a cow many important points have to be considered. In addition to those we have mentioned, the skin should be free, thin, and may be covered with hair of any color, according to the breed. The tail is by some much looked to, and it is believed that when fine, and reaching down to the hocks, with a fine tuft of hair, it is associated with other good milking points. In addition to large milk veins the network of veins seen beneath the skin over the forequarters of the udder, and the udder itself, and those which pass upwards behind towards the tail, in fact, over the perineum, are large, they are sure tests of a competent milker. They should be highly developed, large and it can be made not only a pleasant but varicose; they are irregular, in zigzag a profitable business. And if my land lines, knotted, and more or less oblique. To estimate them it is necessary to crops larger and more profitable I hope take into account the state of the cow in respect of flesh, the thickness of the told of my failures and the reasons for skin, food, general activity, fatigue, journeys, heat. It is necessary, also, to recollect that in both sexes all the veins are larger in the old than in the young; that the veins which encircle the udder are those which, if the cows are in milk, vary most according to the differedt periods of life; though scarcely apparent in youth, they are of considerable size when, after several calvings, the operation of calving has given the gland its full development.

## GROWING GARDEN PEAS.

Cor. Germantoien Telegraph. Having been a successful grower of

peas for more than forty years, and having tried various way of planting and cultivating, I offer some suggestions on the subject. I have found a light sandy soil to be the best adapted to growing peas, especially for the early market. In such a soil the seed is not so liable to rot as when planted in heavy clay. Peas do not require very rich soil, although they are a heavy draft upon the land. Should the land intended for peas be very thin, it is better to manure northern part of the State and in southit in the fall than the spring of the ern Pennsylvania, one of the best early year. As soon as the manure is applied it should be turned under the sur-and on that account will not perhaps face, and when the spading is done in be profitable for market, but it is the spring it comes up thoroughly rotted, making the land warm and loose. Those who want something good to The rows of peas should invariably run cat, as well as something to sell, will north and south. When so located the sun shines on both sides of them, which is very essential in maturing the pea.

In the summer of the most desirable. Further north the Primate, a large I plant three drills near together, say

five inches apart, then leave a space of be glad to know how it does in our three or four feet, owing to the height, special district. the variety I am planting grows. Then another row of three drills, and continue the operation until the bed is filled, being careful to get the tall grow- "We have many stagnant pools about

ers at the outside of the bed. about one-third thicker in the drill than | years' experience in experiments.

late ones, as they are more liable to rot in the cold ground. Assoon as the first sowing begins to come through the ground, spade more of the bed and plant again, repeating the planting at like periods until the latter part of

May. I commence working my peas as few general rules: see that the cow is soon as they are fairly out of the ground, that is, viewing her from the side view, the weeds. When the peas are about five inches high I bank them up a little the further you go from the head; and putting fresh earth close around the young stalks. They should then be head and narrow neck and shoulders stuck with suitable brush, cut tolerably she gradually and regularly enlarges to straight and sharpened a little, then a broad hip and back. 2nd. See that pushed into the ground close to the her "mirror" or "escutcheon" is good outer edge of the outside drills and the peas. As soon as the early planting stomach that the hole, or better if two, are large and deep; that the udder is vines, spade the land and plant for a fall crop. Never save seed from the vines after the best of the peas have been gathered for table usc. Either let BLADDER & KIDNEYS, all the peas remain on a part of the row until they are fully ripe or buy new

> For early peas I plant Virginia Hotspur, (now called Early Tone,) Carter's First Crop and Early Kent. They are hardier than any other varieties I have tried. For later kinds, I prefer McLean's Advancer, Eugenie, Bishop's Long Pod, Imperial and Champion of England.

GREEN FOOD FOR FOWLS -The last requisite in the shape of diet is a regular supply of green food. Here, again, fowls kept on grass will need no attenthough most beginners are ignorant of it. We well remember, in our own

early experience how our fowls died, we could not at first tell why; and one fine Buff Cochin cock, whose only fault was a strong vulture-hook, was, in particular, greatly regretted. An experienced friend let us into the secret; and after that we had no difficulty in keeping fowls, even where it is often said they cannot be kept in health, viz., in a yard paved with large flag-stone. The best substitute for natural grass is a large fresh turkthrown daily to each four or are secondary, the reservoir of the milk ible to procure this, by giving children a few pence every week to keep a regular supply. Where turf is not allowed to be taken, grass may be cut or pulled; but in this case must be cut into green chaff with shears or a chaff-machine. The latter plan is how we actually managed for years in a yard only 67 by 35 feet divided into six pens; paying some child a few pence to bring fresh-cut grass daily, cutting it up and mixing it

with their soft meat.

