THE "BLACK HAWK" MANURE SPREADER

is simple in construction, and easy to operate. The wide spread attachment enables the farmer to spread a width of 74 feet. This spreader is easy to load because it is low-down.

Anyone who is in the market for a spreader cannot afford to lose the opportunity of examining the "Black Hawk" before placing his order elsewhere.

****** SAVE CRIMSON CLOVER SSED.

War has cut off our greatest supply of crimson clover seed. We have depended upon Europe to the past because we have not been able to harvest the seed economically. This valuable soli improver is a winter annual and must be reseeded in late summer each year. The purchase of seed on the local markets comes at a time when money and credit are scarce on the farm. Now the government has found a good seed harvester. It has

been tested and has proved i seif efficient. A small hand barvester can be made by any farmer for one dollar it consists merely of a series of wooden fingers about ten inches long at the bottom of a box to hold the stripped seed. Larger types are made on iden-

tically the same plan. Save your crimson clover seed now! There is no telling what the supply will be next summer. Remember that it is better now it in the buil than clean tweive to fifteen bushels of well packed seed in the buil. Don't

constitions as where moisture is over abundant and apple trees make too buxuriant growth, sed may occasional-

ly be used with benefit to check growth and promete fruitfulness. There is however, nothing to indi resots and tree roots ever establish amicable relations, for the difference tetween the tilled and sedded plats was greater at the end of ten years than during the first half of the test that is, apples do not become adapted

The bad effects of the grass on apple trees occur, no matter what the variety or the age of the tree or other cultural treatment, and are even more Bable to be shown by dwarfs than by standard trees because of the shallow root systems of the trees on dwarf stocks. Pasturing orchards in sed may reduce the injury from the grass just to the extent that the pasturing reduces the growth of the grass, but it can never wholly overcome the evil The owners of sod orchards may not a distance, signs of poor bealth and diminished vitality in the light color

The sed mulch system is bad enough. but grass grown in the orchard not for a mulch to all but fatal. It makes the trees sterile and paralyzes their
