

T-538

NELLIE L. BYRD (skipjack)  
Tilghman, Maryland

NELLIE L. BYRD is a 53.6' long two-sail bateau, or V-bottomed deadrise type of centerboard sloop, commonly referred to as a skipjack. She has a beam of 26.7', a depth of 4.8', and a net registered tonnage of 18. She carries a typical skipjack rig of jib-headed mainsail and a single large jib with a club on its foot. Built in 1911 in Oriole, Maryland following traditional Bay design and construction methods, NELLIE L. BYRD is significant as being one of the 35 surviving traditional Chesapeake Bay skipjacks and a member of the last commercial sailing fleet in the United States. NELLIE L. BYRD is of special interest as being one of the older skipjacks in the fleet and for being one of the 19 surviving working skipjacks to have been built previous to 1912.

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This vessel is a 53.6-foot long, two-sail bateau, or V-bottomed deadrise type of centerboard sloop, commonly referred to as a "skipjack." Built in Oriole, Maryland in 1911 for the oyster dredging fleet, she is Bay-built using cross-planked construction methods. She has a beam of 26.7 feet, a depth of 4.8 feet, and a net tonnage of 18 tons. She carries a typical skipjack rig with a jib-headed mainsail laced to the boom and carried on wood hoops at the mast, and a single large jib with a club on its foot. The hull is painted the traditional white.

The vessel has a longhead bow with a slightly raking stem and a wide, square transom stern with considerable rake. The stern shows a long, shallow tuck where the chine meets the transom. The vessel is particularly wide amidships, giving her generous work space on deck. The rudder is carried outboard on pintles mounted on the transom and skeg; the jib for the pushboat is set on the starboard side of the transom. The hull has heavy ice sheathing carried well above the waterline.

The boat is flush-decked. From the stern forward deck structures include: a box over the steering gear; a cabin with a slide offset to port; a small hatch; a box over the winders; a main hatch; and a medium-sized cuddy with a slide, located just aft of the mast. There is a low taffrail surrounding the deck, higher at the stern. The pipes of the rail and the davits for the pushboat are painted white.

The single mast is well-raked aft, about 15° to 20°, and is set up with double shrouds and turnbuckles. There are also a forestay, jibstay, topping lift, and lazyjacks. The boom is jawed to the mast; both mast and boom are natural oiled wood. The bowsprit is hexagonal, round at its end. It is set up with one chain and one cable bobstay, and two chain bowsprit shrouds. The boom is set high and is patched with metal strips. The pushboat is carried on pipe davits over the stern.

Decorations include trailboards mounted on the longhead, with the name NELLIE L. BYRD in gold on a green field with a red surround, and eagle, flag, and arrow motifs. On the nameboards at the bow, the name is painted red on a black ground. There is a painted eagle billet-head on the longhead.

# 8. Significance

Level of Significance:	<input checked="" type="checkbox"/> national	<input type="checkbox"/> state	<input type="checkbox"/> local

Prepare both a summary paragraph of significance and a general statement of history and support.

This vessel is significant as being one of the 35 surviving traditional Chesapeake Bay skipjacks and a member of the last commercial sailing fleet in the United States. Out of a fleet of hundreds of skipjacks that worked Bay waters in the early years of this century, today only this small number remain to carry on the tradition of working sail.

The skipjack evolved as a distinct type of Bay vessel in the 1890's as a cheaper-to-construct alternative to the earlier bugeyes and other traditional framed craft, in a period when shipbuilding costs were rising and the oyster catch was diminishing. The type was devised by enlarging (to 25 to 60 feet) the hull of the ordinary, unframed, square-sterned Bay crabbing skiff, and giving it a deadrise bottom, a-deck, a cabin, and a sloop rig. The result--with its unframed, hard chine, cross-planked, V-bottom--proved inexpensive to build, easy to repair, and could be constructed by a competent house carpenter. Skipjacks were specifically designed as oyster dredge boats, with wide beams and low freeboard lending stability and providing a large working space on deck. The single masted rig, with sharp-headed mainsail and large jib, was easy to handle, powerful in light winds, and handy in coming about quickly for another pass over the oyster beds.

The Maryland oyster season begins November 1 and ends March 15. Skipjacks must dredge under sail on all days except Mondays and Tuesdays, when they are allowed to use their motorized pushboat for dredging. The pushboat, normally carried on davits at the stern, is lowered into the water and literally "pushes" the skipjack along from behind, the nose of the pushboat resting against a "jig" on the stern of the skipjack. The pushboat can also legally be used to get the skipjack to and from the oyster beds each day. Each skipjack's crew is made up of the captain, who is often also the owner, and five crew members.

NELLIE BYRD is of interest as being one of the older skipjacks still dredging in the Chesapeake fleet. She was built in 1911 in Oriole, Maryland following traditional Bay-area design and construction methods. She has worked in the oyster-dredging fleet since her building. For many years NELLIE BYRD was owned by Capt. William Todd of Cambridge and, at 53 1/2' long, was the largest skipjack in Dorchester Co. A trio of skipjacks, owned and skippered by the Todd family, was for many years based in Cambridge. Capt. William Todd's brother Wilson owned the SALLY BRAMBLE and his brother Emerson, the REBECCA T. RUARK, also sold to Tilghman in 1983-84.