INCOME FROM COWS .- The "Mirror and Farmer" says: "Ward Parker, Esq., sends us a statement of the profits realized, in 1872, from five devonsfour cows and one three-year old heifer. He commenced March 1st 1872, with one cow, to make butter; the next cow came in March 4; the other two came in the first week in April; the heifer came in the 1st of May. The butter sold from the five amounted to \$396; oremiums at fairs on the five cows, 84; three calves sold for \$170; two calves on hand reckoned at the same as was offered last October, \$130; to all amount, \$780. The same cows also furnished all the milk, cream, and butter used in the family during the year. This is the income of the five up to the time they went dry. The same cows good milk, but almost in proportion to all calved last Spring, after going three milk and cream used in the family h estimates would more than three times balance the hay and other feed used for

> The following advice, though intended for Winter management, may be very profitably acted upon during this and next month:

the five calves."

DWARF PEAR TREES .-- You will, on examining your dwarf pear trees, find that they are not probably making as strong a growth as may be necessary for their best success and for the finest fruit. Now is a very suitable time to enrich the soil over the roots by applying a good top dressing of stable or yard manure. Do not heap it in a pile at the foot of the stem, but spread it broadcast in a wide circle, so that the long roots may get the benefit to their very tips. The rains and melting snow will dissolve much of the manure and carry it down into the soil among the roots, and give the trees a new start. Next spring the part which remains on the surface may be lightly spaded in, or if in an orchard, it may be worked in with a light plow, cultivator or har-

FARMING AS A BUSINESS .- Mr. Jos Harriss in his Walks and Talks for January, in the "Agriculturist," says: is getting cleaner and richer and my them. I want to tell of my successes -if I ever have any. I think the reados of agricultural papers do not need information so much as exhortation. What we want is encouragement, (Successor to STANTON & MOORE,) we want to believe that good farming will pay-and it most certainly will. Or if it does not, no other business in the community can long continue to

Parsley.—Every good housewife wants a supply of Parsley, and the way to make a good housewife is to be careful to anticipate all her little wants of this kind. Very few gardens have parsley, and chiefly because it is not sown early enough. It ought to be one of the first seed sown after the frost leaves the ground. It takes generally about six weeks to grow after sowing, but this period may be shortened by steeping the seeds for two or three days in water before sowing. It likes rich, heavy ground, but not where it will be burned too much in Summer.

A Good EARLY APPLE.-In the white apple, is in demand. We should

A NEW SPECIAL CROP.-Seth Green, the renowned fish culturist, writes thus: the country that are useless in their As soon in the spring as the ground present state, and, believing that nothis sufficiently dry to work, I spade as ing is made in vain, I do not know of much of the bed as I desire to plant at that time. Rake it tolerably even and frog ponds. I also believe it would plant as above directed, covering the make the man wealthy who could raise peas about four inches with well pulver-ized soil. Early peas should be sown All I would claim is giving him two

MEDICINAL. ANNUAL STATEMENT

Dr. J. Walker's California Vinegar Bitters are a purely Vegetable preparation, made chiefly from the na-tive herbs found on the lower ranges of the Sierra Nevada mountains of California, the medicinal properties of which are extracted therefrom without the use of Alcohol. The question is almost daily asked. "What is the cause of the unparalleled success of VINEGAR BITTERS? Our answer is, that they remove the cause of disease, and the patient recovers his health. They are the great blood purifier and a life-giving principle, a perfect Renovator and Invigorator of the system. Never before in the history of the world has a medicine been compounded possessing the remarkable qualities of VINEGAR BITTERS in healing the sick of every disease man is heir to. They are a gentle Purgative as well as a Tonic, relieving Congestion or Inflammation of the Liver and Visceral Organs in Bilious Diseases blood purifier and a life-giving principle,

The properties of Dr. WALKER'S VINEGAR BITTERS are Aperient, Diaphoretic, Carminative, Nutritious, Laxative, Diuretic, Sedative, Counter-Irritant Sudorific, Altera-tive, and Anti-Billous. Grateful Thousands proclaim VIN-EGAR BITTERS the most wonderful Invigorant that ever sustained the sinking

No Person can take these Bitters according to directions, and remain long unwell, provided their bones are not de-stroyed by mineral poison or other neans, and vital organs wasted beyond Bilious, Remittent and Inter-

mittent Fevers, which are so prevathroughout the United States, especially those of the Mississippi, Ohio, Missouri, Illinois, Tennessee, Camberland, Arkansas, Red, Colorado, Brazos, Rio Grande, Pearl, Alabama, Mobile, Savannah, Ro-anoke, James, and many others, with their vast tributaries, throughout our entire country during the Summer and Autumn, and remarkably so during seasons of unusual heat and dryness, are invariably accompanied by extensive de-rangements of the stomach and liver, and other abdominal viscera. In their treatment, a purgative, exerting a powerful influence upon these various organs, is essentially necessary. There is no cathartic for the purpose equal to DR. J. WALKER'S VINEGAR BITTERS, as they will speedily remove the dark-colored viscid matter with which the bowels are loaded, at the same time stimulating the secretions of the liver, and generally restoring the healthy nctions of the digestive organs. Fortify the body against disease

by parifying all its fluids with VINEGAR BITTERS. No epidemic can take hold of a system thus fore-armed. Dyspepsia or Indigestion, Headache. Pain in the Shoulders, Coughs, Tightness of the Chest, Dizziness, Sour Eructations of the Stomach, Bad Taste in the Mouth, Bilious Attacks, Palpitatation of the Heart, Inflammation of the Lungs, Pain in the region of the Kid neys, and a hundred other painful symptoms, are the offsprings of Dyspepsia. One bottle will prove a better guarantee of its merits than a lengthy advertise-

