Dr. E. J. Everybody is cordially invited to attend and benefit their intelligences by listening to a fair and candid exposition of the political situation. By Order of

#### A Freak of Nature.

Quite a furore, not only in medical and surgical circles, but even in the untechnical world, was created upon the ceath of those monstrosities, the Siamese twins, about two years ago. The sensation may be said to have centred in this city, although the extraordinary couple died in the far South. This was caused by the fact that Professor William II. Pancoast, the well-known surgeon and professor in the Jefferson College here, was smart enough to see the advantage to the medical schools of this city which would follow upon having the autopsy made before the College of Physicians in Philadelphia.

He and one or two other physicians obtained possession of the bodies, brought them here, examined them, and, as a consequence, quite a learned set of papers day. Professor Pancoast had previously examined the Carolina twins, and there-"expert" in "teratology," as the science of this kind of monstrosity is called.
