

The Farm

BREEDING HOGS.

In the selection of a boar and sow for breeding, much more attention and consideration should be given to the quality of the blood than to the quantity of the carcass.

The object of the farmer or breeder is to produce and retain such an animal as will be best adapted to the purpose he has in view, whether that be the consumption of certain tissues which could not otherwise be so well disposed of, the converting into hams, bacon, and pork, or the raising of sucking pigs and porkers for the market.

Almost all farmers keep one or more pigs to devour the offal and refuse, which would otherwise be wasted. This is, however, a matter totally distinct from breeding swine. In the former case, the animal or animals are purchased young for a small price, each person buying as many as he considers he shall have food enough for, and then sold to the butcher, or killed, when in proper condition; and thus a certain degree of profit is realized.

In the many contingencies which may arise, the farmer should have available means of feeding them; whether or not the food may be more profitably disposed of, the facilities afforded by railroads, the vicinity of towns, or large markets, etc., for disposing of them.

In the breeding of swine, as much as that of any other live stock, it is important to pay great attention not only to the quality of the blood, but also to the choice of individuals. The sow should produce a great number of young ones, and she must be well fed to enable her to support them. Some sows bring forth ten, twelve, or even fifteen pigs at a birth; but eight or nine is the usual number; and sows which produce fewer than this must be rejected.

It is an important point for a farmer to ascertain which of his crops requires the richest land to produce a maximum growth; and it is often still more important for him to determine to what crop he had better apply his manure. If a farmer had all the manure he needed to enable the soil to produce the maximum crop, he must first determine the best way of organizing the first question, but such is seldom the case, and we have often to ask ourselves which crop is the best to plant on the richer and which on the poorer fields.

Mangel-wurzel, carrots, onions, and rutabagas must have rich land to produce a maximum crop. So must Indian corn. Barley requires richer land than winter wheat. But this does not tell the whole story. As a rule, those crops which require the most labor in planting, cultivating, hoeing, and harvesting, should be sown on the richest land. To spend as much labor and manure in preparing a field for a crop as to yield a maximum crop, is manifestly absurd. If the season is capable of producing 300 bushels of potatoes per acre, we should aim to bring the soil up to this degree of productivity, because a potato crop requires a good deal of labor, and it is nearly as much for a small crop as for a large one. For instance: Take two adjoining acres, one rich enough to produce 300 bushels per acre, and the other only capable of producing 100 bushels; the expenses and receipts would be somewhat as follows:

Table with 3 columns: Acre No. 1, Acre No. 2, Profit per acre. Rows include Plowing, harrow, etc., Seed, cutting, and planting, Cultivating, Digging, Hauling to market, Interest on land, Crop, Profit per acre.

Now take two adjoining acres of soil, one of which is without manure will produce 15 bushels per acre, and the other with manure 20 bushels per acre. The account would stand about as follows:

Table with 3 columns: Acre No. 1, Acre No. 2, Profit per acre. Rows include Plowing, etc., Seed, cutting, and planting, Cultivating, Digging, Hauling to market, Interest on land, Crop, Profit per acre.

THE VEGETABLE GARDEN. The hardy vegetables may be sown as soon as the ground is dry enough, including in this department Beets, Carrots, Cabbages, Lettuce, Cauliflowers, Turnips, Parsley, Peas, Radishes and Turnips, while the more delicate kinds should not be sown before the weather is settled and the sun warms up the ground.

valuable. A light, rich, sandy loam, is best suited to them. An advantage, and deep and constant tillage a necessity. The seed is sown in drills 16 to 20 inches apart, and plants should be thinned to 6 inches before sowing it is mixed with sand and shaken well on rubbed between the hands, the seed will separate easily. If with them some radish seed is mixed, they will germinate quickly and show the row before the carrots sprout, thus enabling them to be worked before the latter are out of the ground. Carrots should be sown a little later than the root named above, it being better to wait till the ground is warm.

