THE CATTLE DISEASE IN ENGLAND. ported have been more or less "intected" has been perfectly free from any symptoms owing to a timely and proper precaution,

a great deal has been effected in securing the cowkeepers from any loss. Net only has the corporation been active in matter by the appointment of certified of-| Scials, but private individuals, who im port large numbers of foreign beasts, especially from the Spanish ports, have also the stock as it comes ashere.

These measures have been attended with great success, and cattle which have i been found enfeebled by disease have been lat once disposed of and not allowed to communicate with the more healthy stock .-In regard to the cattle imported into Liverpool from Ireland a most remarkable and antisfactory feature is noticeable. In Ire land the stock this year is one of the healthiest ever known; all kin is of pleuro preumonia have disappeared; and this, with the rigid surveillance exercised by the British cattle dealers in the selection of their marketable stock, shows that the rinderpest can be, if proper measures are taken, confined within the place in which it first makes its appearance.
