A VETERAN'S VERDICT.

The War is Over. A Well-known Sok dier, Correspondent and Journalist Makes a Disclosure.

Indiana contributed her thousands of brave soldiers to the war, and no state bears a better record in that respect than it does. In diterature it is rapidly acquiring an enviable place. In war and literature solomon Yewell, well known as a writer as "Sol," has won an honorable position. During the late war he was a member of Co. M. 2d. N. Y. Cavalry and of the 15th Indiana Infantry Volunteers. Regarding an important circumstance he writes as follows:

"Several of us old veterans here are using Dr. Miles' Restorative Nervine. Heart Cure and Norve and Liver Pills, all of them giving splendid satisfaction. In fact, we have never used remedies that compare with them. Of the Pills we must say they are the best combination of their nature we have ever known. We have none but words of praise for them. They are the outgrowth of a new principle in medicine, and tone up the system wonderfully. We say to all, try these remedies,"—Solomon Yewell, Marion, Ind., Dec. 5, 1812.

These remedies are sold by all druggists on a positive guarantee, or sent direct by the Dr. Miles Medical Co., Elkhart, Ind., on receipt of price, \$1 per bottle, six bottles \$5, express prepaid. They positively contain neither opiates nor dangerous drugs.

AMERICA'S MOST DEADLY SNAKE IS THE PICHU-CUATE.

It Is Found In the Southwest-Even Snake Charmers Are Afraid of It-A Tiny Thing, but It Kills Very Quickly—A Writer Tells of His First Meeting With One.

The southwest is more liberally supplied with venomous things than any other area in the Union. In the burning deserts, in the inhabited but arid expanses of New Mexico and Arizona, the rattlesnake abounds, and in several varieties, including the strange and deadly "sidewinder," Crotolus cerastes. The so called tarantula—really only a gigantic bush spider, but none the less dangerous because of the misnomer—is decidedly common. Scorpions are none too rare in the southern portions of the territories, and in all parts centipeds of 7 to 8 inches long are frequent and neighborly. But the chief distinction of the region in this respect is the pres-

ence of the pichu-cuate, the deadliest snake in North America. The picha-cuate matches the worst serpent of India. Not only the most highly venomous, but the tiniest and most treacherous, he would be also the rarest. He is the only true asp on this continent, and in the United States is never found outside of New Mexico and Arizona. That he was also known to the ancient Mexicans is apparent from his name-pichu-coatl, an Aztee word, which was brought up to our territory by the Spanish conquerors.

My first meeting with one was in Valencia county, N. M., in June, 1890, on the sandy flanks of the Cerro del Aire. I was out hunting jack rabbits, in company with some Indian friends, and had dismounted to stalk, leading my pet horse by the bridle. My eyes were on a small chapparo bush ahead, when suddenly Alazan snorted and reared backward so violently as almost to unhinge my arm. I looked about in surprise, for Alazan was too good a horse to mind trifles. As there was nothing to be seen, I started to pull him forward. Again he protested and with evident terror, and chancing to look at my very feet I understood his fear and felt very grateful that his senses were better than mine, for in another step I should

have walked upon my death. The only thing visible was a tiny object, not nearly so large as a good stag beetle-merely a head and perhaps an inch of neck. But it was the most frightful object in its kind that I had ever seen. The head, certainly neither so broad nor so long as my thumb nail, had a shape and an air of condensed malignity impossible to describe. It seemed the very essence of wickedness and hate, fairly bulging with deadly spite, and growing upon one until it looked several times its actual size. The ugly triangle (which is the distinguishing mark of all venomous snakes, being formed by the poison gland back of each eye) told me at once that Ala-Our facilities for mixing wheat are zan was keeping up his reputation and the tiny horns, which added a culiar and grotesque hideousness, left no doubt that this was a pichu-cuate. He had buried himself most to the head in the gray sand, against which his upper skin was barely distinguishable, and thus in ambush was waiting for some-

thing to turn up. Turning Alazan loose, I knelt at the safe distance of a yard to study the little creature, which fairly swelled with murderous rage. It not only struck madly at the chapparo switch I thrust to it, but at last, evidently discerning that the blame lay back of the switch, actually followed it up, and with such agility that I had to jump up and back without less of time. The idea of retreat never seemed to enter that flat head. Sometimes he would lie and puff out with impotent rage, throwing his WINES, WHISKIES, BRANDIES, GIRS, | one with impotent rage, throwing his will mouth so wide open that it seemed the venom must start, and sometimes he glided toward me, his head an inch above the ground, with an attitude which seemed to say, "Stand still there,

and we'll see who laughs." At last I killed him. He was neither larger round nor longer than an ordinary lead pencil; a cold, leaden gray on the back, but underneath rosy as the mouth of a conch shell. The fangs were tiny, not much more than an eighth of an inch long, and as delicate as the tiniest needle. A wondrous mechanism, this mouth, with its two automatic needles, so infinitesimal, yet so perfectly competent. I opened the ugly little jaws wide, pressing upon the sides of the head, and when the recurving fangs had risen from their grooves in the roof of the mouth and stood tenso a stream so inconceivably fine that the eye could barely note it spurted from each, and in the space of two or three inches melted into invisible spray. Yet that jet, finer than a cobweb strand, was enough to give