Parsnips—These roots are nutritious and are very much esteemed for the table, besides being useful for feeding cows and swine. They succeed best in the same soil as carrots and require the same general treatment. The rows may be about 20 inches apart and the roots stand every 6 to 8 inches. Keep the ground deep.

CHICKS FOR STORES.—We recommend every one to try even a small patch of fowling ground. We are sure that its advantages will make themselves so apparent when the pastures fall, that all who try it will henceforth sow a moderate patch, that we only ask a moderate planting. Nothing is more useful in the hottest part of the summer for the poultry than to have the ground in the former kept up their food of milk without decrease, especially if a little meal and bran be given in conjunction with it. Sow in drills two and a half to three feet apart, and run the cultivator through the rows two or three times. The land ought to be rich. About 3 bushels of seed to the acre is the best quantity. It may be sown up to the first of August, and cut when it is shedding the pollen freely. If to be sown in winter, early sowing is best.

SOILING PLASTER on clover fields should be attended to now at once. From one to two bushels to the acre is sufficient.

Crops that require Rich Land. It is an important point for a farmer to ascertain which of his crops requires the richest land to produce a maximum growth; and it is often still more important for him to determine to what crop he had better apply his manure.

It is an important point for a farmer to ascertain which of his crops requires the richest land to produce a maximum growth; and it is often still more important for him to determine to what crop he had better apply his manure.

quickly than a loose one, and the latter the soil is so much greater will be the evaporation from it. So that the hard soil is deprived of its moisture much sooner than one of a loose texture. The soil that has been kept loose near the surface by the action of the hoe, will receive and hold the rain-water that falls, while a hard soil will allow most of it to run off into the valleys and streams as it falls.

KEARNEY'S FLUID EXTRACT BUCHU!

The only known remedy for BRIGHT'S DISEASE, And a positive remedy for Gout, Gravel, Strictures, Diabetes, Dyspepsia, Nervous Debility, Dropsy, Non-retention, or Incontinence of Urine, Irritation, Inflammation or Obstruction of the Bladder & Kidneys, SPERMATORRHOEA, Leucorrhoea or Whites, Discharge of the Prostate, Hemorrhoids, Stricture, Catarrh of the Bladder, Catarrh of the Uterus or of the Vagina, and all other Urinary Affections.

KEARNEY'S EXTRACT BUCHU Primarily Cures all Diseases of the Bladder, Kidneys, and Dropsical Swellings, Existing in Men, Women and Children.

TO THE Nervous and Debilitated OF BOTH SEXES. No Charge for Advice and Consultation.

DR. J. W. KENNEDY, HOMEOPATHIC PHYSICIAN, OFFERS HIS PROFESSIONAL SERVICES TO THE CITIZENS OF ELKTON AND VICINITY. OFFICE—Opposite Presbyterian Church, N. 10th St., Elkton, Md.

W. T. WARBURTON, JR., ATTORNEY AT LAW, ELKTON, MD. OFFICE—With Reuben Haines, on Main Street, April 4, 1874—2m

J. B. JONES, L. MARSHALL HAINES, JONES & HAINES, ATTORNEYS AT LAW, ELKTON, MD. OFFICE—On Main Street, opposite the Court House, May 2, 1874—1m

DR. J. R. JEFFERIES, DENTIST, (OF FAIR HILL, CECL COUNTY, MARYLAND.) Would respectfully inform the citizens of ZION and vicinity, that he will visit Elkton, on the 10th inst., for the practice of his profession. Office—Main Street, opposite the Court House, May 2, 1874—1m

DR. J. B. JONES, DENTIST, (OF FAIR HILL, CECL COUNTY, MARYLAND.) Would respectfully inform the citizens of ZION and vicinity, that he will visit Elkton, on the 10th inst., for the practice of his profession. Office—Main Street, opposite the Court House, May 2, 1874—1m