Scrofula, or King's Evil, White Setfoldia, Of Killes Byll, White Swellings, Ulcers, Erysjpelas, Swelled Neck, Goitre, Screfulous Inflammations, Indolent Inflammations, Mercurial Affections, Old Sores, Ereptions of the Skin, Sore Eyes, etc. In these, as in all other constitutional Dis-cases, Walkier's Vinegan Byrriess have shown their great curative powers in the most obstinate and intractable cases.

For Inflammatory and Chronic Rheumatism, Gout, Bilious, Remittent and Intermittent Fevers, Diseases of tent and Intermittent Tevers, Diseases of the Blood, Liver, Kidneys and Bladder, these Bitters have no equal. Such Diseases are caused by Vitiated Blood. Mechanical Diseases, — Persons en-gaged in Paints and Minerals, such as

Plumbers, Type-setters, Gold beaters, and Miners, as they advance in life, are subject to panalysis of the Bowels. To guard against this, take a doce of WALKERS VINTEGAR BITTERS occasionally.

For Skin Diseases, Eruptions, Tet-FOURTH DISCUSSES, ETUPLOUS, Feer, Salt-Eheum, Blotches, Spots, Pimples, Pustules, Boils, Carbuncles, Ring-worms, Scald-head, Sore Eyes, Erysipelas, Itch, Semfs, Discolorations of the Skin, Humors and Discusses of the Skin of whatever name or nature, are literally dug up and carried out of the system in a short time by the use of these Bitters.

Pin, Tape, and other Worms, lurking in the system of so many thousands, are effectually destroyed and removed. No system of medicine, no vermifuges, no an-thelminities will free the system from worms like these Bitters.

For Female Complaints, in young

or old, married or single, at the dawn of wo-manhood, or the turn of life, these Tonic Bitters display so decided an influence that improvement is soon perceptible.

Cleanse the Vitlated Blood whenever you find its impurities bursting through the skin in Pimples, Eruptions, or Sores; cleanse it when you find it obstructed and

cleanse it when you find it obstructed and shurgish in the veins; cleanse it when it is foul; your feelings will tell you when. Keep the blood pure, and the health of the system will follow.

## RECEIPTS AND DISBURSEMENTS

Board of School Commissioners of Cecil County, FOR THE YEAR 1872-3.

The School Commissioners of Cecil county would report that the schools of our county have been kept open during nine months of the past year. As regards their efficient working, they have not declined; on the contrary, we think that they have advanced in this respect. Several new School Districts have been created, by the duvision of old ones, in order more fully to meet the wants of the pupils. Such is now the condition of the various School Districts, that there will be no necessity for much change in the future.

The teachers of the Schools seem to be carnest and diligent in their work; and by means of Teachers Associations, and a free interchange of views in reference to their work, are qualifying themselves for a more thorough discharge of their duties. We think the institute held under the supervision of the President of the State Normal School, in March of the past year, has had a good influence over the teachers in glying a fresh impulse to their minds, and by giving more enlightened views of their duties and responsibilities.

We have built, during the year, four new school houses, and greatly altered and repaired several others; so that with a few more new houses the whole county will be supplied. It should be stated that all the houses are built in the best manner, after a credule examination of various plans, and in accordance with the wants of the districts in which they are built. It will be seen by the Annual Report, that the Colored Schools of the county are placed upon this string that the teachers of these schools shall be fully connectent for the School Board insisting that the teachers of these schools shall be fully connectent for there work.

The present School law is working well, and doing an efficient work in our county for the education of the young, and qualifying them for the active duties of life.

A CERTAIN CURE FOR

Dyspepsia, Liver
Complaint, Jaundice, Billiousness, Sick Headache, and Hab-itual Costiveness.

What is Life without the enjoyment of health? If you had the wealth of Creens, and afflicted with hysperies, or lit kindred diseases, you could not enjoy life. Dyspepsia is a prevalent disease in the United States, borangli about 14 vour halits and irregularities. The Materia Melical has been exhausted to find a renedy, and the skill of the most learned Physicians has failed to effect a cure. Notwithstanding this delaration, we annewitatingly war: "MILLER'S DYSPEPSIN" is a certain cure for Byspepsian and the many complaints mellent thereto. It has been before the public as millioning the complaints mellent thereto. It has been before the public as millioning that the control length of time to fully test its meitis, and in every instance where it has been used according to directions, it has resulted in giving relief and effecting a cure. With each bottle is a Circular describing the symptoms of the diseases named, and for which only we claim it as a specific. Against it a fair trial, and rest assured you will be benefited.