swift death to the largest and strongest animal that walks. When the hunt was over, I told my Indian chums of the pichu-cuate and asked them many questions. They all knew of the snake, though several had never seen one, and all agreed that it is extremely rare. The crotalus ranks among the Pueblo divinities, and their charmers have no difficuty with that steady going and respectable reptile. But even among these people, with whom the cult of the rattlesnake has such astounding features and where until recent years every Pueblo kept a saered rattlesnake in a sacred room, with special priests to attend him, the villainous little sand viper is accursed. snake" can do nothing with him. He scorns to be tamed even by the dropping upon his head of the mystic pollen of the corn blossom.—C. F. Lummis in New York Sun.

One Child's Vocabulary. The statement that a child 51 years o age would not have more than 150 words in its vocabulary that it was able to use understandingly led a careful mother to note for a month the number of words used by her child. All the parts of speech used were recorded, with the result that in this case the child appeared to have a vecabulary of 1,528 words.-New York Post.

At the winter palace, St. Petersburg, there is a room full of diamonds, pearls and other precious stones. The empress of Russia is allowed to borrow from this pony after giving a receipt for what she takes, and generally the grand duchesses are allowed to borrow from it also.

Jewelers are fervently wishing that the styles prevalent in France in the tenth century might be revived for the sake of business. Judith, the wife of Caipuchin, wore a solid girdle of gold that weighed four pounds, and all the fashionable dames followed her example, Hoopskirts, which came into vogue in

the year 1530, weighed between 50 and 46

pounds, but it was the "fashion," and

they were lugged about by the belles of the period despite the discomfort. Professor Karl Pearson pronounces the Monte Carlo rouletto wheel, as viewed from the standard of exact science, "the most prodigious miracle of the century." Deep Sea Thermometer.

The deep sea thermometer, as invented abroad and improved by officers of the United States mayy, is a marvelously inenious and effective contrivance. It is in effect a self registering instrument, though not technically so called. The thermometer is so arranged that it is automatically turned upside down when the machinery begins to draw it up from the depth at which the temperature is to be ascertained. The effect of the inverting process is to break the column of mercury, and a small portion of the column remains in the upper end of the tube, exactly enough to measure the temperature at the moment of inversion. The tube is graduated so as to read from either end, and the quantity of mercury in the upper part of the tube is so small that it does not respond to any but great and sudden changes of temperature. It thus happens that the reading, when the thermometer reaches the surface, is practically correct for the temperature at the point of inversion.-Kansas City Times.

Especially in those women who are always at work upon public opinien by letters, specches and writings does opposition to woman suffrage seem selfish and narrow. They exercise the largest liberty of affecting the public for themmost dangerous—but, luckily, he is the solves, but they would deny to the masses of women even the secret ballot. -Boston Transcript.

> A Thorough Test. A very wise man once said that when he began to feel too important he got a map of the universe and tried to find himself on it.

PIERCE CORE. kinds of medicine, but the "Discovery," from the day I commenced until I was well, cost only FOUR DOLLARS.

Accept my gratitude, and I beg to subscribe myself.

PATAPSCO FLOUR. ROLOSON BROS ONE HUNDRED and TWENTIETH YEAR THE "ROCKISLAND" COMBINED HAY RAKE & LOADER

Why are there twice as many Rock Island Hay Rakes and loaders in the ands of the best farmers as of all others added together? I wish to state that I used a Rock Island

Because, they do the best work, The most of it,

And draw the lightest, They leave the ground the cleanest, Injure the hay the least, and

Put it on the wagon in the best shape They work everywhere, Under any condition,

And very seldom break down. They will out wear any two Other machines on the market. We can prove what we say, not by

One, but by thousands.

In wish to state that I used a Rock Island Hay loader last harvest and can say to my brother farmers with a good conscience that it will do all it is represented to do by the circulars of the company. Two of us put about 150 tons of hay without a break or baying to stop five minutes on account of loader. WILLIAM LEASE. The Rock Island Hay Loader proved to be a very happy as well as profitable inve-tment for me, as I never before made hay with as little expense or labor. I would not think of doing without one. I loaded twelve large loads of hay in four hours, and could have loaded more if I could have unloaded it faster at the barns.

Al approve Ma. One 21 1862 ALBERTON, MD., Oct. 21, 1893. In reply to your inquiry as to how I am pleased with the "Rock Island" Hay Loader I bought of you? It is perfectly satisfactory in every respect and does all you claimed for it; in fact I am so well pleased with it that \$200 dollars would not buy it if I could not get another.

AUGUST D. STIRN. Валлімоне, Мр., Ост. 21, 1893. The Rock Island Hay Loader purchased of you this year has given entire satisfaction; and I heartily indorse it as the Hay Loader, E. A. BLACKSHERE,

The Rock Island Hay Loader makes 1,700 Strokes per mile, other loaders make 4,500, and the wear to the machine and damage to the hay is just in proportion, as compared with the relative speed.

ROLOSON BROS.
